<sup>1</sup>Comparative figures for the years 1908-24 are given in the Canada Year Book, 1929, pp. 230-232. The total value of wheat for 1912 should be \$139,090,000 instead of the \$19,090,000 shown on p. 230 of the 1929 Year Book, the error being due to the dropping out of a figure. <sup>2</sup>Revised since the publication of the 1933 Year Book.

**Total Acreages and Values, 1929-1934.**—Table 4 shows for Canada and the provinces, for the last six years, the total estimated areas and values of field crops, Table 5 the field crops of Canada compared as to quantity and value for 1933 and 1934, and Table 6 the areas, yields and values of the principal field crops in Canada, by provinces, for the years 1933 and 1934.

| Ontario.....          | 3,000,172        | 3,134,614        | 3,149,460        | 3,031,717        | 3,012,500        | 2,995,500        | 2,908,300        |
| Manitoba.....         | 252,689          | 253,950          | 264,300          | 239,800          | 232,100          | 246,700          | 232,200          |
| Saskatchewan.....     | 408,670          | 406,100          | 419,000          | 400,300          | 444,900          | 451,600          | 453,900          |
| Alberta.....          | 289,973          | 319,338          | 306,400          | 384,900          | 350,500          | 220,000          | 261,800          |
| British Columbia..... | 62,192           | 63,865           | 66,604           | 69,272           | 76,500           | 80,200           | 86,500           |
| Indian Reserves.....  | 39,202           | 47,237           | 39,839           | 39,913           | 46,000           | 49,200           | 42,200           |
| <b>Totals.....</b>    | <b>9,528,043</b> | <b>9,768,320</b> | <b>9,889,513</b> | <b>9,428,102</b> | <b>8,264,700</b> | <b>8,317,000</b> | <b>8,353,400</b> |

The foregoing figures are not entirely comprehensive since the figures for the Maritime Provinces, Quebec and Ontario include all pasture, seeded and natural, while the figures for the four western provinces are "seeded pasture" only. Most of the area used for pasture in these provinces is "natural" and data on land used in this way can only be properly secured at the quinquennial census. At the Census of 1931, the acreages of improved and natural pasture in the three Prairie Provinces were as follows:—

| Province.         | Improved Pasture. | Natural Pasture. |
|-------------------|-------------------|------------------|
|                   | acres.            | acres.           |
| Manitoba.....     | 411,924           | 3,601,644        |
| Saskatchewan..... | 712,371           | 15,755,179       |
| Alberta.....      | 524,586           | 15,960,335       |

The areas under grazing leases in the Western Provinces as at Mar. 31, 1932-34, are reported by the provincial lands administration branches as follows:—

| Province.             | 1932.             |           | 1933.             |                        | 1934.             |           |
|-----------------------|-------------------|-----------|-------------------|------------------------|-------------------|-----------|
|                       | Number of Leases. | Acres.    | Number of Leases. | Acres.                 | Number of Leases. | Acres.    |
| Manitoba.....         | 245               | 103,314   | 239               | 132,111                | 217               | 126,314   |
| Saskatchewan.....     | 6,923             | 3,731,668 | 5,910             | 4,539,350 <sup>1</sup> | 7,555             | 4,228,830 |
| Alberta.....          | 3,948             | 3,367,150 | 3,708             | 3,172,839              | 3,775             | 3,186,838 |
| British Columbia..... | 732               | 64,153    | 777               | 73,771                 | 875               | 100,291   |
| Totals.....           | 11,848            | 7,266,285 | 10,634            | 7,918,071              | 12,422            | 7,642,273 |

<sup>1</sup> Includes provincial forests and school lands grazing permits covering 742,920 acres for which the numbers of leases are not known.

**Average Yields per Acre.**—Table 8 gives, for the years 1927 to 1934, the average yields per acre of the various field crops, together with the long-time average yields per acre.

#### 8.—Annual Average Yields per Acre of Field Crops for Canada, 1927-34, with Long-Time Averages.

<sup>1</sup>Revised since the publication of the 1933 Year Book.

**Distribution of Wheat and Oat Crops.**—The distribution of the wheat crop of Canada for the years ended July 31, 1933 and 1934, is calculated in Table 12.

## 12.—Distribution of the Canadian Wheat Crops, by crop years, 1932-33 and 1933-34.

**NOTE.**—Flour is expressed as wheat on the basis of one barrel of flour, weighing 196 lb., being equal to  $4\frac{1}{2}$  bushels of wheat. For similar calculations extending over a series of years both for wheat and oats, see the Year Book, 1920, pp. 263-266, and the April issues of the Monthly Bulletin of Agricultural Statistics for each of the years 1920 to 1933.

Table 13 presents similar data for oats. The bulk of this crop is consumed as feed for live stock and the table shows approximately how the remaining portion of the crop is disposed of, including: the quantities exported as grain, oatmeal and rolled oats; the quantity retained for seed; and the quantity milled for home consumption, representing chiefly oatmeal and rolled oats used for human food. The carry-over represents grain in the elevators, in farmers' hands, in transit, etc., and the balance is the quantity used in Canada for feeding to live stock, this amount being estimated at 317,442,000 bushels in 1932-33 and 260,531,000 bushels in 1933-34.

**Per Capita Consumption of Wheat in Canada.**—According to revised calculations, the average per capita consumption of wheat ground for human food in Canada during the ten years 1924 to 1933 was 4.3 bushels. The average range for the period was between 4.0 and 4.5 bushels. The average consumption in 1933 was estimated at 4.1 bushels. Details for the years 1919-27 were given at p. 241 of the 1929 Year Book, while annual estimates are published in the April number of the Monthly Bulletin of Agricultural Statistics.

**Subsection 3.—Farm Live Stock and Poultry.**

The growth of the live-stock and poultry industries in Canada from decade to decade is indicated in summary statistical form in Table 14, while some authoritative details will be found in the article "The Development of Agriculture in Canada", contributed by Dr. J. H. Grisdale to the 1921 Year Book, where it appears at pp. 202-210.

**Production and Value of Wool.**—The production of wool in Canada is placed at 19,544,000 lb. from 3,423,951 sheep and lambs in 1934 as compared with 19,268,000 lb. from 3,388,552 sheep and lambs in 1933. Table 18 gives the total estimated production and value of wool for the years 1915 to 1934.

#### Subsection 4.—Dairying Statistics.

As the Agricultural Statistics Branch of the Dominion Bureau of Statistics was engaged in a revision of the dairying statistics of Canada at the time that this chapter of the Year Book was going to press, it was decided to transfer this subsection to Appendix II. (For page reference see Index.)

#### Subsection 5.—Fur Farming.\*

**Origin of Fur-Farming Industry.**—A short account of the origin of the fur-farming industry in Canada was given on p. 249 of the 1929 edition of the Year Book. A fuller description of the rise of the industry in Prince Edward Island, its original home, was given in the Census and Statistics Monthly for May, 1914, at p. 110, while a still more detailed account of the earlier history of the industry was given in a publication of the Commission of Conservation, Ottawa, entitled "Fur Farming in Canada", by J. Walter Jones, B.A., B.S.A., the second edition of which was published in 1914.

**Fur Farms of Canada.**—The term "fur farm" includes farms devoted entirely to the raising of fur-bearing animals (principally silver foxes), together with parts of farms where the raising of fur-bearing animals is carried on as a distinct branch of the operations. Such farms increased in numbers from 429 in 1919 to 6,392 in 1933, or, if muskrat and beaver farms are included, to 6,473, and the industry is still growing in number of farms and varieties of fur-bearing animals on these farms, although its revenue has suffered from the effects of the low price levels of the past three years for live animals and pelts of all kinds. Although the fox has proved the most suited to domestication, other kinds of fur-bearing wild animals are being raised in captivity—mink, raccoon, skunk, marten, fisher and fitch. Mink farms are now the most numerous of the miscellaneous class, raccoon farms coming second. A few of the fox farms also raise miscellaneous fur-bearing animals in addition to the foxes.

**Capital Investment.**—The earliest Dominion-wide statistics of fur farms were collected for the year 1919, and since then annual statistics have been obtained. Statistics showing the numbers and values of fur-bearing animals on fur farms are given in Tables 19 and 20. The capital investment in lands and buildings in 1933 was \$6,265,201, making a grand total investment of \$13,774,768 in the industry in that year.

---

\* Revised by Miss F. A. Brown, Chief, Fur Statistics Branch, Dominion Bureau of Statistics. A list of publications of this Branch will be found in Chapter XXIX. For further particulars regarding fur farming the reader is referred to the Report on Fur Farms, 1933, which may be obtained from the Dominion Statistician, Ottawa.

<sup>1</sup> Based on estimates furnished by the operators of the farms.

**Annual Revenue.**—The annual revenue of the fur farmer arises from two sources, the sale of animals and the sale of pelts. Table 21 shows the sales of animals by kinds in the years 1925 to 1933 and Table 22 the sales of pelts. During the four latest years the sales of pelts have exceeded the sales of live animals, while in former years the reverse was the case.

**The Provincial Distribution of Fur Farming.**—The statistics of Table 23, showing the capital investment in the industry by provinces, indicate that Prince Edward Island no longer holds its earlier margin of supremacy in the industry. In recent years the larger and more populous provinces of Quebec and Ontario have exceeded Prince Edward Island in the number of fur farms and in the capital invested in fur-bearing animals as well as in land and buildings used for fur farming.

**Subsection 6.—Horticulture.**

The statistical treatment of horticulture is necessarily confined to commercial fruit growing, vegetable growing and floriculture, although production in private gardens for home use is unquestionably in larger volume than production for sale in the case of vegetables and flowers. Of the three branches of commercial horticulture, fruit growing is the most important.

The native fruits of Canada, with the exception of the blueberry and the cranberry, are not cultivated on a commercial scale. Among the introduced fruits, the apple holds the premier place in Canadian fruit growing, the value of the commercial production of this fruit averaging about 10 million dollars annually for the 5 years 1929-33. An important subsidiary of the grape-growing industry is the manufacture of native wines, which increased from an estimated value of \$560,000 in 1917, the earliest year available, to \$5,541,000 in 1929, with an estimated value of \$2,646,000 in 1933. For a fuller discussion of fruit farming in Canada, the reader is referred to pp. 242-247 of the 1931 edition of the Year Book. Closely associated with fruit farming is the tree nursery industry.

Satisfactory annual statistics are not available at present regarding the commercial production of vegetables, but important information on the subject is obtained through the decennial census and will be found under census statistics.

**Census Statistics of Fruit and Vegetable Production.**—Much of the most valuable statistical information regarding the production of fruit and vegetables in Canada can be obtained only through the medium of the decennial censuses.

*Fruit.*—In the course of each census a record is obtained of the numbers of the different kinds of fruit trees and of grape vines of bearing age or planted out but not yet of bearing age at the date of the census, in addition to the acreage devoted to orchard, vineyard and small fruit. Furthermore, an accurate check is made upon the annual estimates of fruit production by obtaining from each producer a statement of the quantities and values of different kinds of fruit produced. Such information obtained through the census is summarized in Tables 24, 25 and 26. A notable fact shown in Table 24 is that the number of bearing trees of each kind of fruit as well as the total acreage in orchard was less in 1931 than in 1921 or 1911. In fact there has been a progressive decline in every tree fruit except the peach. Furthermore, with the same exception, the number of young trees planted out but

not yet bearing was smaller in each case than at the two former censuses, which appears to indicate a continuation of the decline. In the case of peaches the figures point to the probability of some prospective increase in acreage. In the case of grapes, the Census of 1931 showed a large increase in bearing vines, while the number of young vines not yet bearing indicated the possibility of a further increase of more than 50 p.c. in productive vineyard. The total acreage of vineyard was at a record level. The acreage devoted to small fruits has shown very little expansion over the past 20 years.

**24.—Fruit Trees, of Bearing Age and not of Bearing Age, and Acreages of Fruit in Canada, 1911, 1921 and 1931.**

<sup>1</sup> Includes crab apple trees. <sup>2</sup> Not given. <sup>3</sup> Including acreages not of bearing age.

Table 25 shows the comparatively small number of specialized fruit farms in Canada in 1931. Of 728,244 occupied farms only 7,977 or 1.1 p.c. reported more than 300 trees. Only those farms enumerated in the last two columns, that is, with over 300 trees, can really be considered as specialized fruit farms, since 300 trees represent 7 to 10 acres of apples or 3 to 4 acres of other tree fruits. If the analysis could be carried further to show the total of trees on farms in each group it is probable that a large proportion of the total trees would be found to be on the farms with over 300 trees per farm. It may be observed that by far the largest numbers of specialized fruit farms are in the groups containing from 10 to 200 acres.

| 480-639 ".....     | 1,542                | 373              | 481          | 306          | 142          | 48           | 69             | 60             | 21             | 42                  |
| 640 acres and over | 1,157                | 257              | 375          | 197          | 99           | 35           | 57             | 55             | 21             | 61                  |

Table 26 shows that, in spite of the decline in bearing trees, when allowance is made for annual variations in crops, production has been fairly well maintained, due, no doubt, to the trend for fruit production to shift from an incidental department of the general farm to the specialized commercial fruit farm, where improved practices are followed in the selection of productive varieties and in general methods of culture. In small fruits there was a notable increase recorded in 1930 in the production of loganberries, while the production of currants and gooseberries has declined to little more than a third of that of 1910.

<sup>1</sup> Includes crab apples. <sup>2</sup> Quantities in boxes in 1910. <sup>3</sup> Not given separately in 1910.

*Vegetables.*—In view of the fact that so large a proportion of vegetables are grown either in gardens for home use or else are sold directly from producer to consumer on public markets in urban centres, an accurate record of production can only be obtained through the individual enumeration at the decennial census. The total value of vegetables grown on farms in 1930 was \$28,071,354, of which total \$15,374,684 represented the value of vegetables grown on farms for home use and \$12,696,670 vegetables grown on farms for sale. Comparable figures for 1920, when the general price level was very much higher, were: total value \$20,073,782; for home use \$13,907,856; and for sale \$6,165,926. The figures for either census do not include vegetables grown elsewhere than on farms, *i.e.*, in the private lots and gardens of people other than farmers and market gardeners. The statistics of Table 27 deal only with vegetables grown for sale by farmers and market gardeners and are exclusive of vegetables grown for home use which in both censuses had a larger value and are also exclusive of vegetables grown elsewhere than on farms. The figures indicate a large expansion in the production of vegetables for sale during the decade. The expansion has been particularly marked in those vegetables, such as tomatoes, sweet corn, green beans, green peas and asparagus, which form the chief crops for the vegetable-canning industry.

**Annual Statistics of Fruit Production.**—Table 28 shows the estimated quantities and values of commercial fruits produced in Canada in 1932 and 1933.

Owing to changes in the method of collecting these statistics, in some instances they cannot be considered as strictly comparable with those published in previous editions of the Year Book. Figures for the years 1923-31 on the old basis will be found at p. 1054 of the 1932 Year Book.

<sup>1</sup> Revised since the publication of the 1933 Year Book.

**The Tree Nursery Industry.**—The first Canadian commercial nursery was established near Fonthill, Ont., and it was followed within a few years by the establishment of a nursery in Toronto by a Rochester, N.Y., firm. Since that time the industry has steadily spread as the country has developed, until to-day there are approximately 248 firms growing or dealing in nursery stock of all kinds, including fruit trees.

<sup>1</sup>Revised since the publication of the 1933 Year Book.

The table shows that for the whole of Canada there were estimated increases of 254,620 lb. of maple sugar and 137,117 gal. of maple syrup and an increase of \$320,089 in the combined value of the two products in 1934 as compared with 1933.

**Sugar Beets and Beetroot Sugar.**—A brief account of the development of the beetroot sugar industry in Canada will be found in the Canada Year Book, 1925, pp. 255-256. At the present time two companies are operating in Canada: the Canada and Dominion Sugar Co., Ltd., with factories at Chatham and Wallaceburg in Ontario, and the Canadian Sugar Factories, Ltd., with a plant at Raymond, Alberta. Table 32 shows the area, yield and value of sugar beets grown in Canada in the years 1924-33.

### 32.—Acreages, Yields and Values of Sugar Beets in Canada and Quantities of Refined Beetroot Sugar Produced, 1924-33.

The yields in 1933 of the largest beet-growing countries, in thousands of short tons, were as follows: Russia, 9,921; Germany, 9,457; United States, 11,030; France, 8,224; Czechoslovakia, 3,212; Poland, 2,042; Italy, 2,363; England and Wales, 3,360; Belgium, 1,671; Netherlands, 2,148; Austria, 1,177.

**Tobacco.\***—In 1933, the commercial tobacco crop of Canada amounted to 39,400,000 pounds from 39,400 acres, as compared with 54,094,000 pounds from 54,094 acres in 1932. The farm value of the tobacco crop in 1933 is estimated at \$5,201,490 as compared with \$6,088,300 in 1932.

Table 33 lists the acreages, quantities produced and average yields per acre for 1900, 1910, and 1920 to 1933. The acreages for 1911, 1921 and 1931 are also the comprehensive figures of the census. For the inter-censal years, the acreage and production statistics quoted relate to the commercial crop only. This distinction is much more necessary in Quebec than in Ontario, since a considerable part of the tobacco production of Quebec comes from small plots.

**33.—Acreages and Yields of Tobacco in Canada, by Provinces, 1900, 1910, 1911 and 1920-33.**

| 1933. | 5,091  | 30,546      | —         | 3,055 | 65,227  | —         | 96,233  | 159,460   |
| 1934. | 5,965  | 41,755      | 45,000    | 4,361 | 128,268 | 7,200     | 114,450 | 249,918   |

**Hives and Honey.**—The number of hives of bees in Canada was 189,986 in 1901, 180,372 in 1911, 185,530 in 1921 and 279,453 in 1931. The quantity of honey produced was 3,569,567 lb. in 1900, 6,089,784 lb. in 1910, 6,370,300 lb. in 1920 and 18,459,972 lb. in 1930. The above figures show that there has been a pronounced expansion in apiculture in the decade from 1920 to 1930 which is covered by Table 35. Ontario and Quebec have always been the chief honey-producing provinces, but, while these two provinces produced nearly 95 p.c. of the total for Canada in 1920, in 1930 their production was little over 80 p.c. of the total. The most notable development of the decade was the great increase in both the number of hives and the production of honey in the Prairie Provinces. In 1920 the production of these three provinces amounted to only 2 p.c. of the total for Canada, while in 1930 it had increased to over 16 p.c. of the total.

**35.—Numbers of Hives of Bees and Quantities and Values of Honey Produced in Canada, as Recorded at the Censuses of 1921 and 1931.**

There are at present no uniform annual statistics of hives and honey for all the provinces, but a synopsis of the existing provincial estimates for recent years was given in the Monthly Bulletin of Agricultural Statistics for March, 1934. These estimates show a honey production in 1933 amounting to 19,543,500 lb., the average value per lb. 9 cents and the total value \$1,706,800.

## Subsection 8.—Farm Labour and Wages.

**Average Wages of Farm Help.**—The cost of farm labour reached its highest point in 1920. In the next two years there was a rapid drop, while from 1923 until 1929, there was little change. The years 1930 to 1933 showed continuous marked reductions in the average value of yearly wages and board, following the downward trend of the prices of farm produce. In 1934 slight increases were registered.

In Table 36 the values of wages and board are given for the years 1914, 1920, 1930 and 1932-34, both for the summer season and for the year, distinction being made in all cases between wages and board.

**36.—Average Wages and Board of Farm Help in Canada, as Estimated by Crop Correspondents, 1914, 1920, 1930 and 1932-34.**

NOTE.—M=Males. F=Females.

**Subsection 9.—Prices of Agricultural Produce.**

The average monthly cash prices of representative grades of Canadian wheat, oats, barley, flax and rye in the Winnipeg market—basis, in store at Fort William and Port Arthur—will be found for each month from January, 1933, to December, 1934, in Table 37. The average yearly prices of home-grown wheat, barley and oats in England and Wales are furnished in Table 38; in this table British currency is converted into Canadian currency at par rate of exchange (£=\$4.86). The average monthly prices of flour, bran and shorts at Montreal, Toronto, Winnipeg, Minneapolis and Duluth for 1933 and 1934 are given in Table 39.

The yearly average prices per cwt. of Canadian live stock at Toronto, Montreal, Winnipeg and Edmonton are given for 1932 and 1933 in Table 40 and the average monthly prices in 1933 and 1934 at these centres and at Calgary in Tables 41 and 41A.

**37.—Monthly Average Cash Prices per Bushel at Winnipeg of Representative Grades of Canadian Wheat, Oats, Barley, Flax and Rye—basis, in store at Fort William and Port Arthur—1933-34, and Yearly Average Prices for crop years ended July 31, 1926-34.**

## INDEX NUMBERS OF AVERAGE PRICES OF FIELD CROPS, 1913-1934

ANNUAL AVERAGE PRICES  
1913 = 100

**Index Numbers of Agricultural Prices.**—Records of the average prices received by farmers for their crops have been collected annually since 1909 through the crop correspondents of the Census and Statistics Office or the Dominion Bureau of Statistics. From these records, annual index numbers have been calculated for each crop and for the field crops as a whole. In calculating the index numbers in the present instance, the base period used is 1926. Index numbers have been calculated of the yields of the various crops from year to year. From these data index numbers of the value of all field crops, weighted according to the quantity produced in each case, have been obtained. The results of these calculations are presented in Table 42.

#### 42.—Index Numbers of Producers' Prices of Agricultural Commodities, for Canada, 1913-34.

NOTE.—Average Prices, 1926 = 100.

For the formulæ used in the calculation see Monthly Bulletin of Agricultural Statistics, January, 1935, p. 18.

<sup>1</sup>Prices quoted are per bushel, except for potatoes and turnips, etc., which are per cwt., and the last five items, which are per ton. For details of index numbers by provinces, see Monthly Bulletin of Agricultural Statistics, January, 1935, pp. 18-25. <sup>2</sup>Revised since the publication of the 1933 Year Book.

The general index number fell from 1924 to 1928, especially from 1926 to 1928, recovered strongly in 1929 but declined rapidly to reach the record low of 43.1 for the 1932 crops. All the crops contributed to this sharp decline, although the grain crops dependent upon overseas markets suffered the most. The forage crops and sugar beets, which are used within the country, held up well in price, but climatic conditions did not favour high yields, so the values were lower.

During the past two years there has been a considerable improvement in the prices of these field crops. Grain prices began to rise in May, 1934, which benefited the late marketings of the 1933 crops and prices have held steadily higher during the marketing period of the 1934 crop to date. Fodder and hay prices have risen materially because of the short crops and good demand. In fact, only potatoes, turnips and sugar beets have lagged in the general advance. The general index rose from 43.1 in 1932 to 55.7 in 1933 and 67.0 in 1934.

### Subsection 10.—Agricultural Statistics of the Census.

A selection of the more important agricultural statistics of the Census of 1921 was published at pp. 269-271 of the 1929 edition of the Year Book. Further, certain agricultural statistics of the Prairie Provinces collected at their Quinquennial Census of 1926 were published at pp. 271-273 of the same volume. The complete agricultural statistics of the Census of 1921 are published in Volume V of the publications of the census of that year, while the detailed agricultural statistics of the Census of the Prairie Provinces of 1926 will be found in the reports of the census of that year, issued separately for the provinces of Manitoba, Saskatchewan and Alberta. The agricultural statistics of the Census of 1931 are to be published as Volume VIII, Census of 1931.

A summary of the more important miscellaneous agricultural statistics compiled from this latest census follow in this subsection. These deal with: farm tenure, values, indebtedness and expenditures (Table 43); farm population and farm workers (Table 44); and farm machinery and facilities (Table 45).

**Farm Tenure, Values, Indebtedness and Expenditures.**—Table 43, pp. 296-297, gives final results of the Census of Agriculture taken as of June 1, 1931, regarding tenure of occupied farms and of farm areas, farm values, mortgage indebtedness and expenditures. The outstanding feature of the table is the decrease shown in the number of owned farms and the large increases in the other two classes "partly-owned, partly-rented" and "occupied by tenants" as compared with the Census of 1921. The percentage of all farms fully owned, for the whole of Canada, has decreased from 86.52 p.c. in 1921 to 80.05 p.c. in 1931. The large acreage in the "partly-owned, partly-rented" type in the western provinces is due to the fact that most ranches are composed of small acreages actually owned and additional large acreages of pasture leased from the governments.

Farm values, when compared with 1921, show that for Canada as a whole they have decreased by 20.33 p.c.; most of this decrease has been suffered by land and live stock, the former accounting for 74.9 p.c. of the total decrease and the latter 21.8 p.c. Generally speaking the eastern provinces show a smaller decline in values than the Prairie Provinces.

### 43.—Tenure of Farms by Numbers and Areas, Farm Values, Mortgage Indebtedness and Farm Expenditures, by Provinces, Census of 1931.

<sup>1</sup> Include farms occupied by managers.<sup>2</sup> Include mortgage debt on owned parts of farms only.<sup>3</sup> The term "fully-owned" as employed here means the owners who own all of their farms and does not include the owned part of the farms partly owned and partly rented.<sup>4</sup> Include taxes on owned farm property only. <sup>5</sup> This item represents "cash" paid in each case and does not include the values of products paid by share tenants. <sup>6</sup> Occupied farm lands in the Northwest Territories and Yukon have an area of approximately 5,000 acres (see Table 1, Chapter XXVIII).<sup>7</sup> Farm expenditures were taken for 1930, the latest complete calendar year previous to the census.

Statistics covering mortgage indebtedness were compiled for the first time for Canada in 1931. Every farm owner was asked for a statement of the mortgage debt on his farm. The instructions to enumerators read as follows: "The mortgage debt to be reported includes not only the debt secured by an instrument called a 'mortgage' but also debts protected by deeds of trust, judgments or by any other legal instrument that partakes of the nature of a mortgage and which has the same legal effect. It has reference only to a debt secured by a mortgage, or by an equivalent legal instrument on lands and buildings". This, however, does not represent all the farmers' obligations as it covers only land operated by the owners themselves. The total mortgage debt reported on owned farm land in Canada amounted to \$671,776,500 on June 1, 1931. This amount was distributed among the provinces as follows: Ontario 29.74 p.c., Saskatchewan 26.16 p.c., Alberta 16.00 p.c., Quebec 14.35 p.c., Manitoba 8.82 p.c., British Columbia 2.26 p.c., Nova Scotia 0.98 p.c., New Brunswick 0.97 p.c., and Prince Edward Island 0.72 p.c.

In order to state the ratio of the mortgage debt to the value of the farms, only the "fully-owned" farms were considered, because in the case of the "partly-owned, partly-rented" farms the value of the farm was stated as a whole, consequently it is impossible to determine the value of the part which was owned. Since the number of fully-owned farms represents over 79 p.c. of the total, the sample is sufficiently large to be representative of the whole. For the Dominion as a whole 35.56 p.c. of the fully-owned farms reported mortgage debts. This percentage was distributed as follows: Prince Edward Island 33.49 p.c., Nova Scotia 10.35 p.c., New Brunswick 17.61 p.c., Quebec 31.74 p.c., Ontario 40.82 p.c., Manitoba 39.68 p.c., Saskatchewan 46.04 p.c., Alberta 39.62 p.c., and British Columbia 25.88 p.c. The ratio of the mortgage debt to the value of the mortgaged farm is as follows: Canada 40.86 p.c., Prince Edward Island 33.74 p.c., Nova Scotia 40.45 p.c., New Brunswick 38.26 p.c., Quebec 38.27 p.c., Ontario 44.79 p.c., Manitoba 49.46 p.c., Saskatchewan 38.11 p.c., Alberta 38.75 p.c., and British Columbia 34.76 p.c.

Statistics of farm expenditures are also given in Table 43. The figures of taxes are for farms occupied by owners only and therefore do not represent the whole amount of taxes paid. There are no comparable figures for previous censuses, since this information was first asked for on the schedules of 1931.

The expenditure for feed has decreased generally in all the provinces from 1921 to 1931, but the indications are that the decreases are not in the quantities bought but in the prices which prevailed. There has been an increase in the use of fertilizers since 1921. This increase has taken place mostly in Ontario and the Maritime Provinces and may be associated with the growing of potatoes and fruits.

Information relating to cash expenditure for electric light and power and for spraying chemicals was obtained for the first time in 1931.

The amount of money expended for labour may be taken as an index of the changes which have taken place in methods of farming during the period 1921-31. Compared with 1921, there has been an increase in money spent for hired labour in the Maritime Provinces, where specialized farming requiring manual labour has been developed during the past decade. There was, however, a decrease in labour costs in most of the other provinces where improved machinery has done away to a large extent with the necessity of using manual labour.

**Farm Population and Farm Workers.**—Table 44 shows the number of farm workers in 1930, made up of male and female members of the family and permanently and temporarily hired men. It should be pointed out in connection with the number of temporarily employed men that these represent help for seasonal work from farm to farm such as fruit-picking, crop harvesting, etc., and therefore the same individual may be counted a number of times from a number of different farms.

Unfortunately, no really comparable statistics are available from the Census of 1921, which recorded only the cost of hired farm help amounting to \$131,677,166 for Canada in 1920 as compared with \$100,425,980 in 1930, but general wage rates were at a very much higher level in 1920 than in 1930. The most instructive figures in Table 44 are those showing the number of members of the family who were farm workers and the number of weeks of hired labour. In Canada as a whole farm workers who were male and female members of the family constituted 33.2 p.c. of the total farm population.

Of the 728,623 farms in Canada only 281,044 or 38.6 p.c. employed hired help. The percentage of farms employing hired help was highest in Ontario with 44.6 p.c. and Prince Edward Island with 43.2 p.c. and lowest in Nova Scotia with 27.9 p.c. and Quebec with 28.2 p.c. On those farms reporting hired labour there was an average of 26.2 weeks of such labour for the whole of Canada, 17.1 weeks in Prince Edward Island, 18.3 in Nova Scotia, 16.9 in New Brunswick, 20.5 in Quebec, 28.3 in Ontario, 31.2 in Manitoba, 27.1 in Saskatchewan, 26.3 in Alberta and 37.5 weeks per farm reporting help in British Columbia. The average cost of hired labour per week was highest in Alberta, British Columbia and Saskatchewan and lowest in Prince Edward Island.

#### 44.—Farm Population, Workers, Weeks of Hired Labour and Cost of Labour, by Provinces, Census of 1931.

NOTE.—The numbers of farms and of farm population are as of June 1, 1931. The remaining statistics apply to the calendar year 1930.

<sup>1</sup> Includes population on farms located in urban localities. For this distribution of rural and urban farm population by provinces, see Table 43, p. 156.

**Farm Machinery and Facilities, 1931.**—The data of Table 45 record an attempt to determine changes in the general economic condition of agriculture and of the farming population in Canada, represented by mechanical equipment for the farm, conveniences for the household, and communication with the main centres of population. In 1931 information was collected upon a number of items for the first time.

With regard to farm equipment, naturally the Prairie Provinces with their tendency to specialize in grain crops show a greater concentration than other provinces of grain-harvesting machinery such as binders, headers and combines. In Ontario, on the other hand, there were 18.5 silos per 100 farms, 7.8 in British Columbia and 4.5 in Quebec, while the highest percentage in any other province was 0.8 in Manitoba. In 1931, for the whole of Canada, there were 50.7 automobiles or motor trucks per 100 farms as compared to 22.1 in 1921. The proportion was highest in Ontario with 73 vehicles per 100 farms, next in Saskatchewan and British Columbia with 55.7 each, and lowest in Quebec with 23.6. The number of tractors reported increased from 47,455 in 1921 to 105,360 in 1931. The number of tractors per 100 farms in 1931 was 31.7 in Saskatchewan, 26.5 in Manitoba and 24.6 in Alberta, while Ontario, which was the highest of the other provinces, had only 9.8 per 100 farms.

In the Census of 1931, 233,962 farms reported telephones as compared with 231,725 in 1921, Manitoba, Saskatchewan and Alberta showing decreases, while all the other provinces showed increases. In 1931, 73,351 farms, or 10 p.c., reported gas or electric light as compared with 26,842, or 4.2 p.c., in 1921. In British Columbia 24.5 p.c. of the farms had this convenience, 16.8 p.c. in Ontario, 14.0 p.c. in Quebec, 9.5 p.c. in Nova Scotia and only 2.8 p.c. to 3.6 p.c. in the Prairie Provinces. Water facilities were reported for the first time in 1931. In Quebec 31.9 p.c. of the farms had water piped in the kitchen, 31.2 p.c. in British Columbia, 11.2 p.c. in New Brunswick, 10.4 p.c. in Ontario, 10.2 p.c. in Nova Scotia, and only from 1.4 p.c. to 2.1 p.c. in the Prairie Provinces. Comparatively few farms, less than 5 p.c. in Canada, had water piped in bathrooms, the percentage varying from 20 p.c. in British Columbia and 8.2 p.c. in Quebec down to only 1.2 p.c. in Saskatchewan. On the whole there appears to be plenty of room yet for improvement in the provision of farm facilities and household conveniences in Canadian rural life.

No information is available regarding the types of road on which farms were located in 1921, but undoubtedly there was great improvement in this respect between then and 1931. (See Chapter XVIII, Part V, of this volume.) In 1931 the percentage of all farms located on unimproved dirt roads for each of the provinces was: Canada 22.0 p.c.; Prince Edward Island 26.6 p.c.; Nova Scotia 21.4 p.c.; New Brunswick 13.3 p.c.; Quebec 22.2 p.c.; Ontario 9.8 p.c.; Manitoba 30.4 p.c.; Saskatchewan 32.0 p.c.; Alberta 31.8 p.c.; and British Columbia 14.3 p.c.

Questions were asked in the Census of 1931 relating to the distance farms were located from a market town and a railway station. The results regarding the distance from a market town were not very dependable, as there was room for a difference in interpretation concerning what constituted a market town. In the case of distance from a railway station only 6.6 p.c. of all farms in the Dominion reported this as 15 miles or more. By provinces, the farms so reporting were: 0.9 p.c. in Prince Edward Island; 14.6 p.c. in Nova Scotia; 5.3 p.c. in New Brunswick; 8.3 p.c. in Quebec; 2.6 p.c. in Ontario; 3.0 p.c. in Manitoba; 5.4 p.c. in Saskatchewan; 12.8 p.c. in Alberta; and 11.4 p.c. in British Columbia.

### Subsection 11.—Miscellaneous Agricultural Statistics.

**Agricultural Irrigation.\***—The surface waters in Alberta are vested in the Crown and are administered by the Water Resources Office under the Water Resources Act. All matters affecting the control of water supply generally, as well as the inspection and authorization of works for the use of water for domestic, municipal, industrial, irrigation and other purposes and the granting of licences for such purposes are dealt with thereunder. The Director of Water Resources at Edmonton is responsible for all field administration. The Irrigation Districts Act of Alberta (R.S.A., 1922, c. 114) and amending statutes provide for the formation of irrigation districts, and authorize the raising of loans under by-laws adopted by the voters of the district. Table 46 gives statistics of the larger irrigation projects in Alberta for the years 1932 and 1933.

**46.—Major Irrigation Projects in Southern Alberta, 1932 and 1933.**

The Canadian Pacific Railway Co. has constructed, and is operating in Alberta, three large projects known as the Eastern, Western and Lethbridge sections, the last named being the oldest irrigation project in Alberta. The area irrigable by these projects is 557,980 acres. By agreement with the Canadian Pacific Railway Co., the Taber, Magrath and Raymond irrigation districts procure their water supply from the main canal of the Lethbridge section, a further 43,603 acres being served by the canals of these districts.

\*Revised by L. C. Charlesworth, Irrigation Council, Water Resources Office, Edmonton, Alberta.

The total irrigable area served by the Canada Land and Irrigation Co.'s project is 130,000 acres, while the New West irrigation district, by agreement with the Canada Land and Irrigation Co., receives a water supply for a further irrigable area of 4,563 acres.

In addition to the irrigated tracts enumerated in the foregoing table, there were, at Dec. 31, 1932, about 343 privately owned projects in Alberta, with a possible irrigable area of 54,930 acres, and at Dec. 31, 1933, 348 projects with a possible irrigable area of 55,617 acres.

**Average Value of Farm Lands.**—Statistics showing the average value of farm lands in Canada in 1910 and from 1917 to 1934, are given in Table 47. The values are as estimated by crop correspondents and show the rise in land values between 1910 and 1920, the general decline with moderate fluctuations from 1920 to 1929, and the rapid fall since 1929 to a point below the 1910 level for the country as a whole.

**47.—Average Values per Acre of Occupied Farm Lands<sup>1</sup> in Canada, as Estimated by Crop Correspondents, 1910 and 1917-34.**

<sup>1</sup> Orchards and fruit lands, 1934, with 1933 in parentheses: Nova Scotia \$77 (\$75); Ontario \$84 (\$89); British Columbia \$280 (\$270).

<sup>2</sup> Actual returns were not collected from crop correspondents in Saskatchewan for 1924, and the estimate of 1924 is interpolated.

### Subsection 12.—International Agricultural Statistics.

**World Production of Cereals and Potatoes.**—Table 48, constructed from data published by the International Institute of Agriculture, shows the areas and yields of wheat, oats, barley, rye, corn and potatoes for the years 1933 and 1934 in countries of the Northern Hemisphere, and for the years 1933-34 and 1934-35 in countries of the Southern Hemisphere. The annual average acreages and yields are also given for the five-year period, 1928-32 (1928-29 to 1932-33), and the areas and yields of 1934 (1934-35) are compared in percentages with those of the five-year period.

**48.—Acreages and Yields of Cereals and Potatoes in Countries of the World, 1933 and 1934, with Five-Year Average for 1928-32.**

<sup>1</sup> The statistics of the Southern Hemisphere are given for the years 1933-34 and 1934-35; the averages are for the five-year period 1928-29 to 1932-33 and the percentage columns give 1934-35 figures as percentages of the averages. <sup>2</sup> Area sown. <sup>3</sup> Area harvested. <sup>4</sup> Totals include only those countries for which information is complete throughout.

**48.—Acreages and Yields of Cereals and Potatoes in Countries of the World, 1933 and 1934, with Five-Year Averages for 1928-32—concluded.**

<sup>1</sup> The statistics of the Southern Hemisphere are for the years 1933-34 and 1934-35; the averages are for the five-year period 1928-29 to 1932-33 and the percentage columns give 1934-35, figures as percentages of the averages. <sup>2</sup> Totals include only those countries for which information is complete throughout.

**World Exports and Imports of Wheat and Flour.**—Statistics showing the exports and imports of wheat and wheat flour for the principal countries of the world in the crop year ended July 31, 1934, with comparative figures for the previous crop year, are shown in Table 49. This information is taken from data published by the International Institute of Agriculture. During the crop year 1933-34, a total of 509,285,000 bushels of wheat is shown as exported, as compared with 584,-036,000 bushels in the previous year.

**49.—Exports of Wheat and Flour from the Principal Wheat-Exporting Countries and Imports of Wheat and Flour into the Principal Wheat-Importing Countries, crop years ended July 31, 1933 and 1934.**

**World Live Stock.**—The statistics of Table 50, compiled from data published by the International Institute of Agriculture, show as nearly as possible, the world situation with regard to live stock about 1932. For many countries, the figures are the result of careful enumeration, while for others, they represent only approximate estimates.

**50.—Numbers of Live Stock in Principal Countries, circa 1932.**

| Continent and Country.                  | Horses.                | Cattle.                | Sheep.                | Swine.                 |

## CHAPTER IX.—FORESTRY.\*

### Section 1.—Physiography, Geology and Climate as Affecting the Forests.

The Dominion of Canada may be roughly divided into three main drainage areas—the Pacific slope west of the Rocky mountains; the Great Plains Region draining into the Arctic ocean and Hudson bay; and the basin of the Great Lakes and the St. Lawrence, together with the Maritime Provinces. Each of these three regions supports a distinct type of forest growth.

**The Pacific Slope.**—The Pacific slope is characterized by several systems of mountains running approximately parallel and extending from the southeast to the northwest. The Rocky mountains vary in elevation from 5,000 to 13,000 feet above sea-level, with numerous peaks extending well above 10,000 feet. Between this system and the Pacific are: the Columbian system, comprising the Selkirk, Monashee and Caribou mountains; the Interior Plateau system; the Cassiar and Yukon systems; the Pacific system comprising the Cascade, Coast and lesser ranges, terminating with the sunken Insular system whose upper elevations form Vancouver island, the Queen Charlotte group and other coast islands. The chief rivers follow the valleys between these ranges, breaking through in some cases along the shorter cross valleys from east to west.

The Rocky mountains are formed chiefly of Palæozoic rocks, as are also the islands off the coast. The Coast range is almost entirely granitic and the Selkirks are Precambrian or Cambrian. The intervening ranges are of mixed formations, varying from rocks of sedimentary origin to granites. The best soil in British Columbia is concentrated in valley bottoms or alluvial deltas, and the purely agricultural area has been estimated at about 10 p.c. of the land area.

The climate along the coast is mild and humid, with a mean annual temperature varying from 44° to 49° F. The precipitation is the heaviest in Canada, varying from 40 to 120 inches. The greater part of this precipitation falls during autumn and winter, only 30 p.c. falling during the growing season, to which fact is sometimes ascribed the scarcity of deciduous-leaved forest growth, which requires more moisture during the growing season. In any case, coniferous tree growth in this region is the most luxuriant in Canada and the forests have the most rapid rate of growth, the largest individual trees and the heaviest stands of timber extending from sea-level up to elevations of 3,500 or 4,000 feet. The Interior Dry Belt of British Columbia has a low annual precipitation, varying from 10 to 20 inches. Extremes of temperature from 100° F. to -45° F. make this a region unfavourable to tree growth. The winds from the Pacific, which precipitate most of their moisture on the Coast and Cascade mountains, cross this interior plateau, leaving its southern part in a semi-arid state, and give up a large part of what moisture remains when they reach the Selkirk and Rocky mountains, forming what may be termed the Interior Wet Belt, centred in the Columbia valley. Here the precipitation averages over 30 and sometimes reaches 60 inches, taking the form of snow in higher altitudes. Temperatures vary from 100° F. to -17° F. In the Rocky Mountain range itself the climate is more extreme and variable than to the westward.

\*Material in this chapter has been prepared in co-operation with Roland D. Craig, F.E., of the Forest Service of the Department of the Interior, by R. G. Lewis, B.Sc.F., Chief of the Forest Products Branch of the Dominion Bureau of Statistics. This Branch collects and compiles statistics relating to forest production and publishes four annual printed reports covering the lumber industry, the pulp and paper industry and the wood-using and paper-using industries of Canada. These printed reports are usually preceded by a number of preliminary mimeographed reports, one for each important industry or group of industries. For detailed list of publications see Chapter XXIX.

MAP OF THE  
DOMINION OF CANADA  
SHOWING  
FOREST BELTS

FOREST BELTS OF CANADA

**The Great Plains.**—East of the Rockies lies the Great Plains Region, composed of a variety of topographical types. From the foothills of the Rockies, the country slopes gradually eastward and northward. The prairie country extends from the International Boundary to the 55th parallel along the foothills, gradually tapering down toward the east to a point near the lake of the Woods. Of this area, 105,000 square miles is now almost entirely treeless, with rich fertile soil, and is at present a purely agricultural or pastoral country. Whether its present treeless condition is due to climatic or other causes is problematical, but the presence of isolated patches of tree growth in situations well protected from fire, the ease with which these natural groves can be increased and new plantations established by artificial planting and protection from prairie fires, would seem to indicate that repeated burning accounts, at least in part, for its present treeless state. The underlying rocks are of the Cenozoic and Mesozoic eras. The climate of Alberta is extremely variable in winter, due to a warm, dry wind known as the *Chinook*, which blows from the south and southwest and extends its influence from the International Boundary to the Peace river and eastward to Regina in Saskatchewan. In summer the isotherms run almost due north and south in Alberta. Rainfall varies from 15 to 20 inches. The temperature in Manitoba has an absolute recorded range of 150°F., with a mean range of 71°. Saskatchewan and Alberta are more temperate, especially where they are affected by the *Chinook*. North of the treeless prairies is a region largely unexplored, covered at first by a comparatively light forest growth which toward the north and east gives way to the sub-Arctic "tundra"—a region of muskeg and bare, glacier-worn rocks of the Laurentian and Precambrian types.

These Laurentian rocks in Canada form the Archæan or Canadian Shield, with a distinct type of topography. This rock formation covers a huge irregular triangle with its apex near the Thousand islands in the St. Lawrence, from which point one arm extends northwesterly to the mouth of the Mackenzie river and the other northeasterly down the St. Lawrence valley to include the Labrador peninsula. This region has been reduced to a peneplained condition by repeated glacial action which has worn down the high elevations and scoured out most of the soil except in isolated depressions. It is covered with innumerable lakes, muskeg or bog, and rivers. The southern portion of the Shield is to a great extent agricultural land, actual or potential, much of which is still heavily forested. Toward the north tree growth becomes lighter and the climate as a rule becomes too severe for continuous successful agriculture. Still farther toward the north, tree growth ceases and the region merges into the same belt of sub-Arctic "tundra" already mentioned.

**The St. Lawrence Basin and the Atlantic Slope.**—The basin of the St. Lawrence and Great Lakes contains a variety of topographical and geological types. The north shores of lake Superior and Georgian bay, the upper Ottawa River valley and the southern part of Labrador, are parts of the Laurentian Shield already described. Here the climate is tempered in part by the presence of the lakes and the gulf of St. Lawrence but is, nevertheless, severe and variable. To the south, soil and climate improve, and the southwestern peninsula of Ontario, the north shore of lake Ontario and the St. Lawrence valley are all essentially agricultural land. The rock here is of sedimentary origin, mostly of Palæozoic age.

The Maritime Provinces, with a general slope towards the Atlantic, are varied in topography and geology. The climate resembles that of southern Ontario, being modified by the presence of the ocean. Precipitation is above 35 inches annually. This region supports a type of forest similar to that of the southern portion of the Archæan Shield.

## Section 2.—Main Types of Forest Growth.

Physiographic, climatic and soil conditions in Canada favour the coniferous type of forest. While the more fertile portions of Ontario, Quebec and the Maritime Provinces once supported a heavy virgin growth of hardwoods, the greater part of Canada's forest area is covered with spruce, pine, balsam, Douglas fir and other coniferous soft woods. Three main groups of forest growth in Canada follow the main physiographic divisions already mentioned. These groups are the Cordilleran, the Great Plains and the Eastern forests.

**The Cordilleran Forests.**—The Cordilleran Forest Region extends from the Pacific Coast to the eastern foothills of the Rocky mountains and may be subdivided into the Coast Belt, the Interior Dry Belt, the Interior Wet Belt and the Rocky Mountain Belt. The Coast Belt includes several distinct forest types, their character being determined by variations in climatic and topographic conditions, among which altitude and precipitation have the greatest effect on forest growth. In the southern portion of the belt Douglas fir and red cedar are the principal species at altitudes below 2,000 or 2,500 feet. With these are associated western hemlock, western white pine, Sitka spruce and the *amabilis* and lowland firs. Toward the north and at higher altitudes, Douglas fir disappears and red cedar and hemlock are the important trees, with Sitka spruce, *amabilis* fir and yellow cedar as subsidiaries. On the northern end of Vancouver island, the Queen Charlotte islands and the adjacent coast Sitka spruce and western hemlock form a lowland type.

In the Interior Dry Belt, *ponderosa* or western yellow pine predominates at low altitudes bordering on the grass lands. With rising altitude Douglas fir gradually increases in importance until it predominates at elevations up to 3,500 and 4,500 feet. Western larch covers a limited area usually between the true yellow pine and Douglas fir types. At the northern latitudinal and upper altitudinal limits of the Douglas fir type, an Engelmann spruce type develops, which merges into a spruce-alpine fir type at still higher altitudes. Lodgepole pine has taken the place of Douglas fir, Engelmann spruce and, in some cases, yellow pine on burned-over areas and has become, to a considerable extent, established as a distinct type.

Forest types similar to those of the coast have developed in the Interior Wet Belt. In the southern portion of this belt, red cedar predominates in the wetter situations, mixed with Douglas fir, Engelmann spruce, white pine, hemlock, western larch, alpine fir, lowland fir and cottonwood. On the benches and lower valley slopes, hemlock and cedar are the important species. Engelmann spruce replaces hemlock at higher elevations, cedar gradually disappears and the spruce-alpine fir type stretches up to timber line. To the north, Engelmann spruce and alpine fir are more prominent and the other species are gradually eliminated.

The Rocky Mountain Belt includes portions of the Dry Belt types to the south and those of the Interior Wet Belt further north. Otherwise the typical forest of the Rocky mountains is made up of Engelmann spruce and some white spruce, with an increasing proportion of alpine fir as the altitude increases. This type has suffered so severely from fire, especially on the dry eastern slopes, that lodgepole pine has established itself permanently in some cases and temporarily in others on burned-over areas.

In the Sub-Arctic Belt, comprising the Yukon plateau and that part of the Rocky Mountain system north of 58°, the general elevation is over 4,000 feet, the climate is severe, the growing season short and precipitation scant. As a result, tree growth is slow and confined to favourable sites in valleys. The timber is small

and of poor quality. It is, however, of great local value in the mining industry and to trappers. The principal type is the spruce-alpine fir, with lodgepole pine on poorer sites, and poplar and willow on richer soils on burned-over areas.

Most of the commercially important species of the Cordilleran Region are confined to British Columbia. The spruce-fir-lodgepole pine type of the northern interior extends across the Rockies into the foothills of Alberta. Certain species, such as Douglas fir, Engelmann spruce, alpine fir and lodgepole pine, are also found in western Alberta, but in few cases do they extend any great distance eastward.

**The Forests of the Great Plains.**—The Great Plains Region may be divided into the Prairie, Semi-Prairie, Northern Forest and Sub-Arctic Belts. There are no great variations in altitude in the region, and latitude and soil conditions, especially drainage, determine the distribution of forest types. The Prairie Belt in southern Alberta, Saskatchewan and Manitoba extends north from the International Boundary for 200 to 400 miles. Patches of tree growth in protected situations are made up chiefly of aspen poplar, with some white spruce and jack pine. North of the prairies there is a transition belt in which a large proportion of the area is covered with poplar interspersed with open grasslands. The soil in this belt is for the most part of agricultural value and the timber of little commercial value except for local consumption. North of this agricultural and pastoral area is the great Northern Forest Belt, from 300 to 400 miles wide, which extends from Alaska to Labrador, covering the greater part of the Laurentian Shield as far as the limits of commercial tree growth. Originally, white spruce predominated over this entire belt and it still forms the most important type commercially, although it has suffered severely through forest fires. In the East, balsam fir is an important associate, and the spruce-balsam fir type makes up most of the pulpwood resources of Eastern Canada. The black spruce type, frequently associated with eastern larch (tamarack), occupies poorly-drained areas within this belt. Large areas in this belt have been burned over and the spruce and balsam replaced, at least temporarily, by aspen and white birch on the heavier soils, and by jack pine on the sandy sites. Jack pine, aspen and balsam poplar reach a higher development along the Peace river in northern Alberta than they do elsewhere in America. Along its northern margin this belt merges into the sub-Arctic "tundra", with tree growth confined to narrow strips along waterways. Vigorous tree growth and fairly large timber are found along these shallow valleys as far north as 67°, indicating that soil conditions, especially drainage, are more important than climate in defining the limits of tree growth. To the northward, balsam fir disappears early from the forest growth, followed by balsam poplar, jack pine, aspen and paper birch, leaving white spruce, black spruce, tamarack or larch, and willow to define the northern limit of tree growth. This may be roughly indicated by a line drawn from the mouth of the Mackenzie river on the Arctic ocean to the mouth of the Churchill river on Hudson bay and across the Labrador peninsula at about 58° N. latitude.

**The Eastern Forests.**—In southeastern Canada a number of belts of forest growth with distinctive characteristics are recognized. The hardwood belts include the Carolinian Zone, confined to the north shore of lake Erie and the western part of lake Ontario. This is important only as forming the northern fringe of a type which covers a large area in the central Eastern United States, and includes a number of species such as tulip, sassafras, etc., not found elsewhere in Canada. North of this zone, still in the purely agricultural and pastoral area, the original forests were of the commercially important hardwoods, such as maple, elm, bass-

wood, oak, yellow birch, hickory and beech, with patches of pine, hemlock and other conifers on the lighter soils. This area has been largely cleared and devoted to agriculture, and the original forest type is to be seen only on farmers' woodlots.

Since the beginning of the lumbering industry in Canada, the region north of this belt, extending, roughly speaking, to the height of land between the St. Lawrence and Hudson Bay waters, has been the centre of the most extensive exploitation, and still occupies that position as far as Eastern Canada is concerned. The forest types which still exist in this region vary considerably, owing to soil and other conditions, but, generally speaking, white pine occupies the better situations on the lighter soils and reaches its highest development in this belt. With it is frequently associated the red or Norway pine. On heavier soils, spruce, hemlock and the tolerant hardwoods also form an important part of the stand. Cedar, tamarack and black spruce form typical stands in poorly drained situations. Hardwood ridges, carrying chiefly maple and yellow birch, occur in the southern part of this belt. These, with hemlock, extend north to a line running approximately from the northeast corner of lake Superior to the mouth of the Saguenay river. The extensive lumbering operations of the past century, together with repeated forest fires, have greatly modified these original types. The exclusive cutting of white and red pine, practised until recently, has resulted in the displacement of these species by spruce, balsam fir, jack pine and the hardwoods, the spruce-balsam fir pulpwood areas being the most valuable type remaining. Jack pine has come in extensively on burned-over areas on lighter soils and in some cases has taken permanent possession of such sites. On account of its value for railway ties and pulpwood and the ease with which it can be grown it is not at all an undesirable species to perpetuate. Aspen and paper birch are also rapidly becoming established as temporary types. Along its northern border, this mixed hardwood and softwood type merges into the northern forest belt already described, with the disappearance of first the hemlock and the tolerant hardwoods and then the white and red pines.

The Acadian Belt covers the Maritime Provinces and the south shore of the St. Lawrence in Quebec. The forest is similar to that of the New England States, being characterized by red spruce. With this are found varying proportions of white spruce and balsam fir. In the mixed softwood and hardwood type, which also occurs in this belt, white pine and hemlock occur, with yellow birch, maple and beech representing the commercial hardwoods. Cedar is fairly abundant in the western portion of this region. Burned-over areas in the Acadian Belt are chiefly occupied by aspen and white birch as temporary species.

### Section 3.—Important Tree Species.

In Canada there are approximately 125 species or distinct varieties of trees. Only 33 of these are conifers commonly known as "softwoods", but they comprise over 80 p.c. of the standing timber and 70 p.c. of the wood utilized for all purposes. While the number of deciduous-leaved or "hardwood" species is large, only about a dozen are of a commercial importance comparable with twice the number of conifers. The principal use for the hardwoods is for fuel, though increasing amounts are being manufactured into lumber, railway ties and veneers. A detailed description of the more important species of Canadian forest trees was given on pp. 282-285 of the 1924 Year Book.

### Section 4.—Forest Resources.

**Areas.**—The total land area of Canada, revised according to the Labrador Boundary Award of 1927 and the latest surveys, is estimated at 3,466,793 square miles, of which 564,000 square miles is considered as being suitable for agricultural or pastoral purposes. According to the Census of 1931 about 255,094 square miles of this agricultural land was occupied and about 133,220 square miles was improved.

The total area covered by existing forests has been estimated at 1,153,000 square miles, including 26,652 square miles of occupied agricultural land still forested. Most of this will no doubt be left under forest cover in the form of farmers' woodlots. There is also a considerable area of forest land which is of agricultural value and will eventually be cleared but it is estimated that 1,100,000 square miles is essentially forest land which can best be utilised for forest production (See Table 8, p. 41).

The accessible and productive forest area is estimated to be 791,670 square miles of which 378,945 square miles carries timber of merchantable size and on 412,725 square miles there is young growth which if protected from fire will eventually produce merchantable timber. The remaining area of 361,330 square miles carries forests of value either because of their influence on water control, climatic conditions, game conservation, or by reason of their attraction to tourists and their value as a source of wood for local use. On account of their geographical location or because of unfavourable growth conditions these forests at present are considered as non-productive from a commercial viewpoint.

As a result of the constant and inevitable improvement in conditions affecting profitable exploitation, such as the extension of settlement and transportation facilities, the increasing world scarcity of forest products, and the ever increasing demand for these products, due to the development of industry, the discovery of new uses for wood, and the improvements in the methods, equipment and machinery used in logging and manufacturing forest products, most of this inaccessible timber will eventually become commercially exploitable. It is estimated that of the accessible forest area 481,790 square miles is producing softwood or coniferous timber, 213,590 square miles, mixed softwoods and hardwoods and 96,290 square miles, hardwood or broad-leaved species.

In Canada as a whole about 8.4 p.c. of the total forest area has been permanently dedicated to forest production. Previous to the transfer of the natural resources to the western provinces in 1930, some 33,023 square miles of this reserved area comprised national forests but these have now in large part become provincial forests. The distribution of provincial forests, provincial parks and national parks among the various provinces is shown in the following statement.

FOREST RESERVES AND PARKS IN CANADA, 1934.

| Totals.....           | 97,627                            | 12,921               | 12,059.88             |

<sup>1</sup> Not including the Wood Buffalo Park, partly in Alberta and partly in the Northwest Territories, and the Tar Sands Reserve. These areas are not administered as National Parks.

Of the total forest area, less than 10 p.c. has been permanently alienated, being owned in fee simple by private individuals or corporations. The Crown still holds title to 13.2 p.c. of the area but has alienated the right to cut timber thereon under lease or licence. So far 77.2 p.c. has not been alienated in any way. It may be said that 90.4 p.c. of Canada's forest area is still owned by the Crown in the right either of the Dominion or the provinces and, subject only to certain temporary privileges granted to limit-holders, may at any time be placed under forest management and dedicated to forest production.

**Volume of Standing Timber.**—In 1932 the total stand of timber in Canada was estimated to be approximately 266,844 million cubic feet, of which 216,236 million cubic feet was of coniferous species and 50,608 million cubic feet of broad-leaved species.

During the years 1926-30, which were typical of pre-depression conditions, the average annual depletion due to use was approximately 2,000 million cubic feet of conifers and 970 million cubic feet of hardwoods. The average annual loss from fire was estimated at 185 million cubic feet of conifers and 45 million cubic feet of hardwoods. Though no widespread epidemics of insects or fungous diseases have occurred in recent years, local infestations which cause considerable loss develop practically every year. In Nova Scotia, in 1931, the balsam suffered severely from "gout" induced, it is believed, by minute sucking insects of the genus *Dreyfusia*, previously undescribed. In the Gaspé peninsula the spruce saw-fly became a serious menace. In the absence as yet of any basic data on which to estimate the annual depletion from these causes, it may be taken as 700 million cubic feet. The total annual depletion during the five-year period was therefore estimated to have been about 3,900 million cubic feet. To what extent this loss has been replaced by growth increment is not known but, considering the preponderance of the younger age classes in the reproduction, it is believed there has been a considerable net depletion in the merchantable age classes.

Another real difficulty is the division of the existing stand into merchantable timber and that which is inaccessible or unprofitable, since merchantability depends not only on the location but on the density of the stand, the demands of the market for certain species or qualities of product, and the regulations as to cutting. Light stands covering large areas may in the aggregate carry very large amounts of timber and still not be exploitable at a profit. For some species, such as aspen and white birch, which comprise three-quarters of the hardwoods, there is very little demand, and therefore these cannot properly be classed as merchantable, though accessible as far as location is concerned.

In June, 1929, a conference of the Dominion and provincial forest authorities was held in Ottawa and it was decided to undertake a national inventory of the forest resources of Canada, each authority conducting the necessary stock-taking surveys on the land under its jurisdiction. In connection with the inventory definite data are being secured regarding the depletion due to use, fire, insect damage, etc., and the increment accruing. Five years was set as an objective for the completion of an inventory of at least the more accessible parts of the area but, though considerable progress has been made, the disturbed financial conditions have retarded the work in practically every province. The Forest Service of the Department of the Interior acts as a clearing house for the national inventory, and in addition to collecting and compiling the data furnished by the provincial authorities has conducted the inventorial work in the Prairie Provinces and New Brunswick.

The Dominion Service is also carrying on extensive surveys to determine the increment taking place in the forests and conducting more intensive silvicultural research at forest experiment stations located in Alberta, Manitoba, Ontario, Quebec and New Brunswick.

Under present conditions it is doubtful whether more than 135,000 million cubic feet of conifers and 30,000 million cubic feet of hardwoods can be considered as accessible.

**1.—Estimate of Total Accessible Stand of Timber in Canada, by Regions and Classes, with Estimate of Grand Total Stand, 1933.**

## Section 5.—Forest Administration.

### Subsection 1.—Administration of Dominion and Provincial Timber Lands.

In Canada the general policy of both the Dominion Government and the Provincial Governments has been to dispose of the timber by means of licences to cut, rather than to sell timber land outright. Under this system the State retains the ownership of the land and control of the cutting operations. Revenue is derived in the form of stumpage bonuses (either in lump sums or in payments made as the timber is cut), annual ground rent, and royalty dues collected as and when the wood is removed. Both ground rent and royalty dues may be adjusted at the discretion of the Governments so that the public may share in any increase in stumpage values or, as has happened, reductions may be made in the rates if conditions demand them.

The Maritime Provinces did not adopt this policy to the same extent as did the rest of Canada. In Prince Edward Island all the forest land has been alienated and is in small holdings, chiefly farmers' woodlots. In Nova Scotia 76 p.c. of the forest land is privately owned; nearly half of this is in holdings exceeding 1,000 acres. In New Brunswick nearly 50 p.c. has been sold, and 20 p.c. is in holdings exceeding 1,000 acres. The percentage of privately-owned forest land in the other provinces is as follows: Quebec, 7 p.c.; Ontario, 3.3 p.c.; Manitoba, 11.3 p.c.; Saskatchewan, 10.4 p.c.; Alberta, 15.7 p.c. and British Columbia, 13 p.c.

Until 1930 the Dominion Government administered the Crown lands, including timber lands, in the provinces of Manitoba, Saskatchewan and Alberta, in the Railway Belt and Peace River Block of British Columbia, and in Yukon and the North-

west Territories, but the forests as well as the other natural resources in the western provinces have now been transferred to provincial control. In all cases timber lands are now administered by the provinces in which they lie. As new regions are explored their lands are examined and the agricultural land disposed of. Absolute forest land is usually set aside for timber production, and the policy of disposing of the title to lands fit only for the production of timber has been virtually abandoned in every province in Canada. The ownership of forests by towns and communities, so common in Europe, is now beginning in Canada. Efforts are being made, especially in Quebec and Ontario, to encourage the establishment and maintenance of forests on this basis.

**Timber Lands under Dominion Control.**—The National Parks of Canada Branch of the Department of the Interior administers the Dominion parks, now embracing about 29,363 square miles. These are primarily national playgrounds and game preserves, the timber being practically withdrawn from commercial use. The Dominion Lands Administration of the Department of the Interior administers and protects forest land lying north of the provincial areas. The Department of Indian Affairs administers, in trust for the Indians, all timbered areas within their reservations. The Board of Railway Commissioners has charge of fire protection along practically all the railway lines in Canada.

**Forest Administration in the Prairie Provinces.**—Upon the transfer of the natural resources in 1930, each province took steps toward the creation of an adequate forest service with a Provincial Forester in charge. In Manitoba the service is under the Department of Mines and Natural Resources and in its forest regulations, framed under the Manitoba Forest Act, the former Dominion Forest Reserves and Crown Timber Regulations are very largely incorporated. In Saskatchewan and Alberta a closely similar policy is being followed. In every case the central object of policy is to safeguard the regeneration of valuable species in the natural forest types. The national forests in these provinces have practically all been retained as provincial forests and some additional reserves have been established, making a total area of 32,458 square miles. Approximately 27,335 square miles of forest lands in the Prairie Provinces are privately owned.

**British Columbia.**—In the province of British Columbia, the Forest Branch of the Department of Lands has administered timber lands since 1912. All unalienated lands in the province which are found to be better suited to forest than to agricultural production are dedicated to forest production, and all timber lands carrying over a specified quantity of timber are withdrawn from disposal until examined by the Forest Branch. During the last few years 15,964 square miles have been set aside permanently for forest purposes. The present practice is to sell cutting rights for a stated period by public competition but licences to cut, which are renewable annually in perpetuity, have been granted for a large proportion of the accessible timber. The royalties are adjusted periodically on the basis of prevailing industrial conditions. About 18,150 square miles of timber land are privately owned.

**Ontario.**—Forest administration is carried out in Ontario under the Department of Lands and Forests, which is subdivided into two divisions each under a Deputy Minister. The Lands and Forests Division controls timber sales and the Forestry Division has charge of reforestation, protection, air service, forest surveys and investigations. The Forestry Board, consisting of representatives of forest industries, the University of Toronto Faculty of Forestry and the Deputy Minister of Forestry, acts in an advisory capacity.

In recent years the sale of saw timber has been by tender after examination, with conditions covering the removal within a specified period, disposal of debris, etc. Much of the merchantable timber is at present held under licences granted in the past and renewable indefinitely. Pulpwood areas are usually disposed of by individual agreements for longer periods than in the case of saw timber. Manufacture in Canada was made a condition in the disposal of all softwood saw timber in 1897, of all pulpwood in 1900 and of all hardwood in 1924. In some individual pulpwood agreements the licensee must undertake not only to erect a pulp-mill but also a paper-mill within the province, the type of mill being stipulated in the agreement. In this province about 7,972 square miles of forest land have been disposed of outright. Provincial forest reserves cover 19,607 square miles.

**Quebec.**—The Forest Service of the Department of Lands and Forests administers the timber lands in Quebec. Its powers include classification of land, disposal of timber and regulation of cutting operations. Since 1924 forest protection has been under a separate organization, the Forest Protective Service. Licences are granted after public competition and are renewable from year to year, subject to changes in royalty by the Government at any time. Grants of land in fee simple, made in some cases under the French *régime* in Quebec, are responsible for the private ownership of about 34,173 square miles of forest land. An area of 28,960 square miles has been reserved for forestry purposes.

**New Brunswick.**—The Forest Service, under the Department of Lands and Mines, and a special Forestry Advisory Commission are the forest authority in New Brunswick. The Forestry Advisory Commission, consisting of the Minister of Lands and Mines, the Deputy Minister, the Chief Forester, a lumberman representing the licensees of Crown lands, and one representing the private timberland owners, is appointed to advise on matters of policy. At present timber lands are disposed of as in the other provinces, but in the past several grants of forest land were made to railway companies, private concerns and individuals, who now own in fee simple about 10,675 square miles of forest land.

**Nova Scotia.**—In Nova Scotia the greater part of the forest land, amounting to 12,000 square miles, has passed into private ownership, but the system of disposal of timber by licences to cut is now being followed. What remains vested in the Crown is administered by the Chief Forester under the Minister of Lands and Forests. Under the Minister, the Chief Forester has charge of forest protection, surveying and sealing throughout the province.

### Subsection 2.—Forest Fire Protection.

The protection of forests from fire is undoubtedly the most urgent and most important part of the work of the different agencies administering forest lands in Canada. Except for the forests of the National Parks and the Northwest Territories and Yukon, which remain under Dominion control, the administration of forest lands is now the function of the individual provinces. Up to the end of the fire season of 1930, the Forest Service of the Department of the Interior was responsible for fire protection in the prairie provinces of Manitoba, Saskatchewan, and Alberta, and the Railway Belt of British Columbia. However, by reason of the transfer of natural resources from Dominion to provincial control, their administration is now a matter of provincial concern.

Each of the Provincial Governments, except that of Prince Edward Island, maintains a fire protection organization co-operating with owners and licensees for the protection of all timbered areas, the cost being in part distributed or covered by special taxes on timber lands. In each province, with the exception just mentioned, provincial legislation regulates the use of fire for clearing and other legitimate purposes, and provides for closed seasons during dangerous periods. An interesting development in this connection in the province of Quebec is the organization of a number of co-operative protective associations among lessees of timber limits. These associations have their own staffs which co-operate with those of the Board of Railway Commissioners and the Provincial Government. The latter contributes money grants and also pays for the protection of vacant Crown lands lying within the area of the associations' activities.

In the matter of forest fire protection along railway lines, the provincial services are assisted by the Dominion Railway Act administered by the Board of Railway Commissioners. This Act gives to that body wide powers relating to fire protection along railway lines under its jurisdiction in Canada. Certain officers of the various forest authorities are appointed *ex officio* officers of the Board of Railway Commissioners. These officers co-operate with the railway fire-ranging staffs employed by the various railway companies, the compulsory control of all lines coming under the jurisdiction of the Board being one of the requirements of the Dominion Railway Act.

The most important single development of late years in forest fire protection has been the use of aircraft for the detection and suppression of incipient forest fires. Where lakes are numerous, flying boats can be used for detection and for the transportation of fire fighters and their equipment to fires in remote areas. Specially developed aircraft equipped with wireless are employed on forest fire-protection operations; these enable the observer to report the location of a fire as soon as it has been detected. Aircraft are now being used extensively for exploring remote areas and mapping forest lands by means of aerial photography. Waste lands and the various forest types can be mapped more accurately and more economically by this means than by ground surveys. As a general rule aircraft are used in the more remote districts, while lookout towers, connected by telephone lines or equipped with wireless, are established in the more settled and more travelled forest areas. While these agencies have to a large extent supplanted the old canoe, horseback and foot patrol for detection of fires, a large ground staff with its equipment stored at strategic points will always be necessary for the fighting of larger fires and the maintenance of systems of communication and transportation, and of fire lanes and fire guards in the forest.

The most important improvement in forest fire-fighting equipment has been the portable gasoline pump. These pumps, which each weigh from 45 to a little over 100 pounds, can be carried to a fire by canoe, motor boat, automobile, aircraft, pack saddle or back pack. They can deliver efficient water pressure as far as seven thousand feet from a water supply and, when used in relays, at a much greater distance. Smaller hand pumps are also used effectively in many cases.

In addition to these improved measures, the enactment of legislation has tended to reduce the fire menace. The establishment of closed seasons for brush burning, and seasons during which permits are required for setting out fires and for travel in the forest during dangerous dry periods, have been of enormous value as preventive measures.

Since its beginning in 1900, the Canadian Forestry Association has played an important part in securing popular co-operation in reducing the fire hazard. By means of its attractive magazine, which has a circulation of over 16,000, railway lecture cars and motor trucks provided with motion picture equipment, and by co-operation with radio broadcasting stations and the press, the Association reaches a large proportion of the population of the Dominion. Special efforts are made through the schools, by specially appointed junior forest wardens and other means to educate the younger generation as to the value of the forests, the devastation caused by fire and the means of preventing such destruction.

Prepared lectures illustrated by slides and films are distributed to volunteer lecturers and other educational work is carried on in schools and at public meetings. The various governmental forest authorities also carry on forest conservation publicity work independently and in co-operation with the Canadian Forestry Association.

Another interesting development in forest protection has been the establishment of special meteorological stations for the study of the effects of weather conditions on the fire hazard, and the broadcasting of special forecasts of hazardous fire weather.

### **Subsection 3.—Scientific Forestry.**

Up to the present, the practice of forestry in Canada has consisted chiefly in the administration and protection of existing forest areas. About 35 square miles is now being planted out annually, largely in connection with farmers' woodlots, shelter belts, and reclamation work, while several commercial reforestation projects have been carried on by paper companies and by the Ontario Government on denuded Crown lands. The great forestry problem in Canada, however, is the management of Crown forests, first under provisional and later more intensive working plans, so as to ensure a sustained yield. To this end, forest research activities are now assuming great importance. Silvicultural investigations are receiving marked attention both from the Dominion services and some of the provincial services.

About 250 technical foresters find employment either under the Dominion and provincial forest services or with paper and lumber companies. In addition to administrative work, these men carry on forest surveys either for the estimation of timber stands and making of maps, or to determine natural growth and reproduction conditions and factors. They also direct any planting or nursery work and direct the regulation of commercial logging operations along forestry lines.

The Research Division of the Dominion Forest Service has established permanent forest experiment stations at Petawawa, Ontario, and at Lake Edward, near Grand'Mère, in Quebec, and carries on similar experimental work at other points throughout Canada. A considerable amount of this work is done in co-operation with provincial forest services and with pulp and lumber companies.

The Forest Service of the Department of the Interior is now conducting a National Forest Inventory in co-operation with the various Provincial Governments (see p. 318). An important feature is that the Forest Service is carrying on special rate-of-growth surveys in each province to determine the nature and extent of the natural reproduction and the annual increment now being secured under varying conditions of site and type, following cutting or forest fires. The valuable silvical data thus obtained will provide a sound basis for future forest policies.

Another important phase of forest research is found in the work of the Dominion Forest Products Laboratories in determining the best methods of forest utilization, that is, the converting of standing timber into saleable commodities with a minimum of waste. These laboratories, established by the Dominion Forest Service at Ottawa and in connection with the University of British Columbia at Vancouver, carry on investigatory work in forest products, covering the strength, durability and other mechanical, physical and chemical qualities of Canadian woods, methods of seasoning, preservation from decay, and chemical utilization in wood distillation and other industries. A special pulp and paper division of the laboratories is located in Montreal, the recognized business centre of the industry, in the Cellulose Institute of the Canadian Pulp and Paper Association. The division is in close co-operation in this connection with the Association and with McGill University. Much credit is due to the forestry departments of some of the pulp companies for pioneering work in forest research.

Education in forestry and allied subjects and opportunities for research are offered by four Canadian universities and by other agencies. The University of Toronto, the University of New Brunswick and the University of British Columbia, provide four-year courses leading to a professional degree. The School of Forestry and Surveying in connection with Laval University at Quebec provides, in the French language, a combined course of four years duration leading to diplomas in both sciences. The Government of Quebec has established a school in paper-making at Three Rivers in the heart of the paper industry; several agricultural colleges provide short courses in farm forestry and a school for forest rangers has been established at Berthierville by the Quebec Forest Service.

The practice of forestry by individuals and private concerns is encouraged by the furnishing of expert advice by Dominion and provincial services and by the distribution of tree-planting material. The Dominion Department of Agriculture maintains two nurseries in Saskatchewan, one at Indian Head and the other at Sutherland, near Saskatoon. Over 7,000,000 trees are distributed annually to farmers and ranchers in the Prairie Provinces for planting woodlots and wind-breaks. If certain conditions are fulfilled, the material and instructions are provided free except for transportation charges. A total of over 125,000,000 trees has been distributed.

The province of Ontario provides material under similar conditions and distributes to woodlot owners at least 7,000,000 trees annually from its five nurseries. As many more are being provided for the creation of county forests, demonstration forests and plantations on denuded Crown lands. To encourage the establishment of communal forests by towns and other municipalities, the Provincial Government undertakes to plant, free of charge, any area purchased by the municipality for this purpose. The Government also assists counties that purchase areas of not less than 1,000 acres of land for forest purposes. As a result of these inducements there are at present, scattered throughout the province, 50 communal forests (owned by municipalities) and eight of the larger county forests. Farm land used for forestry purposes, while so used, is exempt from taxation up to 10 p.c. of the total farm area but not exceeding a total of 20 acres.

In Quebec, a forest nursery at Berthierville serves as a demonstration station for the School of Forestry and as a location for the forest ranger school. It provides trees for sale and distribution in the province, comprising seedlings and transplants

for forest planting and larger trees for ornamental purposes. The capacity of the nursery is about 10,000,000 trees. Provision is made by legislation for the creation of communal forests and there are now 76 of these, covering 594,059 acres.

### Section 6.—Forest Utilization.\*

**Historical.**—The forest has always played a large part in the life of the pioneer in Eastern Canada, providing him with building material and fuel but opposing his agricultural efforts. The material removed in clearing the first fields was usually more than sufficient for his needs, and in many cases what would now be considered valuable timber was burned by the early settler. Local trade in lumber began in New France shortly after 1650. The first attempts at forest conservation took the form of setting aside areas of timber for the use of the navy, and the first exports were of shipbuilding material and spars. Sawmills were established along the St. Lawrence before the close of the seventeenth century. While there was no recorded transatlantic trade in forest products other than naval supplies, shipments of lumber and staves were made to the French West Indies during the French *régime*. Shipbuilding became an important local industry and gave rise to considerable forest exploitation.

Transatlantic trade began to develop after the Conquest, stimulated by bounties and tariff privileges granted with the object of reducing England's dependence on Baltic supplies, especially in connection with naval material. This trade, however, did not develop satisfactorily until the beginning of the nineteenth century, when Napoleon succeeded in interfering seriously with British imports of wood from the Baltic. The export of timber from Canada increased enormously, and the square-timber trade in white pine and oak spread from the St. Lawrence and Richelieu valleys to Lake Champlain and Upper Canada, especially the Ottawa valley. This trade reached its height in the '60's and has steadily declined since that time.

Sawmilling on a large scale followed the square-timber trade and the establishment of small custom mills followed in the wake of the settler. The building of wooden ships in the St. Lawrence valley and the Maritime Provinces developed hand in hand with the lumber industry, providing a local demand for timber and a means of exporting it overseas. The British preferences were reduced and finally abolished about 1860.

The export trade in sawn lumber to the United States developed from 1820 to 1830 and gradually replaced the more wasteful overseas square-timber trade, but it was not until after Confederation that the export of sawn lumber by sea exceeded that of square timber.

Encouraged by the free entry of raw materials into the United States, an important trade developed, especially in Ontario, in the exportation of sawlogs to be sawn into lumber in United States mills. The Provincial Government prohibited the exportation of this material, when cut on Crown lands, about 1900 and effectively checked this economic loss. Similar legislation has since been passed by the Dominion and the other Provincial Governments and has been extended to pulpwood and other raw or unmanufactured forest products.

The lumber industry which began in Quebec and New Brunswick and extended into Upper Canada has since moved gradually through southern Ontario, along the upper Ottawa and its tributaries, around Georgian bay into northern Ontario and through the Lake of the Woods and Rainy River districts. It is still an important

\*An article on "The History of the Canadian Lumber Trade", by A. R. M. Lower, M.A., appears at pp. 318-323 of the 1925 edition of the Canada Year Book.

industry in these regions. Lumbering to the north of the prairies, where the timber was never particularly large nor abundant, has progressed with the settlement of the district but the production does not usually exceed the local demand. In 1908 British Columbia provided less than a fifth of Canada's lumber production but in 1932 this proportion had increased to more than fifty per cent, showing the westward movement of the centre of production. British Columbia has added several new tree species to the lumber market and at present possesses the heaviest stands and the largest individual trees in Canada.

Remarkable developments in the manufacture of pulp and paper early in the twentieth century led to a remarkable increase of forest exploitation in Eastern Canada, giving rise to an industry which surpassed the manufacture of lumber and is to-day the most important manufacturing industry in Canada and the source of the greatest single item in our exports next to wheat.

### Subsection 1.—Woods Operations.

Differences in forest conditions throughout Canada give rise to differences in logging methods. Generally speaking, throughout Eastern Canada the climate is such that the cutting and hauling of logs can be carried on most economically during the fall and winter months. The trees are felled and the logs hauled to the nearest stream or lake, where they are piled on the ice or sloping banks. The presence of connected systems of lakes and streams makes it possible in most cases to float the logs from the forest to the mill at a minimum cost during the annual spring freshets. The logging industry east of the Rocky mountains is therefore almost entirely seasonal. In many cases lumbermen co-operate in river-driving operations and improvement companies, financed by the logging operators, build river improvements to facilitate the passage of the floating logs, the logs being finally sorted and delivered to their respective owners. In British Columbia the scarcity of drivable streams and the greater average size of the logs give rise to entirely different logging methods. Logs are assembled by cable systems operated by donkey engines and are transported to the mills or to water chiefly by logging railways but in some cases by motor trucks. These operations are more or less independent of frost, snow or freshet and are carried on in most cases throughout the entire year.

In Eastern Canada logging operations are usually carried on by the mill owners or licensees of timbered lands, often through the medium of contractors, sub-contractors and jobbers. In the better-settled parts of the country a considerable quantity of lumber is sawn by custom sawmills or small mills purchasing logs from the farmers. Unmanufactured pulpwood, poles, ties and other forest products have a market value, but sawlogs, being as a rule the property of the mill-owner, are not generally marketed as such in Eastern Canada. In British Columbia logging is carried on more frequently as a separate enterprise by limit-holders, who cut and sell logs on the market. In many cases mill operators are not limit-holders but buy their entire supplies of raw material from logging concerns.

In connection with operations in the woods it should be borne in mind that the forests not only provide the raw material for the sawmills, pulp-mills, wood distillation, charcoal, excelsior and other plants but that they also provide logs, pulpwood and bolts for export in the unmanufactured state, and fuel, poles, railway ties, posts and fence rails, mining timber, piling and other primary products, which are finished in the woods ready for use or exportation. There are also a number of minor forest products, such as maple sugar and syrup, balsam gum, resin, cascara, moss and tanbark, which all go to swell the total.

Table 2 gives the total value of the products of woods operations in Canada for the years 1928 to 1932 inclusive. The exports and imports of forest products in the fiscal years ended Mar. 31, 1931-34 are shown in Tables 12 and 13 of the chapter on External Trade.

2.—Values of Woods Operations, by Products, 1928-32.<sup>1</sup>

| Product.                    | 1928.              | 1929.              | 1930.              | 1931.              | 1932.             |

<sup>1</sup>The value of woods operations for 1933, made available at the time of going to press, is \$93,773,143.

It has been estimated that operations in the woods in Canada in 1932 involved the investment of \$95,000,000 in logging equipment, gave employment for a part of the year equivalent to 60,000 man-years, and distributed over \$43,200,000 in wages and salaries. In estimating the annual drain on our forest resources, certain converting factors have been used. Each of these factors represents in cubic feet the quantity of standing timber that must be cut in the forest to produce one unit of the material in question, based on the total cubic contents of the tree. By the use of these factors it has been estimated that the total drain on our forest resources in 1932, due to consumption for use, amounted to 1,882,228,308 cubic feet. To this total must be added the volume of material destroyed by fire, insects and fungi, which would bring the average annual depletion for the period 1928-32 to approximately 3,815,000,000 cubic feet of standing timber. Table 3 gives the reported or estimated quantities of wood cut, by chief products, together with the respective converting factor, the equivalent in standing timber and the estimated value in each case for 1931 and 1932. Table 4 shows the extent of the drain on our forest resources in 1931 and 1932, by provinces.

**Subsection 2.—The Pulp and Paper Industry.**

The manufacture of pulp and paper is a comparatively recent development in Canadian industry. Paper was first manufactured in Canada about a hundred years ago but prior to 1860 no wood-pulp was used or produced. Rags, straw, esparto grass, cotton waste and other substances were the raw materials used. The first paper-mill was established at St. Andrews in Quebec (then Lower Canada) in 1803 by United States citizens who obtained concessions from the seigneurs. Upper Canada's first mill, which is still in operation, was built in 1813 at Crook's Hollow (now Greensville) near Hamilton, and the Maritime Provinces entered the industry in 1819 with a mill at Bedford Basin near Halifax.

In 1866, Alexander Buntin installed at Valleyfield, Quebec, what is claimed to have been the first wood grinder in America and began the manufacture of wood-pulp by the mechanical process. During the same year Angus Logan and Co. built the first chemical wood-pulp mill in Canada at Windsor Mills in Quebec. During the next decade the use of wood-pulp in paper-making was extensively developed and in 1887 Charles Riordon installed the first sulphite mill in Canada at Merritton in the Niagara Peninsula; by the beginning of the century the output of the industry had exceeded \$8,000,000. In 1907 the Brompton Pulp and Paper

Co. built, at East Angus in Quebec, the first mill in America to manufacture chemical pulp by the sulphate or kraft process.

The gross output of the industry increased rapidly and steadily until the boom years following the Great War, when it jumped to a peak of over \$232,000,000 in 1920. This was followed by a drop in 1921, following which there was a steady recovery, resulting in a total for 1929 of \$243,970,761 exceeding the abnormally high total value reported in 1920. This was followed by annual decreases down to 1933.

The rapid development of this industry up to 1929 was due chiefly to the existence in Canada of abundant water powers adjacent to extensive forest resources of pulpwood species and an increasing demand for newsprint paper in the United States. Summary statistics for the combined pulp and paper industry are given on p. 337.

There are to-day three classes of mills in the industry. These in 1933 numbered 28 mills making pulp only, 42 combined pulp and paper-mills, and 25 mills making paper only.

The industry in Canada includes three forms of industrial activity, the operations in the woods with pulpwood as a product, the manufacture of pulp and the manufacture of paper. These three stages cannot be treated as entirely distinct nor can they be separated from the different stages of the lumber industry. Some of the important pulp companies operate sawmills to utilize the larger timber on their limits to the best advantage, and many lumber manufacturers divert a proportion of their spruce and balsam logs to pulp-mills. So far as operations in the woods are concerned, it is often impossible to state whether the timber being cut will eventually be made into lumber or into pulpwood.

On account of legislation already referred to, pulpwood cut on Crown lands must, in every province, be manufactured into pulp in Canadian pulp-mills except under special permit. The pulpwood which is exported to the United States is therefore largely cut from private lands. Table 5 shows the annual production of this commodity from 1920 to 1933, together with the quantities used by Canadian pulp-mills and the quantities exported. For figures for the years 1908 to 1919, inclusive, see the 1931 Year Book, p. 288.

##### 5.—Production, Consumption, Exports and Imports of Pulpwood, calendar years 1920-33.

<sup>1</sup>Exports of pulpwood in the calendar year 1934 were 923,219 cords. <sup>2</sup>Revised since the publication of the 1933 Year Book.

In 1908 almost two-thirds of the pulpwood cut in Canada was exported in the raw or unmanufactured form but by 1916 the proportion had declined to two-fifths. In 1933 the proportion exported was less than one-fifth.

The manufacture of pulp is the second stage in this industry. This is carried on by mills producing pulp alone and also by paper manufacturers operating pulp-mills in conjunction with paper-mills to provide their own raw material. Such mills usually manufacture a surplus of pulp for sale in Canada or for export.

The supply of rags for paper-making is distinctly limited and the material too expensive for the manufacture of cheap paper. Early paper-makers experimented with fibres from the stems, leaves and other parts of numerous annual plants, but the small proportion of paper-making material recoverable from such sources led to experiments in the use of wood. Different species were tried, and finally spruce and balsam fir were found to be the most suitable for the production of all but the best classes of paper.

The preliminary preparation of pulpwood is frequently carried on at the pulp-mill, but there are in Canada a number of "cutting-up" and "rossing" mills operating on an independent basis, chiefly for the purpose of saving freight on material cut at a distance from the mill or on material intended for exportation. Pulpwood is measured by the cord (4' by 4' by 8' of piled material), which is approximately equivalent to 500 feet board measure or to 90 cubic feet of solid wood.

There are, in Canada, four methods of preparing wood-pulp, one of which is mechanical and three chemical. Detailed descriptions of these processes were given in the 1931 Year Book, pp. 290-291.

**Pulp Production.**—Table 6 shows the total production of pulp in Canada from 1920 to 1933 inclusive, together with the production of groundwood pulp and the production of fibre by the chemical processes described. Comparable statistics for 1908 to 1919 inclusive appear at p. 293 of the 1931 Year Book.

<sup>1</sup>The totals for 1920-32 include some unspecified pulp.  
Year Book.

<sup>2</sup>Revised since the publication of the 1933

The growth of this industry was steady up to 1920, when 1,960,102 tons of pulp were produced. There was a drop in production in 1921, but production in 1922 more than overtook the previous years drop. Following this, with the exception of 1924, each year up to 1929 showed consistent growth in the annual production, 1929 creating a record for the industry with a production of 4,021,229 tons. This was followed by annual decreases down to 1932. The 1933 figure of 2,979,562 tons marks an increase of almost 12 p.c. over 1932.

## GROWTH OF WOOD-PULP PRODUCTION

1908-1933

## VARIATIONS IN PAPER PRODUCTION

1917-1933

During 1933 there were 28 mills manufacturing pulp only and 42 combined pulp and paper mills. These 70 establishments turned out 2,979,562 tons of pulp, valued at \$64,114,074, as compared with 2,663,248 tons of pulp, valued at \$64,412,453 in 1932. Of the 1933 total for pulp, 2,225,540 tons, valued at \$37,729,011, were made in the combined pulp and paper-mills for their own use in manufacturing paper. Of the remainder, 124,239 tons, valued at \$4,235,902, were made for sale in Canada, while 629,783 tons, valued at \$22,149,161, were made for export. As in the case of pulpwood, a part of the product at this stage of the industry provides raw material for the later stages, while the remainder has a definite market value as pulp.

Over 61 p.c. of the production in 1933 was groundwood pulp and over 18 p.c. unbleached sulphite fibre, these two being the principal components of newsprint paper. Bleached sulphite, sulphate and soda fibre made up the remainder, with screenings, for which a considerable market has developed in recent years in connection with the manufacture of rigid insulating boards. Table 7 shows the production of pulp by provinces in the last six years.

<sup>1</sup>Includes production in British Columbia, Manitoba, New Brunswick and Nova Scotia.

**Pulp Exportation.**—The following table gives the quantities of pulp exported by the principal pulp-producing countries of the world in 1933. Figures for 1913, the year immediately preceding the War, and for 1932 are shown for comparison. Figures of the exports of wood-pulp from Canada in the fiscal years ended Mar. 31, 1931-34, will be found in Table 12 of the chapter on External Trade. In the calendar year 1934 the exports of wood-pulp from Canada were 605,641 tons.

The total exports of the ten principal pulp-exporting countries of the world in 1933 were 6,052,338 short tons, of which Canada contributed about 10 p.c.

# PULPWOOD PRODUCTION, CONSUMPTION, EXPORT AND VALUE PER CORD.

1908 — 1933

## AVERAGE VALUE PER CORD

**Paper Production.**—The paper-making stage of the industry involves the consumption of wood-pulp and other paper stock in the manufacture of paper and other pulp products. Accurate annual statistics for this part of the industry are available only for the years 1917 to 1933 inclusive. These are given in Table 9.

During 1933 there were 42 combined pulp and paper-mills and 25 mills making paper only. These 67 establishments produced 2,419,420 tons of paper, together with certain miscellaneous pulp products, with a total value of \$97,030,429, as compared to 2,290,767 tons, valued at \$114,115,570 in 1932. Newsprint paper forms over 80 p.c. of the annual paper production in Canada. In 1933, the production of newsprint paper was 2,021,965 tons, valued at \$66,959,501, reaffirming Canada in the position of largest producer of newsprint in the world. The preliminary estimate for 1934 is 2,599,292 tons.

### 9.—Summary of Paper Production in Canada, calendar years 1917-33.

<sup>1</sup> Revised since the publication of the 1933 Year Book.

Newsprint made up about 84 p.c. of the total paper production in 1933, with about 10 p.c. of paper boards, 3 p.c. of wrapping paper, 2 p.c. of book and writing paper and about 1 p.c. of other miscellaneous papers.

## 10.—Production of Paper in Canada, by Provinces, 1933.

| Province.                          | Quantity.        | Value.            |
|------------------------------------|------------------|-------------------|
|                                    | tons.            | \$                |
| Quebec.....                        | 1,138,032        | 45,583,472        |
| Ontario.....                       | 790,484          | 34,183,270        |
| British Columbia.....              | 262,301          | 8,885,395         |
| Nova Scotia and New Brunswick..... | 228,603          | 8,378,292         |
| <b>Totals.....</b>                 | <b>2,419,420</b> | <b>97,030,429</b> |

Quebec produced 47 p.c. of the total quantity, Ontario 33 p.c., British Columbia 11 p.c. and Nova Scotia and New Brunswick the remainder.

**World Production of Newsprint.**—The world production of newsprint in 1933 has been estimated at 6,421,000 short tons, of which North America supplied over 50 p.c. and Canada alone almost a third. The estimated production in the leading 23 countries, compared with 1932, and the five-year averages 1929-33, were as follows:—

## 11.—Estimated Quantities of Newsprint Produced in Leading Countries, 1932 and 1933, and the Five-Year Averages, 1929-33.

NOTE.—Countries by order of importance according to the 1933 production.

**Exportation of Newsprint Paper.**—In the fiscal year 1908, exports of printing paper were for the first time separately recorded, and valued at \$2,833,535. In the fiscal year 1913, when quantities were first shown, Canada exported 256,661 short tons valued at \$9,980,378. For the fiscal year ended Mar. 31, 1934, our exports of newsprint amounted to 2,024,057 tons valued at \$73,238,482 and ranked second only to wheat among the exports of the Dominion. For exports of newsprint and other paper in the fiscal years ended Mar. 31, 1931-34, see Table 12 of the chapter on External Trade.

As early as 1913 Canada led the world in the exportation of newsprint, and, since that date, her exports have increased more than seven-fold in quantity. The following table shows the exportation of newsprint from the 13 principal exporting countries in 1913, 1931, 1932 and 1933. Canada contributed to the total over 61 p.c. or more than all the other 12 countries combined in 1933. Canada's exports of newsprint paper for the calendar year 1934 were 2,399,624 tons.

## 12.—Exports of Newsprint Paper from Principal Paper-Producing Countries of the World, 1913, 1931, 1932 and 1933.

NOTE.—Countries arranged in order of importance of exports, 1933.

**Statistics of the Combined Pulp and Paper Industries.**—While the manufacture of pulp and that of paper are properly two industries, the existence of combined pulp and paper-mills makes it impossible to separate many of their statistics. Considering the manufacturing part of the industry as a whole, there were altogether 95 mills in operation in 1933 and 98 in 1932. The capital invested in 1933 amounted to \$559,265,544, the employees numbered 24,037 and their salaries and wages amounted to \$26,591,049. If we disregard pulp made "for own use" in combined pulp and paper-mills, the total value of the raw materials used in the industry as a whole amounted to \$47,632,521, and the gross value of production to \$123,415,492. The difference between these two, or the net value of production, represents the value added by manufacture and amounted in 1933 to \$75,782,971. The pulp and paper industry, now the leading single manufacturing industry in Canada, has been first in wages and salaries paid since 1922, when it first exceeded the sawmills. It has been the leading industry in gross value of production since 1925, when it replaced the flour mills, and also first in net value of production since 1920, when it outstripped the sawmills in this respect. Only the manufacturing stages of the industry are considered in these comparisons, no allowance being made for capital invested, men employed, wages paid nor primary products sold in connection with the woods operations. These form an important part of the industry as a whole but cannot be separated from woods operations carried on in connection with sawmills and other industries. If the \$4,696,459 worth of exported pulpwood be taken into consideration, the gross total contribution of the pulp and paper industry toward a favourable trade balance for Canada in 1933 amounted to \$94,809,504, representing the difference between exports and imports of pulpwood, pulp, paper and paper products.

The United States' market absorbs annually all of Canada's pulpwood exports, 80 p.c. of her pulp and 81 p.c. of her paper shipments. Of the pulp, 4 p.c. goes to Empire and 96 p.c. to foreign countries. Of the paper 13 p.c. goes to Empire and 87 p.c. to foreign countries. About half of the paper consumed in the United States is either of Canadian manufacture or is made from wood or wood-pulp imported from Canada.

### Subsection 3.—The Lumber Industry.

The manufacture of lumber, lath, shingles and other products of the sawmill is the second most important industry in Canada depending on the forest for its raw materials. Annual statistics covering this and other forest industries were collected and published by the Forest Service of the Department of the Interior from 1908 to 1916, since when the work has been carried on by the Dominion Bureau of Statistics, in co-operation with the Forest Service.

The production of sawn lumber in Canada in 1920 reached a total of over four billion feet board measure, the highest cut recorded since 1912. Owing to the subsequent depression the production of lumber in 1921 decreased by over a third and the average value by over \$10 a thousand feet. This was followed, with one exception, by annual increases up to 1929 and then by annual decreases down to 1932. There was an increase in 1933. British Columbia now produces over half the total. Table 13 gives the production of lumber, lath and shingles in each year from 1920 to 1933; comparable figures for 1908 to 1919 inclusive are given at p. 300 of the 1931 Year Book.

### 13.—Quantities and Values of Lumber, Lath, and Shingles Produced in Canada, calendar years 1920-33.

<sup>1</sup>Revised since the publication of the 1933 Year Book.

The total number of sawmills, tie, shingle, lath, veneer, stave, heading and hoop mills, and mills for cutting-up and barking or rossing of pulpwood reporting in 1933 was 3,517, as compared with 3,593 in 1932. The capital invested in these mills in 1933 was \$74,304,090, employment amounted to 17,779 man-years and wages and salaries amounted to \$10,040,165. The logs, bolts and other raw materials of the industry were valued at \$22,870,710 and the gross value of production was \$39,438,057. The net production, or the value added by manufacture, in 1933 was \$16,567,347.

The production of sawn lumber increased in quantity from 1932 to 1933 by 5.3 p.c. Lath production decreased by 27.2 p.c., but shingle production increased by 7.6 p.c. Otherwise, increases were reported in the production of all but a few of the minor products. The total gross value of production increased from \$38,506,647 in 1932 to \$39,438,057 in 1933; for production by provinces for the two latest years see Table 14.

### 14.—Quantities and Values of Lumber, and Values of Other and All Sawmill Products Made in Canada, by Provinces, 1932 and 1933.

| <b>Totals....</b>  | <b>1,809,884</b>   | <b>1,957,989</b> | <b>26,881,924</b> | <b>27,708,908</b> | <b>11,624,723</b>       | <b>11,729,149</b> | <b>38,506,647</b> | <b>39,438,057</b> |

British Columbia came first in total production, contributing 57·9 p.c. of the total cut in lumber and 82 p.c. of the shingles in 1933. Quebec followed in second place, Ontario was third and New Brunswick fourth. Douglas fir was the most important kind of lumber sawn, being produced almost entirely in British Columbia. Spruce is sawn in every province and comes second, with hemlock, white pine and balsam fir next in order of importance. Cedar is the most important shingle wood sawn. The conifers usually form about 95 p.c. of the total cut of all kinds of wood in this industry, only 5 p.c. being deciduous-leaved trees or hardwoods.

**Lumber Exportation.**—The square-timber trade reached its maximum development in the '60's; thereafter it declined gradually and has now almost entirely disappeared. Simultaneously with its decline came the increased exportation of deals and other sawn lumber, first to Great Britain and later to the United States. Our trade with the latter country has been from the first largely confined to planks, boards and dimension stock. During the American Civil War our exports of forest products of all kinds to the United States for the first time exceeded those to Great Britain, but in late years this has become invariable. The total quantity of sawn lumber and square timber exported from Canada changed little from 1900 to 1929, averaging about two billion ft. b.m. per annum, but decreased considerably in 1930, 1931 and 1932. The exports in 1932 amounted to 790,789 M ft. b.m., valued at \$14,159,315, of which the United States took the greater part. Exports to Empire countries made up 42 p.c. of the total and those to foreign countries, 58 p.c. In 1934, however, exports to Empire countries had increased to 74 p.c. of the total. The exports of lumber and square timber increased in 1934 as compared with 1933, but the exports of shingles and lath decreased. (See Table 15.)

**15.—Exports of Planks, Boards and Square Timber, by Importing Countries, calendar years 1931-34.**

#### Subsection 4.—Summary of Primary Forest Production.

For the purpose of comparing primary industries such as agriculture, fishing, forestry and mining, forestry production is here understood to consist of the total value of the products of woods operations, together with the value added by manufacture in sawmills and pulp-mills, but not in paper-mills. Forestry production under this system of classification, amounted to \$133,401,946 in 1932 or about 13 p.c. of the total primary production for the Dominion, which was estimated at \$1,051,543,238. Forest production, therefore, stood in third place in this respect, being exceeded by agriculture with \$565,417,704 or 54 p.c. and mining, with \$191,228,225 or 18 p.c.

#### Subsection 5.—Other Forest Industries.

Sawmills and pulp-mills draw their raw material directly from the forest in the form of logs and pulpwood, and produce sawn lumber, other sawmill products and pulp and paper. There are also a number of important industries which use these products as raw material for further manufacture. Some of them produce commodities made almost entirely of wood, wood-pulp or paper, others manufacture articles in which wood is the most important component, and others produce articles in which wood is necessary but forms only a small proportion of the value. There are, in addition, a number of industries which use wood indirectly in the manufacture of articles which do not contain wood as a component part. The first class includes the manufacture of paper, sash, doors and other millwork and planing-mill products; boxes, baskets, cooperage and other containers; canoes, boats and small vessels; kitchen, bakers' and dairy woodenware; wooden pumps, piping, tanks and silos; spools, handles, dowels and turnery. The second class includes the manufacture of furniture, vehicles and vehicle supplies, coffins and caskets, etc., and the use of paper in printing and the manufacture of paper boxes, bags, stationery and paper goods. The third class, where wood has a secondary importance, includes the manufacture of agricultural implements, railway rolling-stock, musical instruments, brooms and brushes, etc. The fourth class can be said to include practically every form of industrial activity, as few, if any, of these are entirely independent of the use of wood, directly or indirectly.

#### Subsection 6.—Manufactures of Wood and Paper.

A classification based on the chief component material in the products of each manufacturing establishment is now largely used in comparing manufacturing industries and for external trade purposes. Under this system most of the forest industries fall in the wood and paper group. In 1933 the gross value of production for all classes of manufactured products amounted to \$2,086,847,847, of which total the wood and paper group contributed \$342,155,077 or over 16 p.c. It was only exceeded in this respect by the vegetable products with over 20 p.c. Of the ten groups of the industrial census the wood and paper group, which includes the manufacture of lumber, pulp and paper as well as the wood- and paper-using industries, was highest in number of establishments with 7,917, in net value of products, with \$207,175,377 and in salary and wage distribution with \$102,500,377.

In few industries did manufacture add, in 1933, a higher percentage to the raw material used than in the wood- and paper-using industries; in the manufacture of pulp and paper this percentage is 159 and in the lumber industry, 66. By the manufacture of lumber into planing-mill products its value is increased by 92 p.c.

For the wood and paper group as a whole the net value of production, or the value added by manufacture, in 1933 was \$207,175,377, or 153 p.c. of the value of raw materials used. Further details are given in the Manufactures chapter of the present volume.

The forests of Canada contribute an important part to her export trade. During the fiscal year ended Mar. 31, 1934, exports of forest origin amounted to \$143,142,398 and made up 25 p.c. of the total value of exports for the period, amounting to \$579,343,145. Exports of forest origin were exceeded only by those of farm origin, which made up 35 p.c. of the total and were followed by products of mineral origin with 21 p.c. Forest products are also prominent among the individual items of exportation. Newsprint paper is second only to wheat on the list, with wood-pulp fourth and sawn lumber fifth. The gross contribution of the forest toward a favourable trade balance for Canada amounted to \$143,710,162 during the same period, exceeding all other groups in this respect.

### Subsection 7.—Forest Depletion and Increment.

**Fire Losses.**—No accurate summing up of forest fire losses in Canada's forests has ever been made, but it has been estimated that 60 p.c. of the original forest has been burned, 13 p.c. has been cut for use and 27 p.c. remains. Though the loss of merchantable timber has been greatly reduced in recent years by forest protective services and the education of the public, it still constitutes a serious drain on our resources. At a low estimate fire destroys annually about 230,000,000 cubic feet of merchantable timber and the young growth on 550,000 acres.

Since the historic Miramichi fire, which burned along the valley of the Miramichi river in New Brunswick in 1825, there have been a number of disastrous fires. About the year 1845 vast areas, west of lake Superior, were burned over. Some years later a very extensive fire burned along the height of land from lake Timiskaming to Michipicoten. In 1871 a fierce fire swept over more than 2,000 square miles of forest from lake Nipissing westward along the north shore of Georgian bay. About the same time the greater part of the Saguenay and Lake St. John district, in Quebec, was swept by one of the most destructive fires on record. Two other fires in 1891 and 1896 devastated more than 2,000 square miles of country in the southern Algoma district; in Quebec, the country along the line of the Quebec and Lake St. John Railway also suffered by a number of disastrous forest fires about this time.

During more recent times a series of disastrous fires swept over northern Ontario. A number of isolated fires around the mining camp of Porcupine culminated, on July 11, 1911, in a conflagration which resulted in the loss of 72 lives and property damage estimated at \$3,000,000. In 1916 fires in the same general region were responsible for the deaths of at least 224 people. In 1922 a third fire destroyed the town of Haileybury and other centres. In 1908 a fire originating in the forest around Fernie, B.C., destroyed that city. Every year thousands of acres are devastated by fires of less individual importance, which in the aggregate are rapidly depleting our forest resources. In 1923 there were unusually disastrous fires, chiefly in Eastern Canada. A total area of over 6,000,000 acres was burned over with a loss of approximately \$46,000,000.

Speaking generally, there are annually two periods in Canada when the forest fire hazard is highest—in the spring, after the disappearance of the snow, when the forest floor is dry and the green underbrush has not yet developed, and again in the fall when the herbaceous growth is dead and the ground covered with dry leaves.

Statistics compiled by the Dominion Forest Service from reports received from the various provincial and private forest protective organizations, show that during the ten-year period, from 1922 to 1931, 86.5 p.c. of all fires reported were due to human agencies and were therefore preventable. The remainder were attributed to lightning. Campers, settlers and railways are responsible for most of the fires whose origin is determined. Other causes, including lumbering operations, lightning and incendiarism, account for smaller proportions.

**Losses through Insects and Fungi.**—From 1912 to 1923 the spruce bud-worm caused tremendous damage to the spruce and balsam fir forests in Eastern Canada. In Quebec it was estimated that 100 million cords of pulpwood were destroyed by this insect, and in New Brunswick the loss was placed at 15 million cords. In this region the active stage of the infestation is now practically over, but the insect is causing damage in northern Ontario and Cape Breton island. Other insects, though not as destructive as this one, entail a heavy drain on the forest. The hemlock looper and a new species closely related to the spruce bud-worm are causing considerable damage in eastern coniferous forests. During the last few years dusting by aeroplane has been developed on a practical basis by the Entomological Branch of the Department of Agriculture and promises to be effective in the control of defoliating insects. Perhaps the most effective means of controlling destructive forest insects is by the introduction of parasites. The Entomological Branch of the Dominion Department of Agriculture has developed this means of attack with marked success in the case of the larch saw fly and has recently secured from Europe some millions of parasitic insects which are being liberated in the forests infested with the spruce saw fly. The loss caused by the various forms of rot and other fungous diseases is probably not less than that caused by insects under normal conditions. The butt rot is especially prevalent in balsam fir, and the value of the hardwoods is also greatly decreased by rot.

**Summary of Losses and Increment.**—The annual consumption of standing timber for use amounts to about 2,970,000,000 cubic feet. During the last few years fire has destroyed annually about 230,000,000 cubic feet of merchantable timber and the young growth of various ages on 550,000 acres. The destruction occasioned by insects, fungi and windfall is not known, but is estimated at 700,000,000 cubic feet per annum. It may be safely estimated that the forests of Canada are being depleted at the rate of upwards of 3,900,000,000 cubic feet per annum. With about 600,000 square miles of accessible timber in a growing condition, an average annual increment of 10 to 11 cubic feet per acre would be quite possible under forest management and would cover this depletion. In view of the destruction of young growth which occurs and the deterioration of the forests and the soil, caused by repeated fires, there is little hope that this increment is being produced at the present time throughout Canada, although particular areas are producing greatly in excess of this quantity. Extensive reproduction and rate of growth surveys being conducted by the Dominion Forest Service indicate that the increment is greater than previously estimated.

## CHAPTER X.—THE FUR TRADE.\*

**Historical Sketch.**—The place which the fur trade held during the French *régime* in Canada, when for a century and a half it was at once the mainspring of discovery and development and the curse of settled industry, is familiar history. Later, the Hudson's Bay Company may be said with truth to have held the West until the Dominion had grown to absorb it, bequeathing to the civilization which followed a native race accustomed to the white man and an example of organization and discipline that was of lasting value. The salient facts in the story are given in the following paragraphs.

From the earliest times the Basque and Breton fishermen from the "Banks" had traded for furs. As the French court demanded more and more furs, adventurers came for the fur trade exclusively. Pont-Gravé and Chauvin built Tadoussac in 1599 as a centre for this trade with the Indians of the Saguenay and, when trade routes were discovered farther inland, the founding of Quebec and Montreal followed. The French Government from the first granted monopolies of the fur trade, always on the condition that the company should bring to Canada a stated number of settlers. But settlement and the fur trade could never go together—settlement, by driving fur-bearing animals farther afield, made trade increasingly expensive, and the great profits of the fur trade, together with its freedom and romance, took the more adventurous from the rational pursuits of settlers. Trade spread west and south by the river routes, convoys bringing the furs yearly to Montreal and Quebec. The de Caen Company, in the seventeenth century, sent yearly to France from 15,000 to 20,000 pelts. "Beaver" was made the Canadian currency.

In the meantime, English navigators had been seeking a Northwest Passage to the Orient. By 1632 their efforts came to an end with little practical result. Hudson bay, however, had been accurately charted, so that when the first English fur-trading ships came some 30 years later, they sailed by charted routes to a safe harbour. The first expedition came at the instigation of Radisson and Grosseilliers, two French *coueurs des bois* who had travelled in the rich fur country north of lake Superior. They had sought aid in France but, being repulsed, turned to England. The charter of the "Adventurers of England trading into Hudson's Bay" was obtained in 1670 by Prince Rupert, uncle of Charles II, who became first Governor of the company (whence the name Rupert's Land). During the struggle with the French, beginning about 1685, no dividends were paid but with the English victory the company resumed payments. Forts were built on Hudson bay and James bay at the mouths of rivers; the company, as monopolist, waited for the furs to be brought to its posts.

With the Seven Years' War, the fur trade from the south passed out of the hands of the French and, until 1771, the English were busy rediscovering the old French routes to the West. A period of open competition followed. The discoverer of a new fur district was soon followed by competitors who undersold him and were undersold by him until some or all were ruined and left for new fields. The Northwest Company, founded in 1783-4, was a result of such competition. No capital was deposited, but each party supplied a proportion of the articles needed for trade. The Northwest Company pursued a vigorous policy, founding posts to control all the best fur districts. The Hudson's Bay Company felt the keenness of the competition, and was forced to abandon its ancient policy of waiting for furs to be brought to the bay. By 1816 the rivals had absorbed or ruined eleven other partnerships and were themselves on the verge of ruin. Finally, in

\*Revised by Miss F. A. Brown, Chief of the Fur Statistics Branch, Dominion Bureau of Statistics. This Branch publishes a detailed Annual Report on the Production of Raw Furs (Wild Life), obtainable from the Dominion Statistician.

1821, the two were joined under the name of the older company. The Northwest Company brought with it the control of the Pacific and Arctic watersheds, to be added to the lands draining into Hudson bay, and over the whole region the Hudson's Bay Company secured legal recognition of its monopoly of the fur trade. There followed 40 years of great prosperity. The company's rights of exclusive trading in Indian territory expired in 1859 and, ten years later, it surrendered its other privileges. In return, Canada granted £300,000 to the company, as well as lands about its trading posts, and one-twentieth of the land in the fertile belt between the North Saskatchewan river and the International Boundary. The Hudson's Bay Company thereupon became a trading company, with no extraordinary privileges.

**The Modern Industry.**—Great changes have taken place in the fur trade since the early days, but competition has increased and new territory is as eagerly sought as in the days prior to 1821. The railway has revolutionized conditions wherever its influence reaches. Vessels now ply the larger lakes and rivers and the aeroplane is frequently used for the transportation of furs from the more inaccessible districts. Increase in trapping and improved methods of capture, together with the advance of lumbering, mining and agricultural settlement, have driven fur-bearing animals farther and farther afield, and to conserve the fur resources of the country the provinces have found it necessary to enact laws to regulate the capture of fur-bearing animals and to provide for closed seasons during certain periods of each year. The fur trade has assisted in meeting the demand for furs by popularizing common and previously despised furs and by encouraging the use of the furs of domestic animals. Fur farming is playing an increasingly important part in the fur trade of Canada, the value of pelts of ranch-bred animals now representing about 30 p.c. of the total annual value of the raw fur production of the Dominion. The fox has proved the best suited for domestication, although other kinds of furbearers are being successfully raised in captivity—mink, raccoon, skunk, marten, fisher, and fitch. The successful breeding of the fox on fur farms came in the period of rising prices after 1890 and the introduction of woven wire fencing. About the middle of the last century Persian lamb, astrachan and broadtail, the product of the Karakul sheep, a native of Bokhara, Central Asia, came into general use. A few of these sheep were imported into Canada some years ago, but the industry as a source of supply for pelts has not shown progress in this country. Experiments in the breeding of rabbits for their fur have resulted in the production of several valuable kinds, chief among which are the Chinchilla rabbit, whose fur resembles that of the Bolivian Chinchilla, and the castorrex, named on account of the likeness of its fur to that of the beaver (*castor canadensis Kuhl*). The fitch, a native of Germany, was introduced into Canada in 1929, and fitch farming has since made rapid strides. In 1933 the number of fitch farms was 43.

The important markets for Canadian furs are London and New York. At the close of the Great War, Montreal took a position as an international fur market, holding the first Canadian fur auction sale in 1920 when 949,565 pelts, valued at \$5,057,114, were sold. The most recent figures show that at the auction sales held in Montreal during 1933, there were 2,394,764 pelts disposed of, with a total value of \$3,461,530, lower prices rather than the kind or quality of the pelts accounting for the decrease in total value. Sales are also held at Winnipeg and Edmonton. An important industry in Canada in connection with the fur trade is that of the dressing and dyeing of furs. In 1933 the number of fur skins treated in Canadian plants was 7,320,741 and the amount received for the work, \$1,449,232. The plants in operation numbered 13.

**Exports.**—Though the bison is gone forever and the beaver and the marten are slowly following, the fur trade of Canada is in no immediate danger of extinction. A century ago the value of the export trade in furs exceeded that of any other product. This has been greatly changed, yet the total output has not declined and Canada may be described as one of the great fur preserves of the world. In 1667 exports of furs to France and the West Indies were valued at 550,000 francs. In 1850, the first year for which trade tables of the Province of Canada are available, the value of raw furs exported was £19,395 (\$93,872); for the twelve months ended June 30, 1920, the value was \$20,417,329; for 1925, \$17,131,172; for 1930, \$17,187,399 and for 1932, \$11,495,086. Raw furs to the value of \$11,180,052 were exported during the twelve months ended June 30, 1933, the British market taking \$7,122,874 worth and the United States most of the rest. The area which will continue to furnish the historic peltries when settlement has planted its furthest outpost will still have to be reckoned by the hundreds of thousands of square miles. It is the function of the fur trade to turn this vast domain to perpetual economic use.

For a review of the fur-farming industry of Canada, see Chapter VIII, pp. 275 to 278.

**Conservation.**—The conservation of the wild life of Canada has been made a special object of government policy through the organization, in 1916, of the Advisory Board on Wild Life Protection, to co-ordinate the efforts of various departments and branches of the Dominion Government in matters relating to the conservation of the wild-life resources of Canada. The Northwest Game Act and the Migratory Birds Convention Act are the most important subjects to which the attention of the Board is specially directed and upon which it makes recommendations. In addition, the Board investigates and studies all problems relating to the protection and better utilization of all fur-bearing animals, "big game" mammals and to bird life, whether game birds, insectivorous birds or others. The Board

serves entirely without remuneration and during the whole period of its existence has incurred no expenditure.

In all provinces and territories of the Dominion, regulations governing the taking of fur-bearing animals are in force, and most kinds are protected during certain seasons of the year. In cases where special protection is necessary to avoid extermination of the species, the killing of the animals is prohibited over a period of years. Licences are required for trapping and trading, and direct revenue is derived by the provinces and territories from raw furs. The activities of the Dominion as a whole, with respect to wild life, are co-ordinated through biennial conferences of provincial and Dominion game protection officials. These conferences are called by the Department of the Interior and have assisted in evolving efficient plans for the preservation of Canada's wild-life resources.

**Fur Production Statistics.**—Statistics of the number and value of raw furs and skins taken were collected at the Decennial Census of 1881 and thereafter till 1911, the figures showing a value of \$987,555 taken in 1880, \$768,983 in 1890, \$899,645 in 1900 and \$1,927,550 in 1910. In 1920 the Dominion Bureau of Statistics commenced the annual collection of returns from fur traders, but arrangements were subsequently made with the provinces whereby the provincial game departments undertook to supply annually to the Bureau statements of the number and value of pelts taken in the respective provinces, the information being based on royalties, export taxes, etc. The figures of pelts taken and their values are given for the available years in Table 1. The high value shown for 1920 is due to the inflated prices of that time.

**1.—Summary of the Numbers and Values of Pelts of Fur-Bearing Animals Taken in Canada, years ended June 30, 1920-33.**

| Year ended June 30. | Pelts.    | Value of Pelts.         | Year ended June 30. | Pelts.    | Value of Pelts. |
|---------------------|-----------|-------------------------|---------------------|-----------|-----------------|
|                     | No.       | \$                      |                     | No.       | \$              |
| 1920.....           | 3,600,004 | 21,387,005 <sup>1</sup> | 1927.....           | 4,289,233 | 18,864,126      |
| 1921.....           | 2,936,407 | 10,151,594              | 1928.....           | 3,601,153 | 18,758,177      |
| 1922.....           | 4,366,790 | 17,438,867              | 1929.....           | 5,150,328 | 18,745,473      |
| 1923.....           | 4,963,996 | 16,761,567              | 1930.....           | 3,798,444 | 12,158,376      |
| 1924.....           | 4,207,593 | 15,643,817              | 1931.....           | 4,060,356 | 11,803,217      |
| 1925.....           | 3,820,326 | 15,441,564              | 1932.....           | 4,449,289 | 10,189,481      |
| 1926.....           | 3,686,148 | 15,072,244              | 1933.....           | 4,503,558 | 10,350,154      |

<sup>1</sup> Fur prices in this year were abnormally high. Any comparison of this figure with those of later years should take this into account.

Details by provinces of the numbers of pelts taken in the two latest years are given in Table 2.

**2.—Numbers and Values of Pelts of Fur-Bearing Animals Taken in Canada, years ended June 30, 1932 and 1933.**

| Province or Territory.     | Numbers of Pelts. |                  | Values of Pelts.  |                   |

| <b>Totals.....</b>         | <b>4,449,289</b>  | <b>4,503,558</b> | <b>10,189,481</b> | <b>10,305,154</b> |

Among the provinces, Ontario occupies first place in value of raw fur production, its output in 1932-33 being valued at \$2,167,407. Quebec is second with \$1,558,458, and Saskatchewan third with \$1,201,038. The relation of the value of raw fur production in each province to the total for Canada in 1932-33 is shown by the following percentages: Ontario, 21·0; Quebec, 15·1; Saskatchewan, 11·7; Northwest Territories, 10·6; Alberta, 10·4; Manitoba, 8·3; British Columbia, 6·5; New Brunswick, 5·8; Nova Scotia, 4·7; Prince Edward Island, 4·5; and Yukon 1·4.

In order of value, silver fox is far ahead of any one of the other kinds, with a total in the season 1932-33 of \$3,135,885. Next in importance is the muskrat, with a total value of \$1,581,606, and following closely is mink, with \$1,438,375. None of the other kinds come to the million dollar mark. Beaver occupied in the season under review only fourth place, the value of output amounting to \$698,660. Otter, mentioned prominently along with beaver in the records of the early trade, had in the season 1932-33 a take of only 8,885 skins, valued at \$138,348. The value of the different kinds of fox, combined, for the season 1932-33 was \$4,891,563, or 47 p.c. of the entire output of Canadian furs in the season. Practically all of the silver fox pelts are from fur farms, and large proportions of the blue, patch or cross, and red fox pelts are likewise from the farms. White fox, on the other hand, is a product of the wilds, most of the pelts being taken in the Northwest Territories, and the northern parts of Quebec and Manitoba.

The following table gives details of raw fur production by kinds for 1932 and 1933.

**3.—Kinds, Numbers, Total Values and Average Values of Pelts of Fur-Bearing Animals Taken in Canada, years ended June 30, 1932 and 1933.**

| Kind.                       | Numbers of Pelts.            |                  | Total Values of Pelts.        |                   | Average Values per Pelt. |          |

## CHAPTER XI.—THE FISHERIES.\*

### Section 1.—The Early Fisheries.

Fishing is one of the earliest and most historic industries of Canada. From a date which precedes authentic record, the Normans, the Bretons and the Basques were on the cod banks of Newfoundland. Cabot, in 1497, when he first sighted the mainland of North America, gave it the name of "Bacalaos", the Basque word for cod fish which he found already in use among those hardy seamen. Cape Breton, one of the oldest place-names in America, is another memorial of the early French fishermen—and the Spaniards and the Portuguese were but little behind. Fernandez de Navarrete mentions all three as frequenters of the Grand Banks before 1502. The fishing was by hand lines over barrels made fast to the bulwarks to prevent fouling, the vessels remaining during fine weather then returning to France with from 30,000 to 50,000 cod. Voyages along the coast soon showed the cod as plentiful inshore as on the outer banks, and it became common for a crew to anchor in a bay, erect a hut on shore, and make daily excursions to the fishing grounds. The product was salted and dried on land and at the end of the season shipped to France. In 1534 Jacques Cartier found traces, in the gulf of St. Lawrence, of these early "Captains Courageous" and their rivalries in arms and in the capture of the teeming product which had tempted them so far from home. An establishment of the kind just mentioned was founded at Tadoussac by Chauvin in 1599. Soon the fishermen began to stay all winter and thus to erect permanent fishing settlements. Fishing, therefore, may well be regarded as the first industry to be systematically prosecuted by Europeans in what is to-day the Canadian domain. It has never since ceased to yield a perennial harvest to both Europe and America.

By the Treaty of Utrecht in 1713, Britain became the owner of Newfoundland and excluded the French from fishing and drying fish on certain sections of the coast, but France retained rights of fishing and of drying fish on other sections of the Newfoundland coast together with the fisheries of Cape Breton and the Gulf. These French rights resulted in the French Shore question which remained unsettled for nearly two centuries. The Seven Years' War (1756-63) put a stop to continuous fishing. At its close the Robin family of Jersey came to Canada and gradually acquired the former French fishing stations. Until the arrival of the Loyalists all other fishing but cod was neglected. Inshore fisheries alone (including those of the Labrador coast) were developed during this phase; no deep-sea fishing vessel put out from Lunenburg, now the chief centre of the deep-sea fishery, until 1873.

### Section 2.—The Canadian Fishing Grounds.

The fishing grounds of the Dominion of Canada are perhaps the most extensive in the world. On the Atlantic, from Grand Manan to Labrador, the coast line, not including the lesser bays and indentations, measures over 5,000 miles. The bay of Fundy, 8,000 square miles in extent, the gulf of St. Lawrence, fully ten times that size, and other ocean waters comprise not less than 200,000 square miles, or over four-fifths of the area of the fishing grounds of the North Atlantic.

\*Revised by Miss F. A. Brown, Chief, Fisheries Statistics Branch, Dominion Bureau of Statistics. This Branch publishes an Annual Report on the Fisheries Statistics of Canada, together with advance summaries on Fish Caught, Marketed and Prepared, by provinces. These may be obtained from the Dominion Statistician.

In addition there are on the Atlantic seaboard 15,000 square miles of inshore waters controlled entirely by the Dominion. Large as are these areas, they represent only a part of the fishing grounds of Canada. The Pacific coast of the Dominion measures 7,180 miles in length and is exceptionally well sheltered. Throughout the interior is a series of lakes which together contain more than half of the fresh water on the globe—Canada's share of the Great Lakes alone amounts to over 34,000 square miles, a total which, of course, does not include lake Winnipeg (9,457 square miles), lake Manitoba and others of even greater area.

Still more important than the extent of the Canadian fishing grounds is the quality of their product. It is an axiom among authorities that food fishes improve in proportion to the purity and coldness of the waters from which they are taken. Judged by this standard, the Canadian cod, halibut, herring, mackerel, whitefish and salmon are the peers of any in the world. It is possible, therefore, to state that by far the most valuable fisheries of the western hemisphere, if not of the globe, belong to Canada.

It will be seen from the above that it is impossible to deal adequately with the Canadian fisheries in the aggregate; they are those of a continent rather than of a country, and are of corresponding diversity. Omitting the enormous Hudson Bay and peri-Arctic region, which extends from Ungava to Alaska and the fish resources of which are not known, the Canadian fisheries may be divided into Atlantic, inland and Pacific fisheries.

A detailed description of these respective fishing grounds of Canada, of the fish caught on these grounds, and of the methods of fishing, will be found at pp. 222-225 of the 1932 Year Book.

Lobstering is another distinctive industry. In 1870, there were three lobster canneries on the Atlantic coast of Canada; in 1933 the canneries numbered 329 and gave work to 6,000 people: 30,000,000 lobsters is a normal catch. The difficulty of enforcing regulations as to the capture of undersized and spawning lobsters offers a constant problem in connection with the output, but with the co-operation of the fishermen there is hope that the fishery may be maintained and the annual harvest show no decline. In New Brunswick the canning of "sardines" (locally young herring and not a distinct type of fish) is second only to lobstering. Oysters, once plentiful everywhere, are now found in diminished quantities, but the Government is working towards the restoration of the industry through the development of oyster farming; favourable areas in Prince Edward Island waters have been seeded and the work in connection with oyster culture is being carried on under the direction of experts.

### Section 3.—The Government and the Fisheries.

Upon the organization of the Government at Confederation, the administration of the Canadian fisheries and marine was placed in the charge of a department of the Dominion Government, which then exercised complete jurisdiction over the fisheries under the supervision of a Minister, with a large staff of inspectors, overseers and guardians to enforce the fishery laws. Early in 1930 a change in departmental organization was effected, whereby two departments, each in charge of a Minister, were created to administer respectively the Marine and the Fisheries.

In 1882, 1898, 1913 and 1920, decisions in the courts considerably altered the status of jurisdiction as between the Dominion and the provinces. The Dominion now controls the tidal fisheries of the Maritime Provinces and British Columbia

and the fisheries of Yukon and the Northwest Territories and the Magdalen islands. The non-tidal fisheries of the Maritime Provinces, the Prairie Provinces and Ontario, and both the tidal and non-tidal fisheries of Quebec (except the fisheries of the Magdalen islands) are controlled by the respective provinces, but the right of fisheries legislation for all provinces rests with the Dominion Government. [See the Fisheries Act (R.S.C., 1927, c. 73).] The expenditure of the Dominion on the fisheries in the fiscal year 1933-34, including civil government salaries, contingencies, etc., was \$1,599,567, and the revenue \$132,581.

**Conservation.**—River and lake fisheries certainly, and sea fisheries probably, if left to themselves, conform to the economic law of diminishing returns. The Canadian Government, accordingly, has had for a main object the prevention of depletion, the enforcement of closed seasons, the forbidding of obstructions and pollutions and the regulation of nets, gear and fishing operations generally. In addition, an extensive system of fish culture has been organized; the Dominion, in 1933, operated 24 main hatcheries, 9 subsidiary hatcheries and 8 salmon-retaining ponds at a cost of \$205,682, and distributed 109,500,000 eggs, fry or older fish, mostly salmon and trout. The young fish are distributed gratis if the waters in which they are to be placed are suitable and are open to public fishing. Investigations and experiments directed toward the culture of the oyster have been carried on since 1929 at Malpeque bay, P.E.I., by the Dominion Department of Fisheries.

**Direct Assistance.**—Since 1927 fish collection services have been operated on several stretches of the Atlantic coast by the Department of Fisheries. Fishermen in the waters covered by the fish-collection boats are thus enabled to sell their catches promptly and have them delivered to purchasers at central points at small cost. They are also able to spend their time in catching fish instead of in preparing their catches for the dried-and-cured-fish markets. Again, a system has been established of broadcasting radio reports as to weather probabilities, bait and ice supplies, ice conditions along the coast and prevailing prices. Further, under authority of the Fish Inspection Act (R.S.C., 1927, c. 72), systems of instruction in improved methods of fish-curing and barrel-making have been in operation for several years.

**Scientific Research.**—Stations under the direction of the Biological Board of Canada for the conduct of biological research into the numerous complex problems furnished by the fisheries are established at Halifax, N.S., St. Andrews, N.B., and Nanaimo and Prince Rupert, B.C. The biological stations at St. Andrews and Nanaimo are concerned chiefly with problems of fish life, while at the fisheries experimental stations at Halifax and Prince Rupert, attention is devoted to the practical problems of the fishing industry. A marine biological station, chiefly for oyster investigation work, is conducted at Ellerslie, P.E.I., and a sub-station for salmon investigations at Cultus Lake, B.C. The Biological Board employs a permanent staff of scientists, and in addition, Toronto, McGill, Queen's, Manitoba, British Columbia and the chief Maritime Provinces' universities send workers to the several stations, chiefly professors and trained scientists. The life-histories of edible fishes, the bacteriology of fresh and cured fish, improved methods of handling and preparing fish, and numerous other practical problems have been taken up and scientific memoirs and reports issued.

**International Problems.**—The chief international fisheries problem is the question of the rights of the United States, whose fishermen were granted, by the Treaty of Versailles, 1783, certain privileges in the Canadian inshore fisheries. Losing these by the War of 1812, the United States, after 1818, surrendered all but

their right to call at Canadian ports for shelter, wood, water, or to make repairs, and to fish around the Magdalen islands and on the north shore of the gulf of St. Lawrence from Point Joli eastward, and to dry and cure their fish in any of the unsettled bays on this portion of the North Shore.

Questions of interpretations to be placed on certain parts of the Treaty of 1818 were set at rest for the years 1854-66 by the Reciprocity Treaty. This treaty provided for the free admission into either country of the fish products of the other, and fishermen of each country were allowed to fish in the Atlantic territorial waters of the other, with the exception of specified rivers and other grounds.

In 1871, the Treaty of Washington revived the fishery provisions of the Reciprocity Treaty of 1854, and provided for a commission to determine the compensation to be paid by the United States as the difference in the value of the concessions mutually granted. This commission sat at Halifax in 1877, handing down the "Halifax Award", the amount of which was \$5,500,000. In 1885, however, the United States terminated the fisheries articles of this treaty and a period of disagreement followed. A settlement was negotiated in 1888, when the plenipotentiaries of the two nations agreed to the "Unratified Treaty of 1888", which provided that United States' fishing vessels were to be granted, without fee, annual licences authorizing them to purchase provisions and outfits in Canadian ports, to tranship catches and to ship crews. Out of this treaty grew the so-called *modus vivendi* licences. Since it was recognized that the treaty could not receive official sanction before the commencement of the fishing season, it was agreed that United States' fishing vessels, on payment of \$1.50 per registered ton, should receive annual licences conveying the above privileges. The treaty was rejected by the United States' Senate but Canada continued to issue *modus vivendi* licences up to 1918, when arrangements were made for reciprocal privileges in the ports of either country. The arrangement was discontinued in the United States on July 1, 1921. In the following year the *modus vivendi* licences were revived in Canada but the system was terminated on Dec. 31, 1923, and for several years United States' fishing vessels were limited to the provisions of the Treaty of 1818. In 1933 the two countries made a further arrangement, and the *modus vivendi* licence plan under which United States' vessels are allowed to enter Canadian ports to buy bait or to obtain supplies of water, is again in operation.

On the Great Lakes also, the more important fishery problems, such as restocking and marketing, are necessarily international in character, and are complicated by the number of State governments interested. Much the same situation has developed in British Columbia, where the sockeye of the Fraser are taken by the canners of Puget sound in quantities that largely exceed the catch of the Canadian canners, and by trap nets and other methods forbidden in Canadian waters. In 1906 an international commission first discussed the question, while in 1922 the prohibition of sockeye fishing in the Fraser for five years, with a view to conservation, was recommended by a Parliamentary commission.

*The Halibut Fishery.*—The halibut fishery on this side of the Pacific is engaged in only from Canadian and United States' ports, but, owing to the fact that it is largely carried on beyond territorial waters, neither country alone can control it. At the same time it is in the interests of both countries that the fishery should be permanently maintained in a flourishing condition. The question of finding an adequate method of dealing with the matter was therefore referred to the Canadian-American Fisheries Conference that was appointed in 1918 by the Governments of

the two countries to consider the settlement of outstanding fishery questions between Canada and the United States. In 1922, Canada proposed that the halibut question should be considered by itself. This was agreed to, and resulted in the treaty signed Mar. 2, 1923, "For the Protection of the Pacific Halibut". Under this treaty a closed season in each year was provided for halibut fishing. A further convention, signed by the plenipotentiaries of both countries at Ottawa on May 9, 1930, and ratified by the Governments of the two countries on May 9, 1931, provided certain additional regulations in connection with the division of the waters into fishing areas, changing of dates for closed seasons, etc. This revised convention provides a simpler and more responsive system of control than was previously possible.\*

**Fishing Bounties.**—An important though indirect aftermath of the Washington Treaty remains. By an Act of 1882 (45 Vict., c. 18), for the development of the sea fisheries and the encouragement of boat-building, provision was made for the distribution, annually, among fishermen and the owners of fishing boats on the Atlantic waters of \$150,000 in bounties, representing the interest on the amount of the Halifax Award. An Act of 1891 (54-55 Vict., c. 42) increased the amount to \$160,000, the details of the expenditure to be settled each year by Order in Council. For the year 1933, payment was made under authority of the Deep Sea Fisheries Act (R.S.C., 1927, c. 74) on the following basis: to owners of vessels entitled to receive bounty, \$1 per registered ton, payment to the owner of any one vessel not to exceed \$80; to vessel fishermen entitled to receive bounty, \$6.10 each; to owners of boats measuring not less than 12 feet keel, \$1 per boat; to boat fishermen entitled to receive bounty, \$5.20 each. The claims paid numbered 12,836, compared with 12,292 paid in the previous year. The total amount paid in 1933 was \$159,311. Details of the distribution of bounties for the years 1930 to 1933 are as follows:—

**1.—Government Bounties Paid to Fishermen for the calendar years 1930-33.**

| Province.                 | Numbers of Men who Received Bounties. |               |               |               | Amounts of Bounties Paid. |                |                |                |

**Fisheries Statistics.**—The fisheries statistics of Canada are issued under an arrangement for statistical co-operation between the Dominion Bureau of Statistics, the Dominion Department of Fisheries and those branches of the different Provincial Governments having jurisdiction with regard to fisheries. The Department of Fisheries of the Dominion Government exercises jurisdiction over the fisheries of the Maritime Provinces, the Northwest Territories, Yukon and British Columbia; and the Fisheries Branches of Ontario, Quebec, Manitoba, Saskatchewan and

\*For a pamphlet containing the text of this revised convention application should be made to the Department of Fisheries, Ottawa.

Alberta have jurisdiction over the fisheries of their respective provinces, excepting that in the case of Quebec the fisheries of the Magdalen islands are under the jurisdiction of the Dominion authorities. The province of British Columbia has a Fisheries Branch, but it does not engage in independent statistical work. Under the arrangement above referred to, the statistics of the catch and of the products marketed in the fresh state or domestically prepared are collected by the local fishery officers, checked in the Department of Fisheries and compiled in the Dominion Bureau of Statistics. In the case of manufactured fish products, schedules similar to those of other sections of the Census of Industry are sent by the Bureau to the operators of canneries, fish-curing establishments, etc., the fisheries officers assisting in securing expeditious and correct reports.

#### Section 4.—The Modern Fishing Industry.

The existing fishing industry of Canada is in the main the growth of the past half century. No comparable figures of production are available for years prior to the confederation of the provinces, but about 1836 the production of fish in what are now the three Maritime Provinces had an estimated value of something like \$1,500,000, while the production of Lower Canada was probably worth \$1,000,000. In 1870 the total was \$6,600,000 and this was more than doubled by 1878. In the '90's it passed \$20,000,000 and in 1912, \$34,000,000. The highest figure was reached in 1918, with over \$60,000,000, but this was in a period of greatly inflated prices. Between that year and 1921 the total value of the products of the fisheries decreased and in the latter year was back to \$34,000,000. From 1921 to 1926 a steady increase to \$56,000,000 took place and in the following three years the value fluctuated around the \$50,000,000 mark. The prevailing world-wide depression has affected the markets for fish products; the value dropped to \$30,517,306 in 1931 and to \$25,957,109 in 1932. In 1933 conditions were improved, and the value rose to \$27,558,053. These figures represent the total values of fish marketed, whether in a fresh, dried, canned, or otherwise prepared state.

The number of employees, which was 74,882 in 1931, rose to 78,208 in 1932 and to 79,548 in 1933, while the value of the capital investment of the industry, which was \$45,325,514 in 1931, fell to \$41,789,278 in 1932 and to \$40,912,857 in 1933.\*

Among individual fish products the cod and the salmon long disputed the primacy; if the record is taken back to early times, the cod is the most valuable fish; in the past 30 years, however, the salmon has definitely taken the lead, and the heavy pack and relatively high price of lobsters have, in recent years, sent cod down to third place. Halibut, for a number of years prior to 1931, occupied fourth place but has now dropped to fifth place, yielding fourth place to herring. These changes have, of course, affected the relative standing of the provinces, British Columbia now occupying the leading place that in earlier times belonged to Nova Scotia, and producing in recent years fish products to nearly half the total value. The yearly record of production since 1870, the total production by provinces for the past six years, and the record by values of principal fish products for the past five years in descending order of importance, are shown in Tables 2, 3 and 4. The aggregate value of production in 1933, \$27,558,053, shows an increase of 6 p.c. over the figure of \$25,957,109 in 1932.

\* For detailed historical statistics of the fisheries, see pp. 52-56 of Fisheries Statistics of Canada, 1933, obtainable from the Dominion Statistician.

**2.—Total Values of the Products of the Fisheries of Canada, 1870-1933.**

NOTE.—From 1870 to 1906 inclusive, years ended June 30; from 1908 to 1917 (a) inclusive, years ended Mar. 31; since and including 1917 (b), calendar years. No statistics are available for the nine-month period ended Mar. 31, 1907.

<sup>1</sup> Quantities caught.<sup>2</sup> Values marketed.

**Quantities and Values in Recent Years.** The wide variations in prices from year to year make total values misleading. On the other hand, the quantities of different kinds of fish are stated in many different units which make the total volume of production difficult to compare from year to year. An effort is made to overcome these difficulties in Tables 5 and 5A by working out what the values would be in a later year if prices had remained the same as in the preceding year. From 1931 to 1932 there was a decline of 15 p.c. in the total value of the fisheries. The decrease due to lower prices was 11.5 p.c., while that due to a smaller catch was 3.5 p.c. In 1933 there was some improvement and total value increased by 6.2 p.c. over 1932. The increase due to better prices was 4.3 p.c., while larger quantities caught accounted for an increase of 1.9 p.c. in total values. The improvement in 1933, although encouraging as the first change in a declining trend which had persisted since 1928, was not large, so that total values in 1933 were still lower than those of 1931 by 9.7 p.c.—7.9 p.c. due to lower prices and only 1.8 p.c. due to smaller catch. During the longer period from 1928 to 1933 total values have declined from \$55,051,000 to \$27,558,000 or by 50.0 p.c. The decline due to lower prices has been 28.8 p.c., while that due to a reduction in the catch has been 21.2 p.c.

**5.—Yields of the Fisheries of Canada, Compared as to Quantity and Value, for 1931 and 1932. ('000' omitted.)**

| Kind of Fish or Product.    | Actual Value, 1932. | Value at Prices of 1931. | Actual Value, 1931. | Increase (+) or Decrease (-) | Due to Higher (+) or Lower (-) Prices. | Due to Larger (+) or Smaller (-) Quantities. |
|-----------------------------|---------------------|--------------------------|---------------------|------------------------------|----------------------------------------|----------------------------------------------|
|                             | \$                  | \$                       | \$                  |                              |                                        | \$                                           |

**Operations in 1933: Detailed Record of Production.**—The total value of the products of the Canadian fishing industry in the calendar year 1933 was \$27,558,053, as compared with \$25,957,109 in 1932 and \$30,517,306 in 1931. In Tables 6 and 7 will be found statements for the whole of Canada of each fish and fish product marketed in 1933, with comparative figures for the preceding year—Table 6 dealing with sea fish and Table 7 with products of the inland fisheries. In Tables 8 and 9 the numbers of the fish-canning and -curing establishments are shown, together with the materials used and values of the products.

## 6.—Quantities and Values of Sea Fish and Products Marketed, calendar years 1932 and 1933.

**Capital and Employees.**—In 1933 capital investments in the fisheries were as follows: (a) in vessels, boats, nets, weirs, traps, wharves, ice-houses, etc., used in the primary operations of capturing the fish, \$25,380,082, of which \$21,093,282 was invested in the sea fisheries and \$4,286,800 in the inland fisheries; (b) in fish-canning and -curing establishments (land, buildings, machinery, supplies on hand, cash and operating accounts), \$15,532,775—grand total \$40,912,857. The number of employees engaged in the primary operations of fishing was 65,506 in 1933, and in canning and curing establishments, 14,042, a total of 79,548. The total salaries and wages bill in canneries and fish-curing establishments was \$3,024,068. Tables 10 and 11, herewith, show the items included in the above totals, with comparative figures for 1932, while Table 12 analyses the salaries, wages and earnings of the employees in canneries, etc.

**10.—Numbers and Capital Values of Fishing Vessels, Boats, Nets, Traps, etc., Used in the Fisheries of Canada, and of Establishments Processing the Products, 1932 and 1933.**

**Trade.**—For reasons already noted, the domestic consumption of fish is relatively small in Canada, and the trade depends largely upon foreign markets. From 60 to 70 p.c. of the annual catch is an average export. In the calendar year 1933 fishery products worth \$8,796,015 went to the United States and \$4,384,007 to the United Kingdom. The most important single export is canned salmon (to Great Britain and European markets), followed closely by canned lobster, while cod, dry-salted (to the West Indies, South America, etc.) is third in order of value. For fresh fish, especially whitefish and lobsters, the United States is the chief market. Canadian imports of fishery products in the calendar year 1933 amounted to \$1,694,325. A general review of the import and export trade in fish for 33 years past is given in Table 13, by fiscal years, while Table 14 gives a comparative record of exports, by countries, during the calendar years 1932 and 1933. Table 15 shows the leading items of export for the calendar years 1931-33. For a complete analysis of imports and exports, as well as of production, see the annual report "Fisheries Statistics", issued by the Dominion Bureau of Statistics.

### 13.—Values of Exports and Imports of Fish and Fish Products, fiscal years 1902-34.

**NOTE.**—In this table "Exports" include seal skins and fish oils, and "Imports" include turtles, whale-bone, shells and their products, seal skins, fish oils and ambergris, in addition to fishery products as shown in Tables 12 and 13 of Chapter XVI of External Trade, in this volume.

## CHAPTER XII.—MINES AND MINERALS.\*

An article on the geology of Canada, referring to the chief mineral-bearing areas of the Dominion, will be found at pp. 18-28 of the present edition of the Year Book. This is followed by an account of the chief discoveries and investigations of mineral-bearing ores in 1932 and 1933, at pp. 29-38; similar articles for earlier years were published in previous editions. These articles furnish references to more detailed sources of information in the publications of the Dominion and Provincial Governments and in the scientific journals.

The Mines and Minerals chapter of the Year Book is divided into six sections: (1) a sketch of the administration of mineral lands and mining laws, (2) a summary of general production, (3) the industrial statistics of the mining industries, (4) production of metallic minerals, (5) production of non-metallic minerals, (6) production of clay products and structural materials.

For more detailed information on the mineral production of Canada the reader is referred to the various reports issued by the Mining, Metallurgical and Chemical Branch of the Dominion Bureau of Statistics.

**Statistics of Mines and Minerals.**—The compilation and publication of statistics of the production of mines and minerals in the Dominion is carried out by the Mining, Metallurgical and Chemical Branch of the Dominion Bureau of Statistics, which works in close co-operation with the Mines Departments of the various Provincial Governments, collecting the data in collaboration with these Departments. Questionnaires sent out to the mining producers are designed to meet the requirements of both the Dominion and the provincial authorities, thus eliminating duplication of labour.

**Annual and Monthly Statistical Reports.**—Detailed statistics of the mineral production of the Dominion are published annually in a comprehensive Dominion-wide report, which includes detailed tables of production, capital invested in the mining industry, number of employees, salaries and wages, fuel and machinery used in mining, together with tables showing imports and exports of minerals and their products, and a résumé of general mining conditions. The latest of these reports available for distribution at the time of writing covers the calendar year 1933 and may be obtained from the Dominion Statistician on request.

A summarized report on mineral production, giving fairly detailed preliminary figures for the preceding calendar year, is issued about Mar. 15 of each year, and the salient points are reviewed at the Annual Meeting of the Canadian Institute of Mining and Metallurgy held in the first week of April. (The 1934 report is now available.) Further, a bulletin, issued each year at the beginning of January, gives the most accurate estimate then possible for the mineral production of the year just closed. In addition to the above, annual bulletins giving the detailed production of each mineral are issued as soon as the final figures become available in each case.

Monthly statistics of the physical production of 16 of the leading minerals of Canada have been compiled for the past six years and are published separately in monthly bulletins. These figures indicate the current trend of activity in mining operations.

\*Revised by W. H. Losee, B.Sc., Chief of the Mining, Metallurgical and Chemical Branch, Dominion Bureau of Statistics. A complete list of the publications of this Branch appears in Chapter XXIX, Section I, under "Production".

# CANADA MINERAL PRODUCTION

LEGEND  
● PRODUCING AREAS  
○ NON-PRODUCING AREAS

**Coal Statistics.**—Coal is perhaps the most important of all minerals, from the point of view of the general public. This special position is recognized in some measure by the publication of an annual report on coal statistics, giving complete details of coal-mining operations in the various coal-producing provinces and showing the imports and exports of coal by kinds and by ports of entry and exit, together with industrial statistics in relation to coal mining. Monthly bulletins and quarterly reports on coal and coke statistics are also issued, giving coal and coke production and imports and exports, the quarterly printed reports showing in detailed form production of coal by areas, and imports and exports by ports of entry and exit.

## Section 1.—Mineral Lands Administration and Mining Laws.

The mineral lands of Canada, like other Crown lands, are administered by either the Dominion or the Provincial Governments. The Dominion Government administers the mineral lands of Yukon and the Northwest Territories as well as those in all Indian Reserves, and in National Parks in the Prairie Provinces and British Columbia. Since the transfer of the natural resources to the Prairie Provinces in 1930, all other mineral lands lying within the boundaries of the several provinces have been administered by the respective Provincial Governments.

### Subsection 1.—Dominion Mining Laws and Regulations.\*

Dominion lands to which these regulations apply are those administered by the Department of the Interior, and lie within Yukon and the Northwest Territories. Titles issued for Dominion lands, the property of the Dominion Government, in the territories of Canada, reserve to the Crown the mines and minerals which may be found on or under such lands, together with the right of operation.

**Placer.**—Claims 500 feet long and from 1,000 to 2,000 feet wide, according to location, may be staked out and acquired by any person 18 years of age or over. Claims to be marked by two legal posts, one at each end, and the line joining them marked. Creek claims are staked along the base line of the creek, and extend 1,000 feet on each side. River claims are 500 feet on one side of the river and extend back 1,000 feet. Other claims are staked parallel to the creek or river on which they front, 500 feet long by 1,000 feet. Expenditure in development of each claim to be incurred and proved each year, \$200 in Yukon and \$100 elsewhere. Royalty  $2\frac{1}{2}$  p.c. under Yukon Placer Mining Act.

**Quartz.**—"Mineral" under this heading means all deposits of metals and other useful minerals other than placer deposits, peat, coal, petroleum, natural gas, bitumen and oil shales.

Under the newer regulations, effective Apr. 2, 1932, applicable to the Northwest Territories, any prospector or locator of a mineral claim, whether an individual, mining partnership or a company, must hold a miner's licence, the fee being \$5 for an individual, from \$5 to \$20 for mining partnerships, and larger amounts proportionate to their capitalization for mining companies. A licensee may stake out 6 claims on his own licence and 12 more for two other licensees, not exceeding 18 in all in any one licence year in any mining division. A mineral claim shall be rectangular and marked by a post at each corner—maximum area 51.65 acres, being 1,500 feet

\*For copies of any of the regulations referred to, application may be made to the Lands, Northwest Territories and Yukon Branch, Department of the Interior, Ottawa.

square. Entry is granted by a mining recorder, fee \$5 for a claim located by a licensee on his own licence, and \$10 if located on behalf of another licensee. Grant is renewable from year to year, subject to representation work to the value of \$100 being done on the location each year. A maximum of 36 claims may be grouped for purposes of representation work. When prescribed representation work to the value of \$500 has been done and confirmed, discovery of mineral in place shown to have been made, a survey made by a Dominion land surveyor at grantee's expense and certain other requirements met, a lease is issued for a term of 21 years, renewable, the rental for the full term of a claim not exceeding 51.65 acres being \$50. The cost of the survey, reckoned as \$100, may be counted as work done on the claim. When the profits of a mine exceed \$10,000 in any calendar year, there is a royalty of from 3 to 6 p.c. or higher, proportionate to profits. Miners' licences are not required in Yukon under the Yukon Quartz Mining Act, but the general provisions of the Act are similar to those of the Quartz Mining Regulations above, except that the fee for a grant is \$10 and only 8 mineral claims can be grouped for operation.

In addition to these Quartz and Placer Mining Regulations, applicable to the Northwest Territories, and the Yukon Quartz and Placer Mining Acts, the following regulations regarding minerals are in force: *Yukon*.—Dredging Regulations; Petroleum and Natural Gas Regulations. *Yukon and Northwest Territories*.—Alkali Mining Regulations; Carbon-Black Regulations; Coal Mining Regulations; Potash Regulations and Domestic Coal Permits. *Northwest Territories*.—Dredging Regulations; Oil and Gas Regulations; Quarrying Regulations and Permits to remove sand, stone and gravel from beds of rivers.

### Subsection 2.—Provincial Mining Laws and Regulations.

**Nova Scotia.**—All minerals in Nova Scotia, except limestone, gypsum and building materials, are the property of the Crown. They are dealt with under the provisions of the Mines Act (c. 22, R.S.N.S., 1923) and amending Acts of 1927 (c. 17), 1929 (c. 22) and 1933 (c. 12), and are administered by the Minister of Public Works and Mines, at whose office in the Parliament Buildings, Halifax, all records of mining titles are kept.

The chief mineral product of Nova Scotia is coal, which is subject to a royalty of 12½ cents per long ton. Coal used in mining operations, or for domestic purposes by workmen employed about the mine, is exempted from royalty. Other important minerals of Nova Scotia are gold, salt, lead, zinc, copper, diatomaceous earth, manganese, antimony, gypsum and limestone.

Licences to search for mineral, good for a year, are issued at a nominal fee. More permanent holding is obtained by lease, which, in the case of minerals other than gold and silver, is granted for 20 years (subject to payment of an annual rental and the performance of work), the lease carrying the right to three successive renewals of 20 years each. A lease for gold and silver is given for 40 years, subject to a small annual rental and performance of work.

Full information concerning minerals and mining laws may be obtained by writing the Department of Public Works and Mines at the above address.

**New Brunswick.**—In most grants of Crown land since about the year 1805, all mines and minerals are reserved to the Crown and regarded as property separate from the soil. Prior to that time, most of the grants reserved only gold, silver, copper, lead and coal. Royalties levied are 10 cents per long ton on coal and 5 p.c.

on the value at the well's mouth for petroleum and natural gas. Prospectors must obtain a licence costing \$10, good for the calendar year, entitling the prospector to stake up to 10 claims of 40 acres each. Claims must be registered within 30 days and 25 days' work done on each claim within the year, after which a mining licence, renewable annually on the payment of \$10 per claim, will be granted. Administration is carried on under the provisions of the Mining Act (c. 35, R.S.N.B., 1927). For full information apply to the Department of Lands and Mines, Fredericton, N.B.

**Quebec.**—The mining lands of Quebec are administered by the Minister of Mines, subject to the provisions of the Quebec Mining Act (c. 80, R.S.Q., 1925) and amendments.

In townships the Crown retains full mining rights on lands granted subsequently to July 24, 1880, and, in the case of gold and silver, on lands granted previously to that date. All mining rights belong to the Crown in most of the seigneuries.

Mining lands up to 200 acres can be acquired by staking the ground as prescribed by the Mining Act. Claims must be recorded and 25 days work per claim done within 12 months, when a mining licence is granted upon payment of 50 cents an acre and a recording fee of \$10. The licence is renewable annually. When a mineral occurrence of importance has been found, the mining rights can be purchased as a mining concession for \$5 per acre for superior minerals and \$3 per acre for inferior minerals.

Mining operators must make annual returns to the Minister. Taxes are payable on annual profits at rates graduated up from 3 p.c. A mining inspector is appointed in each mining division for the administration of the mining laws and regulations.

Information and statistics on mining operations and geological explorations are to be found in the Annual Report of the Quebec Bureau of Mines.

**Ontario.**—Ontario owns and administers for mining purposes, through her Department of Mines, all the Crown lands within her boundaries except Indian lands. Mining lands are subject to the provisions of the Mining Act (c. 45, R.S.O., 1927). Title is a grant in fee simple, except in provincial forests, where the lands are leased. A resident mining recorder is appointed for each mining division in the mineral areas. There is a tax of 5 cents per acre per annum on patented and leased mining lands in unorganized territory. Other taxation is on the net profits, the rate being 3 p.c. up to \$1,000,000; 5 p.c. from \$1,000,000 to \$5,000,000 and 6 p.c. on the excess above \$5,000,000. The first \$10,000 of profit is exempt. There is no apex law, all claim boundaries extending vertically downwards. Disputes are settled by the recorder, or, on appeal, by the judge of the Mining Court of Ontario.

A miner's licence is necessary to stake out or acquire Crown lands for mining purposes, fee \$5 per year for an individual; for companies, \$100 on each million dollars capital. The holder may stake out for himself three claims in any and every mining division, and six additional for other licence holders, but not more than three for any individual licensee. A mining claim in unsurveyed territory is a square of 20 chains to a side (40 acres) with lines N.-S. and E.-W. astronomically. Where land is subdivided into lots a claim may be an eighth, a quarter or a half lot, *i.e.*, up to 50 acres.

There are special provisions regarding petroleum, natural gas, coal and salt on the James Bay slope, where these substances may be searched for under authority of a boring permit. A total of 1,920 acres may be taken up by an individual in blocks of 640 acres. Certain areas have been withdrawn from staking.

Full information concerning mineral resources and mining laws may be obtained by writing the Department of Mines, Parliament Buildings, Toronto, Ontario.

**Manitoba.**—With the transfer of the natural resources to Manitoba on July 15, 1930, control of most of the public lands passed to the Department of Mines and Natural Resources of the Manitoba Government.

The Mines Act (c. 27, 1930) and regulations thereunder govern the administration and leasing of: (1) Mineral claims—gold, silver, copper, zinc, etc.; (2) Boring permits—coal, natural gas, oil shale, petroleum and salt; (3) Quarrying locations—granite, limestone, marble, slate or any building stone, gypsum, gravel, marl, peat and sand.

A miner's licence is necessary to stake out Crown lands for mining purposes; fee is \$5 for an individual and larger amounts for mining partnerships and mining companies. A licensee may, in any one licence year and in any one mining division, stake out for himself not more than three mineral claims and not more than six for other licensees, being a maximum of nine in all, provided that not more than three claims shall be staked out or applied for on behalf of any other such licensee. He may also obtain one boring permit or one quarrying location.

A mineral claim in unsurveyed territory is a square of 1,500 feet (51.65 acres) with lines N.-S. and E.-W. astronomically. A boring permit allows 640 acres to be taken up and a quarrying location may cover an area up to 40 acres. The fee is \$5 for recording a claim located by the licensee and \$10 if recorded on behalf of another licensee. After recording, 25 days work per claim must be done per year for 5 years. A maximum of nine claims may be grouped for the purpose of this work. When 125 days work has been done, and certain other requirements complied with, a lease is granted. The cost of the survey may be reckoned as one years work done on the claim.

A boring permit good for one year is necessary to search for oil, coal, gas or salt. If mineral is discovered a 21-year lease may be obtained subject to annual rental and certain annual work.

Lands containing granite, limestone, marble, slate or any building stone, together with clay, gravel, gypsum or sand may be leased at an annual rental, provided \$2.50 per acre per annum be expended in taking out the material.

For a copy of the regulations governing the disposal of mineral rights, apply to the Director, Mines Branch, Department of Mines and Natural Resources, Winnipeg, Manitoba. Mining recorders' offices are located at Winnipeg and The Pas.

**Saskatchewan.**—On Oct. 1, 1930, Saskatchewan came into control of its natural resources, which had previously been controlled and administered by the Dominion. By the Mineral Resources Act of 1931, regulations, differing somewhat from those of former Dominion laws, have been brought into force dealing with coal, petroleum and natural gas, and placer. Except for these changes, the regulations are similar to the former Dominion ones.

**Coal.**—The area which may be taken for a location is now from 20 to 640 acres. Application may be made by mail or in person and any eligible person may apply

for three locations. The length of a location must not exceed three times the breadth. The minimum required to be mined annually is 5 tons per acre. Prior to commencing, a lessee must secure a permit to operate.

*Petroleum and Natural Gas.*—Applications may be made by mail or in person. The area of a location for unsurveyed land may be 160 to 1,920 acres but, while one applicant is allowed three locations, the total area must not exceed 1,920 acres. A permit must be obtained before commencing operations and all drillers must secure a licence of competency to ensure that drilling will be efficiently carried out. The record of a driller may be obtained by payment of a fee. Operators are required to furnish a substantial bond to guarantee compliance with the regulations.

Permits to prospect for oil and gas are granted under similar regulations except that a cash rental of 10 cents per acre is required and a bond of 40 cents per acre which is forfeited if work to determine structure is not carried out within one year.

*Placer.*—These regulations remain as under Dominion administration except that 30 instead of 10 adjoining claims may now be grouped.

The Saskatchewan Mines Act provides for the competency of mine managers and pit bosses, for the reporting of accidents, and generally for the welfare and safety of those employed in the production of minerals.

For further information apply to the Department of Natural Resources, Regina, Saskatchewan.

**Alberta.**—Since the Dominion Government in 1930 transferred control of the natural resources lying within the boundaries of Alberta to the Provincial Government, the leasing or disposal of mineral lands or rights is administered under provincial laws and regulations. However, mineral lands or rights within the province are being administered by the Provincial Government in accordance with the Dominion mining laws and regulations in force at the time of the transfer.

The Coal Mines Regulation Act of the province of Alberta and regulations made thereunder make provision for the safe operation of mines in the province, applying to mines of coal, ironstone, shale, clay and other minerals. Operations must be under the control of officials who hold certificates granted after suitable examination. A staff of inspectors is provided to administer the regulations. Monthly reports of operations must be returned to the Minister.

The Coal Sales Act requires that all coal mines shall be registered by name and all coal produced in Alberta sold under the registered name. The Coal Miners' Wages Security Act requires all coal operators to provide bond to insure the payment of wages, unless exemption is obtained through the Board of Public Utility Commissioners.

**British Columbia.**—The Department of Mines, organized under the provisions of c. 163, R.S.B.C., and amendments, administers mineral lands, and has charge of all matters relating to mining, including the Bureau of Mines and all offices established under the Bureau of Mines Act and all Government offices in connection with the mining industry.

The terms of the mining laws are favourable to the prospector, fees and rentals being small. On a lode mine of 51 acres an expenditure of \$500 in work, which may be spread over 5 years, is required to obtain a Crown grant, while surface rights are obtainable at a figure in no case exceeding \$5 per acre. Any person over the age of

18 and any joint stock company can obtain a "free miner's certificate" on payment of a fee, which for the individual is \$5 per annum and for a joint stock company either \$50 or \$100 per annum depending on capitalization. Mineral claims located under the provisions of the Mineral Act must not exceed 1,500 square feet.

*Placer.*—Placer mining is governed by the Placer Mining Act and its scope is defined as "the mining of any natural stratum or bed of earth, gravel, or cement mined for gold or other precious minerals or stones".

*Placer Claims.*—Placer claims are of 3 classes, as follows: (1) Creek diggings—250 feet long and 1,000 feet wide, 500 feet on each side of the stream; (2) Bard diggings—250 feet square on a bar covered at high water, or a strip 250 feet long at high water, extending between high-water mark and extreme low-water mark; (3) Dry diggings, over which water never extends—250 feet square.

A placer claim must be worked by the owner, or someone on his behalf, continuously during working hours. Discontinuance for 72 hours, except in closed season, lay-over, leave of absence, sickness or other reason satisfactory to the Gold Commissioner, is deemed abandonment. To hold a placer claim more than one year, it must be again recorded before expiration of the year.

*Placer Leases.*—Leases of unoccupied Crown lands approximately 80 acres in extent may be granted by the Gold Commissioner of the district, the annual rental for same being \$30 and the annual expenditure required in development work \$250. Dredging leases on rivers below low-water mark also are granted for 5 miles; the annual rental for same is \$25 per mile and the annual expenditure required in development is \$1,000 per mile, the value of any new plant or machinery employed to count as development. Leases of precious stone diggings, 10 acres in extent, may also be obtained.

## Section 2.—Summary of General Production.

Since 1886, the first year that the Geological Survey issued complete returns of mineral production, Canada has shown a fairly steady growth in mineral output. In that year the per capita production was only \$2.23; in 1901, five years after the Yukon discoveries, production totalled \$12.16 per capita, but there was a falling-off from 1902 to 1904. Thereafter, owing to the discovery of silver in the Cobalt area, the development of the copper-nickel ores of the Sudbury district, the opening up of the gold mines of Porcupine and Kirkland Lake in Ontario, the improvements in metallurgical practice which led to the recoveries of large quantities of lead and zinc from British Columbian ores, and the discoveries and developments in Quebec and Manitoba, the per capita production rose to \$31 in 1929, although owing to world-wide economic depression it dropped to \$18.20 in 1932, later increasing to \$20.73 in 1933 and about \$25.62 in 1934 with the general improvement in economic conditions.

In 1933, the latest year for which complete world figures of the Imperial Institute are available, Canada stood first in the production of asbestos and nickel, second in the output of gold and cobalt, third in copper, silver, zinc, and lead, and thirteenth in the production of coal. During that year Canada produced approximately 82 p.c. of the world production of nickel, 75 p.c. of the asbestos, 20 p.c. of the cobalt, 13.2 p.c. of the gold, 9.3 p.c. of the silver, 13.4 p.c. of the copper, 10.2 p.c. of the lead and 10.2 p.c. of the zinc.

The Preliminary Report on the mineral production of Canada, based on a special survey of the industry by the Bureau and released on Mar. 17, 1935, shows a total valuation of \$277,492,263 for the mineral output of the Dominion in 1934 compared with \$221,495,253 in 1933. This represents an increase of 26 p.c. and reflects the continuation of the improved conditions commencing in 1933.

Prospecting for gold ores and the exploration and development of known auriferous deposits were more extensively carried on throughout Canada during 1932, 1933 and 1934 than for many years. These activities were common to both the older producing camps and new areas. The higher price for gold stimulated the study and examination of new deposits or ore zones heretofore considered of doubtful economic importance. In certain of the older camps properties closed prior to the revaluation of gold were reopened and placed in production or further explored as to their possibilities. In some of the producing mines the higher price for the metal permitted a very considerable extension or increase of pay ore with the resultant milling of rock of lower gold content and important increases in ore reserves. During 1933, notable gains in production, compared with 1932, were recorded in the base metal mining industry and these gains were extended during 1934. The more outstanding of these were in copper, lead, nickel and zinc and it is creditable to the organizations engaged in the production of these particular metals that they should be able to expand production at the prevailing low level of prices.

Production of various non-metallic minerals, especially asbestos and coal, realized important gains in 1933 and 1934. The gains in the structural materials industries were particularly encouraging during 1934, as recessions had been severe during the period of business depression.

### Subsection 1.—General Statistics of Mineral Production.

In Table 1 will be found the total values of the minerals produced in Canada in each year since 1886, while Table 2 gives the details of the mineral production of 1932 and 1933, with the percentage of increase or decrease in the latter year, and Table 2A preliminary figures of production for the principal minerals in 1934.

1.—Value<sup>1</sup> of Mineral Production in Canada, calendar years 1886-1934.

| Calendar Year. | Total Value. | Value per capita. | Calendar Year. | Total Value. | Value per capita. | Calendar Year.          | Total Value.             | Value per capita.  |
|----------------|--------------|-------------------|----------------|--------------|-------------------|-------------------------|--------------------------|--------------------|
|                | \$           | \$                |                | \$           | \$                |                         | \$                       | \$                 |
| 1886.....      | 10,221,255   | 2-23              | 1902.....      | 63,231,836   | 11-51             | 1918....                | 211,301,897              | 25-93              |
| 1887.....      | 10,321,331   | 2-23              | 1903.....      | 61,740,513   | 10-90             | 1919.....               | 176,686,890              | 21-26              |
| 1888.....      | 12,518,894   | 2-67              | 1904.....      | 60,082,771   | 10-31             | 1920.....               | 227,859,665              | 26-63              |
| 1889.....      | 14,013,113   | 2-96              | 1905.....      | 69,078,999   | 11-51             | 1921.....               | 171,923,342              | 19-56              |

<sup>1</sup>According to Preliminary Report, March, 1935. All figures are subject to revision.<sup>2</sup>Exclusive of a small production of selenium, tellurium, radium and uranium, statistics of which cannot be published owing to there being less than three producers.<sup>3</sup>Sulphur content of pyrites shipped and estimated sulphur contained in sulphuric acid made from smelter gases.

**Volume of Mineral Production in Recent Years.**—An interesting comparison of the mineral production of the two years 1932 and 1933, as to quantities and values, is furnished in Table 3.

The percentage increase or decrease in quantity production of individual minerals is shown in Table 2, pp. 376-377, but, owing to the many different units in which the quantities of different minerals are expressed, the total volume of production from year to year is difficult to compare, while the wide variations in prices make comparisons of total values misleading. Table 3 constitutes an attempt to overcome these difficulties by working out what the values would have been in the later year if prices had remained the same as in the earlier, thus obtaining the increases or decreases due to changes in quantity alone; these are shown in the last column.

The total value of mineral production in 1932 decreased 16.1 p.c. from 1931. Reduced quantities accounted for a decrease of 15.5 p.c. The contraction was particularly severe in the quantity of clay products (51.8 p.c.), other structural materials (44.4 p.c.) and non-metallic minerals (24.7 p.c.). Mineral production in 1933 recovered from the low level of 1932 to a value approaching that of 1931. However, Table 3 shows that this recovery of value was made up in large measure of higher prices which accounted for an increase of 10.9 p.c. in value, while larger quantities accounted for an increase of only 4.9 p.c. The recovery from 1932 was largely in both the quantities and prices of metallic minerals. The quantities of clay products and other structural materials produced in 1933 were below the low levels established in 1932.

Mineral production in Canada reached its highest recorded total value of \$310,850,000 in 1929. During 1930 the production of metallic minerals increased still further in volume by 11.8 p.c., though declining prices reduced the total value of metal production, while non-metallic minerals and structural materials declined in both volume and value. By 1931 declining prices curtailed the volume of metallic minerals so that in that year and the next (1932) there were declines in both volume and value in all the major branches of mineral production. However, the production of metallic minerals in 1932 was still 3.7 p.c. greater in volume than in 1929, although there had been drastic declines in prices resulting in a reduction of 27.5 p.c. in total value. In that same year the production of fuels was 28.9 p.c., of other non-metallics 47.8 p.c., of clay products 72.1 p.c., and of other structural materials 57.6 p.c. smaller in volume than in 1929. The general decline in prices was arrested by 1933 and in that year the prices of metallic minerals and of non-metallics other than fuels showed a stronger trend. This was accompanied by an increased volume of production in both metallic and non-metallic minerals, although there were further declines in structural materials. Compared with 1929 the volume of production during 1933 was 12.3 p.c. greater for metals, 28 p.c. lower for fuels, 41.2 p.c. lower for other non-metallics, 80.1 p.c. lower for clay products and 68.7 p.c. lower for other structural materials. The grand total value of mineral production in 1933 was \$89,355,000 (28.7 p.c.) less than in 1929. The decline due to lower prices was 11.7 p.c., while that due to a generally smaller volume was 17 p.c., the increased volume of metals being more than offset by the contraction in other branches of the mineral industry. Preliminary figures for 1934 indicate a change

to an upward trend in structural materials, the most severely restricted branch of the industry, and a continuation of the upward trend in metals, fuels and other non-metallic minerals. The favorable change in the production of structural materials during the past year accompanied an increase in the activity of the construction industry.

**3.—Mineral Production of Canada, Compared as to Quantity and Value, calendar years 1932 and 1933. ("000" omitted.)**

| Item.                                           | Actual Value 1933. | Value at Prices of 1932. | Actual Value 1932. | Actual Increase (+) or Decrease (-). | Due to Higher (+) or Lower (-) Prices. | Due to Larger (+) or Smaller (-) Quantities. |

**Subsection 2.—Provincial Distribution of Mineral Production.**

The principal mineral-producing province of Canada in recent years has been Ontario, which accounted for 41.6 p.c. of the Dominion total in 1932 and 49.8 p.c. in 1933. The rise in the price of gold has been especially favorable to Ontario's mineral production, while the Sudbury nickel-copper deposits are another outstanding feature in the mineral resources of the province. British Columbia holds second place in the value of minerals produced with 14 p.c. and 13.9 p.c. of the Dominion totals in 1932 and 1933, respectively. The mineral resources of British Columbia are probably more varied than those of any other province, since its production includes most of the important metals as well as substantial quantities of coal. Mineral production in Quebec has increased greatly in the post-war period, accounting for 12.8 p.c. of the total for Canada in 1932 and 12.7 p.c. in 1933. Whereas formerly non-metallics (especially asbestos) and structural materials made up nearly all of its mineral production, more than half the value is now made up of metals, particularly gold and copper. Nova Scotia and Alberta are the most important coal-producing provinces. Manitoba in recent years has been making a growing contribution to the production of gold, copper and zinc in the Dominion. The total value of mineral production in each of the provinces for each year since 1910 is given in Table 4.

## 5.—Mineral Production of Canada, by Provinces, calendar year 1932—continued.

| Mineral.                          | Nova Scotia.      | New Brunswick.   | Quebec.           | Ontario.          | Manitoba.        | Saskatchewan.    | Alberta.             | British Columbia. |

5A.—Mineral Production of Canada, by Provinces, calendar year 1933.

NOTE.—The mineral production of Yukon and the Northwest Territories during the calendar year 1933 was as follows in quantities and values: Gold 39,493 fine oz., \$1,129,500 (including premium); lead 3,099,505 pounds, \$74,128; silver 2,227,476 fine oz., \$842,717; coal 862 tons, \$3,670; and petroleum 4,608 brl., \$23,037; total \$2,073,052. Radium and uranium salts were produced in Canada during 1933 from ores mined in the N.W.T., but statistics pertaining to these minerals are not available for publication. For Dominion totals see pp. 376-377.

### Section 3.—Industrial Statistics of Mines and Minerals— Capital, Labour, Wages, etc., in Principal Industries.

Annual statistical reports on the mineral production of Canada have been published for many years, first by the Geological Survey, later by the Mines Branch of the Department of Mines and, since 1921, by the Dominion Bureau of Statistics. Prior to that year the annual statistics of mines were confined chiefly to a presentation of the quantity production of each of the minerals and their value at average market prices for the year. The scope of the statistics now includes a general review of the principal mineral industries, such as the copper-gold, silver-lead-zinc and nickel-copper industries, as well as a section on metallurgical works. The additional data include such features as capital employed, numbers of employees, wages and salaries paid, and gross and net production. The aim has been to extend the mining statistics beyond a summary of the production of individual minerals by approaching the subject from the standpoint of industrial organization, definitely illustrating the place which mining holds in the scheme of Canadian productive enterprise.

The values produced by the metallic industries given in Tables 6 and 7 are those reported by the operating companies, and are in each case the settlements received for shipments by mine operators and the additional value obtained when the smelting of these ores is completed in Canada. The totals indicate more nearly the actual return to the different industries than do the values for the several metals in Table 2 of this chapter, where, in the cases of copper, lead, zinc and silver, the values are computed by using the average prices for the year in the principal metal markets. Furthermore, the production figures of Table 2 include all quantities shipped from the mines, while metals absorbed in new metallurgical operations or remaining in stock at smelters and refineries are not included in the industrial figures of Tables 6 and 7. On the other hand, some imported ores and concentrates are treated in Canadian non-ferrous smelting and refining works. The net value of the products

of these plants includes, therefore, the net value of the metals recovered from these imported ores and to this extent the net sales shown in Tables 6 and 7 include products not of Canadian origin. Furthermore, up to and including 1931 the total value of Canadian mineral production as shown in Table 1 was computed with gold valued at the standard price of \$20.671834 per fine oz., and thereafter at the same price plus the estimated amount of exchange equalization paid the producer, whereas the totals given in Tables 6 and 7 include the actual receipts for gold produced as reported by the producers. For these reasons the industrial statistics are somewhat at variance with the figures representing the computed value of metallic mineral production.

The total net value of products of the fuel industries in Table 7 is less than the total production of fuels in Table 2, because the net value of products of the industries is confined to that for which the operators receive some economic return, while the production of the fuel commodities includes all of those commodities produced, whether the producer actually receives payment in any form for them or not. Thus in coal mining, the industrial values in Table 7 include only coal sold, supplied to employees for domestic consumption, or used in making coke and briquettes, whereas the figures of coal production as shown in Table 2 include, in addition to the above, coal consumed for power and other purposes in the coal-mining operations and also the difference between coal put on the bank and lifted from the bank. Petroleum producers have a larger monetary return than the actual value of the petroleum produced because many oil wells also produce large quantities of natural gas. On the other hand, the natural gas industry receives a smaller return than the total value of all natural gas produced because some of the gas is produced by the petroleum industry, because of leakage or other loss in piping gas to the consumers, and because a small amount of natural gas is produced by private individuals or groups from their own wells for their own consumption, without any industrial organization intervening between producer and consumer.

For other non-metallic minerals (if the small production of peat normally included with fuels is deducted) and clay products and structural materials, returns to the producing industries are the same in each case as the total value of the mineral commodities produced.

**The Growth of the Mining Industry in Recent Years.**—Annual publication of industrial statistics of the mining industry, showing capital employed, the number of employees, the salaries and wages paid, the cost of fuel and electricity, and the net value of the products did not commence until 1921. In connection with the item of capital, operators are requested to report *only the capital actually invested in the enterprises*, including (1) present value of lands, buildings, plant, machinery and tools, (2) cost of materials on hand, supplies, finished products and ore on dump, and (3) cash, trading and operating accounts and bills receivable. It should be specially noted that no estimate of undeveloped ores is included in the capital. Indeed, capital expenditures in mining ventures are frequently very difficult to designate. For instance, purely exploratory workings should be charged to current expenses, but if these exploratory workings open up new ore resources and become the channel by which such ore is utilized, such workings become part of the productive plant and as such their cost is an item of capital. In these circumstances, the actual amount of capital employed in mining enterprises is uncertain and the figures of capital should be used with such reservations in mind.

The substantial growth of the mining industry in Canada during the post-war years is established by the summary statistics of Table 6. From 1922 to 1929—a period of slowly declining prices—the output increased by 72 p.c., capital investment by 76 p.c., employment by 53 p.c., and the salaries and wages paid by 65 p.c. Progress was most rapid in the metallic mineral industries, where the expansion in net production amounted to 170 p.c. with proportionate increases in capital and employment. The period from 1922 to 1929 was marked by a rising cycle of activity in construction. This is reflected in the expansion of industries engaged in the production of clay products and other structural materials. The output of this group of industries increased by 47 p.c. during the period, while, within the group, progress was much greater in industries producing cement, gravel and stone than in the clay products industries. The group of non-metallic mineral industries remained relatively stationary in contrast to the other two main groups during this period of rapid expansion. This may be attributed to the fact that coal mining is the predominant industry in the non-metallic group and, under increasing competition from oil fuels and hydro-electric power, did not participate in the general industrial expansion of the period.

Since 1929 the mining industry in Canada has been affected by the world-wide economic disturbances which have so greatly influenced industries in all countries. It is instructive to trace the effects of the depression in the industrial statistics of mining. The course of the depression was accompanied by a very drastic decline in the prices of most of the principal metals, especially copper, lead, zinc and silver. Indeed, while prices of these metals at the beginning of 1935 have risen somewhat above their low points, they are still at a low level. In the case of gold, on the other hand, since 1931 the price has risen to a level about 69 p.c. above that formerly prevailing. Under the influence of these price changes, the value of the net production of the metallic mineral industries declined by 27 p.c. from 1929 to 1932, with a decline of 29 p.c. in employees, 30 p.c. in salaries and wages paid and 24 p.c. in the value of fuel and electricity used. But, since the higher price for gold stimulated its production and the readjustment of costs stabilized the base metal industries, metal production in 1933 showed a good recovery, the net sales in 1933 being only 8 p.c. below those of 1929, employees 18 p.c. below, salaries and wages 25 p.c. below, and the cost of fuel and electricity 8 p.c. above 1929. While industrial statistics for 1934 are not yet available, the production figures for this latest year indicate a metal production valued at about 18 p.c. more than the former peak year 1929. Doubtless in reaching this new record the influence of gold is important through increased production, higher value, and its association with other metals, especially copper. However, in 1934, not only gold but nickel, copper, lead and zinc were all produced in Canada in larger quantities than ever before, from which it must be concluded that the producers of these metals are able to operate profitably at even the low prices prevailing for copper, lead and zinc, and that a return to former average price levels would find the Canadian metal-mining industry firmly established on a much larger scale than ever before.

Among the non-metallic industries the most important is coal mining. During the depression, the demand for coal declined owing to reduced requirements for fuel in industrial and transportation activities. Similarly the demand for asbestos and gypsum has been affected by the lower level of industrial and construction operations. Salt has been an exception to the general rule, as its production has been well maintained throughout. Indeed, in 1932 and 1933 the net sales of the salt-

producing industry were about 23 p.c. above those of 1929. Taking the group of non-metallic industries as a whole, net sales declined by 32 p.c. from 1929 to 1932, employment by 21 p.c. and salaries and wages by 36 p.c., and, while net sales increased slightly in 1933 from the low point of 1932, the decline continued in employment and total remuneration of employees. Production in 1934 showed a decided improvement, probably indicating that costs have been so readjusted within the group as to place production again on a profitable basis and ready to expand with increasing demand.

The production of clay products and other structural materials is directly dependent upon construction activities within Canada. During the early years of the depression, these activities were partly maintained by governmental relief projects and by the carrying to completion of some large operations which had commenced before 1930. As a result, construction reached its lowest level in Canada during 1933, and the group of industries producing clay products and other structural materials was at a lower level of operations in that year than in any other year recorded since 1921. From 1929 to 1933 there was a decline of 71 p.c. in net sales, 69 p.c. in employees, 74 p.c. in salaries and wages and 76 p.c. in expenditures for fuel and electricity, a large item in the cost of production in these industries. However, construction was more active in Canada in 1934 than in 1933 (see p. 512) and this increased activity was accompanied by a welcome change to a rising trend in the production of clay products and other structural materials.

**6.—Summary of the Principal Statistics of the Mineral Industries in Canada, by Groups, 1921-33, and by Provinces, 1932 and 1933.**

<sup>1</sup>This figure not given by provinces in recent years. <sup>2</sup>Gross value less freight and treatment charges and less value of ores charged in the case of smelters. <sup>3</sup>Electricity was not included in 1921 and 1922.

<sup>4</sup>Fuel and electricity used for metallurgical purposes and not included above consisted of: bituminous coal from Canadian mines, 244,701 tons valued at \$1,657,991; imported bituminous, 109,005 tons at \$578,272; coke, 129,605 tons at \$1,165,432; fuel oil, 7,218,294 gal. at \$327,775; wood, 5,489 cords at \$28,963; manufactured gas, 45,886 M cu ft. at \$1,998; electricity, 380,331,833 k.w.h. at \$1,232.104; and other fuel at \$22,079; total value, \$5,017,614.

**The Principal Mineral Industries.**—A summary of the industrial statistics of the principal mineral industries operating in Canada in 1932 and 1933 is presented in Table 7. Coal mining has the largest labour force and the largest labour bill. In fact, in the years 1932 and 1933 salaries and wages in coal mining amounted

to 71 p.c. and 66 p.c. of the value of net sales. This was probably an abnormally high proportion owing to declining output and prices and abnormally low profits during those difficult years. Auriferous quartz mining was second to coal mining with about half the number of employees. Its salaries and wages bill was nearly as great, however, as that of coal mining, since employment is much less subject to seasonal fluctuations. The smelting and refining industry was third in the number of its employees and in salaries and wages paid.

**7.—Summary of the Principal Statistics of the Mineral Industries of Canada, by Industries, 1932 and 1933.**

| Industry and Year.                        | Firms.     | Capital Employed.  | Employees.    | Salaries and Wages. | Fuel and Electricity. | Net Sales. <sup>1</sup> |

<sup>1</sup>Value of shipments by mine operators and of products sold by their metallurgical works, less estimated cost of ores, concentrates, matte, etc., treated, irrespective of their origin. The major part of the value of ores treated is included as products of mines and mills, but there is necessarily a lag between production or ores and sales of smelter products, while some imported ores are also treated in Canadian smelters.

<sup>2</sup>Value added by smelting and refining.

<sup>3</sup>Includes a small production of peat, normally included in fuels.

## Section 4.—Production of Metallic Minerals.

### Subsection 1.—Gold.

Canada has been a gold-producing country for over 75 years. During the last half of the 19th century production was chiefly from placer operations in British Columbia and Yukon, while during the present century there has been a rapid growth of production from lode mining both of auriferous quartz and of gold in association with other metals. Gold production in Canada attained its earlier maximum in 1900, when the Yukon production reached its highest point and 1,350,057 fine oz. of gold were produced. The quantities and values of gold produced in Canada are given by provinces for 1911 and subsequent years in Tables 8 and 9. The preliminary official estimate for 1934 is 2,964,400 fine oz.

In 1931 the value of gold produced in Canada exceeded that of coal for the first time. Producers of gold have benefited in recent years not only from the general decline in the prices of other commodities with a consequent reduction in their operating costs, as well as an increase in the purchasing power of their product, but also from the rise in the price of gold in the world market. The more outstanding events associated with this rise in price may be briefly outlined. The United Kingdom suspended specie payments on Sept. 21, 1931, and the gold exchange value of the pound sterling declined rapidly. The Canadian Government first assumed control of gold exports by a licensing system and later undertook to purchase all new gold bullion produced in the Dominion, paying the producer a premium over the standard price to equalize the exchange difference. The United States departed from the gold standard on April 19, 1933, and on Jan. 31, 1934, the United States' Treasury announced that it would buy gold at \$35 per fine oz.; thus establishing a new par of  $15\frac{5}{16}$  grains for the U.S. dollar. On June 15, 1934, the Canadian Parliament passed legislation instituting a special tax on gold produced in Canada. This tax applied only to producing companies which had paid dividends continuously since the beginning of 1933, and consisted of a levy of 25 p.c. on the premium value of gold produced from ore mined in Canada, provided that the tax did not reduce the price received by the producer below \$30 per fine oz. Deductions for income tax were allowed.<sup>1</sup>

In the circumstances outlined above gold has ranked first among the minerals of Canada since 1931. Under the stimulus of higher prices prospecting for gold has been more active during the past two years than ever before. Favourable results from these activities, with new mines coming into production and expansion in numerous producing mines, give every prospect for a continued increase in gold production.

**Ontario.**—Although gold was first discovered in 1866 in Hastings Co. and was later found and worked at many points from there to the lake of the Woods in the west, a distance of roughly 900 miles, no permanent gold-mining industry was established until 1911, when the Porcupine Camp was opened up. Soon afterwards the discovery of gold in the Kirkland Lake area, on what is now the Wright-Hargreaves Mine, led to the development of this second camp. The Lake Shore Mine in this camp has latterly had a larger production than that of any other Canadian gold mine. Active prospecting and development have been carried on during recent years in a number of Precambrian areas in Ontario. Properties brought into production include the Howey and Moss gold mines in the northwestern part of the province, the Ashley and Young-Davidson in Matatchewan, and the Little Long

<sup>1</sup> In the Budget of Mar. 22, 1935, this form of tax was relinquished, and compensating arrangements were made in the income tax regulations providing for reduced depletion allowances to mines to offset anticipated loss in revenue.

Lac, St. Anthony, Casey Summit, Pickle Crow, J. M. Consolidated, Bidgood and Central Patricia in other areas. During 1934 the older gold mines of the Porcupine, Kirkland Lake and Michipicoten areas experienced a successful year with increased tonnages treated in all three camps. New gold discoveries in the Sturgeon River area resulted in a colorful "rush" of old-time proportions.

**British Columbia.**—The discovery of gold in paying quantities was an epoch-making event in the history of British Columbia. In the late '50's, alluvial gold was discovered along the Thompson river and in 1858 the famous Fraser River rush took place. The extraordinarily rich deposits of Williams and Lightning creeks, in the Cariboo district, were discovered in 1860 and three years later the area had a production of alluvial gold valued at \$4,000,000. In the northern part of the province, the Atlin division of the Cassiar district was prospected in 1892. Then the introduction of lode mining resulted in a rapidly increasing production until 1902, when previous records were surpassed by an output of more than 288,000 fine oz. Except for the maximum output of 297,459 fine oz. in 1913, the record of 1902 was not again equalled until 1934. Though the bulk of the gold obtained in the Cordilleran region has been derived from the placer deposits of the central portion of the region from Yukon at the north almost to the International Boundary at the south, yet a large amount, averaging 178,039 fine oz. between 1913 and 1921, was obtained by lode mining, largely of the copper-gold ores of the Rossland and Yale Boundary districts. The copper concentrates of the Britannia Mine also contain gold, as does the blister copper made at Anyox. The output of gold in British Columbia has been in part maintained by the successful operation of the Premier Mine on the Portland canal and recently by the mines of the Bridge River district, including the Pioneer, Bralorne and others from which production is expanding. Placer prospecting in British Columbia experienced a distinct revival during the 1932 and 1933 seasons and resulted in pronounced activity, especially in the Stikine, Liard, Cariboo and Atlin districts.

**Yukon.**—The discovery of gold in the Yukon River valley was reported in 1869, and bar-mining on the tributaries of the Yukon was conducted with increasing profit between 1881 and 1886. Ten years later, rich discoveries were made in creeks of the Klondike river, a right-bank tributary joining the Yukon at what is now Dawson city, and one of the greatest rushes in history was made to this locality. The richest streams in the district were Bonanza creek and its principal tributary, the Eldorado. There is still a considerable production of gold from alluvial operations principally in the form of dredging.

**Nova Scotia.**—Gold was discovered in Nova Scotia in 1860. Two years after the discovery gold valued at nearly \$142,000 was recovered from the quartz veins; an annual, though in recent years declining, output has been reported since that time. However, in 1933, gold mining activities were again more widespread with the industry showing signs of a general revival.

**Quebec.**—Although Quebec produced gold as early as 1823, production consisted only of the small quantities recovered in the treatment of the lead and zinc ores of the Notre-Dame-des-Ange's district and from the gravels of the Chaudière river. Important discoveries of copper-gold deposits, however, were more recently made at Rouyn, in the northwestern part of the province, adjacent to the Kirkland Lake district of Ontario. Smelting facilities became available for this region as the result of the opening of the Noranda smelter in December, 1927. The opera-

tion of this smelter, together with the development of gold properties in the north-western part of the province, has established Quebec as the second largest gold-producing province. The established producing mines, including Siscoe, Granada and Bussières, had their mills in continuous operation throughout the past year. During 1933 and 1934 extensive developments of new gold properties in the Rouyn district resulted in the commencement of milling at the Beattie, Cadillac-O'Brien, McWatters, Thompson-Cadillac, Sullivan Consolidated and Green-Stabell gold mines. Several prospects situated in Pascalis, Louvicourt, Senneville and Bourlamaque townships were active and reported encouraging results. The copper-gold mining and smelting operations of Noranda Mines were continuous and the Company commenced construction of a 500-ton cyanide plant.

**Manitoba.**—The presence of gold-bearing ores in Manitoba has been known for a decade or more and the gold production of this province is now mounting. The Central Manitoba, an auriferous-quartz property in the Beresford Lake area east of lake Winnipeg, has produced gold steadily for several years and the San Antonio in the Rice Lake field has had a mill operating since May, 1932. Milling operations were resumed in 1934 by Diana gold mines and important development work was carried out at the Gunnar, Forty-four, God's Lake, Smelter, Gabrielle, Hanson Manitoba, Island Lake, Wylie Dominion and Wallace Lake gold mines. The major part of the gold of the province, however, continues to be produced as a by-product from the Flin Flon smelter which treats copper-zinc ores.

#### 8.—Quantities of Gold Produced in Canada, by Provinces, calendar years 1911-34.

NOTE.—For the years 1862 to 1910, see Canada Year Book, 1916-17, pp. 268 and 269.

\*Preliminary figures.

**World Production.**—A sketch of the development of the gold-mining industry of the world since the discovery of America may refer to four successive periods. During the first period, extending from 1493 to 1760, the annual production averaged nearly 337,000 fine oz. The placer mining of Brazil and Colombia swelled the average output of the last 60 years of the period to about 606,000 fine oz. per year.

The production of Russia from placer mining was a considerable factor in the next period, extending from 1761 to 1840, that country retaining first rank among the world's producers until 1837. The average annual production during the period was 565,500 fine oz.

The third period, extending from 1841 to 1890, was notable for the remarkable discoveries of gold in California and Australia in 1848 and 1851 respectively. The annual average during the 50 years was 4,937,000 fine oz. For the first decade the average was 1,761,000 fine oz. and for the second 6,448,000, while in the last decade it declined to 5,201,000. The production of the period was contributed chiefly by the United States, Australia and Russia.

In the fourth period, extending from 1891 to the present time, the outstanding features were the entry of South Africa as an important and later as the leading producer, and the phenomenal increase in the output of most of the gold-producing countries through the introduction of the cyanide process. The output was 6,320,000 fine oz. in 1891 and a steady increase was recorded until 1915, when 23,010,000 fine oz. were produced. Thereafter, the great increase in wages and in the other costs of production of an article of fixed value brought about a steady decline to a minimum

production of 15,576,000 fine oz. in 1922. However, the notable decline in general commodity price levels which occurred in 1921 and 1922 again reduced the costs of gold production and the industry responded with an increase to 17,978,000 fine oz. in 1923, to 19,339,000 in 1928, to 22,330,000 in 1931, to 24,151,000 in 1932 exceeding the former maximum of 1915 and to 24,962,000 in 1933. The annual world production for this period is shown in Table 10.

### 10.—Quantities and Values of World Production of Gold, 1891-1933.

(From the Annual Report of the Director of the United States Mint.)

| Year.     | Quantity.  | Value.      | Year.     | Quantity.  | Value.      | Year.     | Quantity.  | Value.      |

| 1905..... | 18,396,451 | 380,288,300 | 1920..... | 16,130,273 | 333,442,345 |           |            |             |

In 1933 the world's chief producers were the Union of South Africa, with a production of 11,013,713 fine oz. or 44.1 p.c., Canada, producing 2,949,309 fine oz. or 11.8 p.c.\*, and the United States, producing 2,276,711 fine oz. or 9.1 p.c. As Australia, Rhodesia and British India were also important producers, about 66.6 p.c. of the world production of 1933 was produced in the British Empire. In 1930 the gold production of Canada first exceeded that of the United States and from then to 1933, Canada has definitely ranked second among the world's producers.

Detailed statistics of world gold production for 1932 and 1933 follow.

\* This percentage, derived from world production as reported by the Director of the United States Mint, is slightly less than that derived from estimates of the Imperial Institute as given on p. 374.

### 11.—Quantities and Values of the World Production of Gold and Silver, by Countries, calendar years 1932 and 1933.

<sup>1</sup> Average price per fine ounce in New York. <sup>2</sup> Estimate, based on United States imports of ore and bullion and interrogatory data. <sup>3</sup> Estimates, based on productions of earlier years. <sup>4</sup> Previous years figures. <sup>5</sup> Totals include other countries with minor productions which are not shown.

**Subsection 2.—Silver.**

Although no official statistics of the production of silver were published prior to 1887, the annual reports of the operating companies showed that from 1869 to 1885 about 4,000,000 oz. of silver, with a probable value of \$4,800,000, were produced in the Port Arthur district in Ontario. From 1887 to 1893 the annual production ranged in value between \$300,000 and \$400,000, and was derived chiefly from Ontario and Quebec. The next three years saw a rapid increase in production, due to the development of the silver-lead deposits of British Columbia, and in 1896 a production worth over \$2,000,000 was recorded. From 1896 to 1905 annual production varied in value between \$2,000,000 and \$3,500,000, rising rapidly during the next five years to 32,869,264 fine oz. valued at \$17,580,455 in 1910, as a result of the discovery of the rich ores of the Cobalt district. Since then there has been a falling-off in quantity, but owing to the higher price of the metal the value of the annual production increased to a maximum of \$20,693,704 in 1918. The post-war depression and the decline in the value of silver caused a low value of production in 1921, but the industry recovered, and in 1930 production amounted to 26,443,823 fine oz. Partly owing to the further decline in the price of silver since that time production has decreased, amounting to only 15,187,950 fine oz. in 1933.

The silver production of Canada is chiefly credited to the silver-lead-zinc ores of British Columbia, the silver-cobalt ores of northern Ontario and the silver-lead ores exported from Yukon. An appreciable amount of silver also occurs in combination with the gold ores of northern Ontario, the nickel ores of the Sudbury district and the copper-gold ores of Quebec, Manitoba and British Columbia. Thus most Canadian silver is produced in combination with other metals.

During 1931 much interest was created by the discovery at Echo bay, Great Bear lake, of mineral deposits in which high-grade native silver was associated with cobalt and radium-bearing ores. The first commercial production from this area occurred in 1932 when shipments were made to the Trail smelter in British Columbia. Production from this new camp was continued in 1933 and 1934.

**Ontario.**—The production of silver in Ontario in 1933 was 4,535,680 fine oz., the greater part of which was derived from the rich silver-bearing ores of the Cobalt district. Considerable quantities were also obtained from the products of the nickel refineries and from crude gold bullion. The Cobalt deposit was discovered in 1903, when the Temiskaming and Northern Ontario Railway was being built from North Bay to the head of lake Timiskaming. Later somewhat similar deposits were discovered at Gowganda, 55 miles northwest, and at South Lorrain, 18 miles southeast of Cobalt. Owing to the depletion of the ore bodies combined with the very low price of silver, operations have been much curtailed in the Cobalt, Gowganda and South Lorrain camps.

**British Columbia.**—In 1926, for the first time since 1905, this province surpassed Ontario in silver production. Quantity of production in 1930 was the greatest on record and amounted to 11,825,930 fine oz., although this record was nearly equalled in 1927 with a production of 11,040,445 fine oz. Production since 1930 has steadily declined to 6,737,057 fine oz. in 1933. Small amounts are recovered from alluvial gold and crude gold bullion, but the Sullivan and Premier mines have been responsible for the greater part of the output from this province. The Sullivan, primarily noted for its lead and zinc production, is the largest producer of silver in Canada. Silver was also recovered from the copper ores and concentrates which were exported for treatment in foreign smelters and from blister copper made at the Anyox smelter.

**Yukon.**—The production of silver in recent years from Yukon has been derived chiefly from the silver-lead ores exported from the Mayo district. The Treadwell-Yukon Co. ceased mining at Keno Hill in the autumn of 1932 and transferred its operations to the Elsa claim on Galena Hill. High-grade ore was mined and shipped from this mine in 1933 after which the camp was abandoned and operations concentrated on the old Silver King mine.

Statistics of the quantities and values of silver produced in Canada are given for the years since 1911 in Table 12, while statistics of the quantities and values produced in the various provinces are given for 1911 and subsequent years in Table 13.

### 12.—Quantities and Values of Silver Produced in Canada during the calendar years 1911-34.

NOTE.—For figures for the years 1887-1910, see p. 361, 1933 Year Book.

<sup>1</sup>Preliminary figures.

**World Production of Silver.**—The world production of silver was estimated by the Director of the United States Mint, as shown in Table 11 of this chapter, at 160,986,798 fine oz. for 1933, a decrease of 2.4 p.c. from 1932 and of 38 p.c. from 1929, when world production reached a record maximum of 260,970,029 fine oz. The silver production of Canada in 1933 was 15,187,950 fine oz., or about 9.4\* p.c. of the estimated world total for that year. This placed Canada third, next to Mexico and the United States.

#### 14.—Quantities and Values of World Production of Silver, with Annual Average Prices, 1860-1933.

<sup>1</sup>At the average par price of a fine ounce of silver in London, excepting the years 1918 to 1922, inclusive, and 1931-33, for which the mean of the New York bid and asked prices was used.

In the preceding historical Table 14 the world production, value and average price of silver are given for each year from 1860 up to the present. During the period from 1860 to 1872, silver was still a monetary base—that is, a standard money—in parts of the western world and the price remained fairly stable at about \$1.32 to \$1.35 per fine oz. (about 15½ oz. silver = 1 oz. gold), although production is estimated to have more than doubled during these 12 years. After the demonetization of silver in Germany and the United States, production continued to increase and by 1889 had nearly doubled again, although the price had declined to 94 cts. In spite of a further increase in production in 1890, the price in that year rose to \$1.05

\*This percentage, based on the world estimate of the Director of the United States Mint, differs slightly from that on p. 374 based on the world estimate of the Imperial Institute.

per fine oz. During the next six years from 1891 to 1897, while annual world production increased only 17 p.c., the price declined nearly 40 p.c. During this same period, world gold production nearly doubled (see Table 10). From 1898 to 1904 annual production remained fairly stationary, while the price fluctuated around 60 cts. From 1905 to 1912 there was a further rise in annual production of about 35 p.c., but the price, while fluctuating between 68 and 52 cts. per fine oz., was practically the same in 1912 as in 1905. During the economic disturbances of the war period, world production was on a lower level, while the price rose to a peak of \$1.12 in 1919 but dropped to 63 cts. in 1921. From then until 1929, world production increased again by 50 p.c. and the price, after a rise to 74 cts. in 1924, declined steadily to 54 cts. On account of the world depression since 1929, production declined, while the price dropped to little more than half the lowest price recorded in any other period shown in the table. The fact that silver is to a great extent a by-product was responsible to some extent for its low price. The year 1934 was a notable one in the history of silver because of the legislation enacted by the United States' Congress and the decision reached at the London Monetary and Economic Conference of 1933. In the United States the Silver Purchase Act became law on June 19, changing the monetary reserve structure of that country, while in Canada the first step towards implementing the London agreement was taken when the Minister of Finance called for tenders as of Aug. 20, for delivery of silver bullion up to the amount of 250,000 ounces.

### Subsection 3.—Copper.

The copper-mining industry has developed at a very rapid rate. A production of 3,505,000 lb. in 1886 had doubled 6 years later. By 1913, the output had increased over twenty-one fold, amounting to 76,976,925 lb. The extraordinary demand for war requirements resulted in an average production from 1916 to 1918 of 115,048,931 lb. In the post-war depression production dropped to less than 43,000,000 lb. in 1922, but recovered rapidly and by 1930 had risen to a new peak of 303,478,356 lb. In the two following years, as a result of the world-wide depression with very low prices prevailing for copper, production declined to 247,679,070 lb. in 1932. In 1933 the output again increased to 299,982,448 lb., while for 1934 it was estimated at 364,890,860 lb. This encouraging recovery in copper production not only reflects the stability of the copper-mining industry but emphasises the firmly entrenched position established by the Canadian metal in the copper-consuming countries of the world. Some Canadian copper producers, located principally in Manitoba, Ontario and Quebec, are fortunate in possessing ores containing sufficiently high values in precious metals to permit of operation in spite of the abnormally low copper prices prevailing almost continuously since 1930. However, the unfavourable copper market existing during recent years has not encouraged production and has curtailed the search for and development of new copper properties. In June of 1932 the United States instituted a duty of 4 cents per pound on foreign copper, which adversely affected Canadian copper production, more especially that of British Columbia. On the other hand, Canadian copper enjoys a preference in the United Kingdom and a large part of Canadian production now goes there.

**Quebec.** Until 1894, when Ontario took the lead, Quebec was the chief copper-producing province of Canada, the principal mines being the Eustis and Huntingdon properties in the Eastern Townships. There is still an annual production from this field. Recent developments in the Rouyn camp of northwestern Quebec have resulted in a greatly increased production of copper since 1927. These deposits are

associated with an easterly extension of formations similar to those of the Kirkland Lake area in Ontario. The first discoveries were located as gold prospects; the existence of large bodies of copper and zinc ores was subsequently proved and there is now a large production of copper as well as of gold. Since 1931 the Canadian Copper Refineries, Ltd., have treated blister copper in their electrolytic refinery located at Montreal East. This material comes from the Noranda smelter and the smelter at Flin Flon, Manitoba. Gold, silver, selenium and tellurium are also products of the Montreal refinery.

**Ontario.**—The Sudbury deposits were first noted in 1856 but did not attract attention until 1883-84, during the construction of the C.P.R., when a railway cutting was made through the small hill on which the Murray mine was afterwards located. During the first years the deposits were developed for their copper content alone; not until 1887 was the presence of nickel determined and the true value of the ores known. These nickel-copper ores of the Sudbury area are the source of nearly all the copper produced in Ontario. Under the International Nickel Co. of Canada, an amalgamation of the former International Nickel Co. and the Mond Nickel Co., an extensive program of expansion in the mining and metallurgical facilities of the district has been carried out. A subsidiary company, the Ontario Refining Co., Ltd., operates a copper refinery at Copper Cliff where electrolytically refined copper, precious metals, selenium and tellurium are produced from the blister copper smelted by the International Nickel Co., chiefly from ores from their own mines in the district. The company also operates the Acton precious metals refinery situated near London, England, where it recovers, in a refined state, the gold, silver and platinum metals contained in the concentrates produced at both the Swansea and Port Colborne nickel refineries. The Falconbridge Nickel Mines, operating a mine in Falconbridge township, make a copper-nickel matte which is shipped to Norway for refining. Adverse industrial conditions led to reductions in the copper production of Ontario in 1931 and 1932. There was, however, a remarkable recovery in production during 1933 and a continued expansion in 1934.

**Manitoba.**—During the four years 1917-20, when high prices prevailed for copper, ores containing 9,866,328 lb. of copper were shipped by the Mandy mine. Much development has been carried on in the Flin Flon district of Manitoba in the last ten years, and large bodies of ore have been proven on the Flin Flon property of the Hudson Bay Mining and Smelting Co. and the Sherritt-Gordon property. About 135 miles of branch line from the Hudson Bay Railway provide these properties with transportation facilities. A copper smelter and electrolytic zinc plant are operated by the Hudson Bay Mining and Smelting Co. at Flin Flon, while a large hydraulic development on the Churchill river provides the necessary power. Production from the plants of this company has been continuous since 1930.

∴ **British Columbia.**—Until 1930, British Columbia had been the leading copper producer among the provinces for many years, but it then gave first place to Ontario and since 1930 production has steadily declined, largely owing to the closing of the Copper Mountain mine and the curtailed operations at Britannia as a result of the low price of copper. The production of the province since 1930 has consisted of the blister copper produced at Anyox by the Granby Consolidated Mining, Smelting and Power Co., Ltd., and the copper estimated as recoverable from the ores, matte and concentrates exported. The principal copper-producing mines in British Columbia at present are the Britannia mine on Howe sound, and the Hidden Creek and Bonanza mines on Portland canal. The Hidden Creek and Bonanza ores are smelted at the Anyox smelter.

### 15.—Quantities of Copper Produced in Canada, by Provinces, with Total Values, calendar years 1911-34.

NOTE.—For the years 1886 to 1910, see Canada Year Book, 1916-17, p. 272.

<sup>1</sup>Preliminary figures.

**World Production of Copper.**—World production of copper was estimated at 1,120,000 short tons in 1933, as compared with 2,150,400 tons in 1929, the record year. Canada had an output of 149,992 tons in 1933, producing about 13.4 p.c. of the world estimated total and standing third among the nations.

<sup>1</sup>From the Imperial Institute except in the case of the production for Canada, where the official figures of the Dominion Bureau of Statistics are used.

#### Subsection 4.—Lead.

Lead is obtained in Canada largely from the deposits of British Columbia. From 88,665 lb. in 1891 the production advanced to over 39,000,000 lb. in 1897. Owing to the low price of silver in 1898 and labour troubles in the Slocan in 1899, the output in the latter year fell to 21,900,000 lb., but rose to 63,200,000 lb. in 1900. The output fell to 18,100,000 lb. in 1903, owing to the condition of the market affecting the production of the low-grade silver-lead ores of the East Kootenay district. An Act of October, 1903, provided for the payment of bounties on lead contained in lead-bearing ores mined in Canada and, as a direct result of the bounty, the output increased to 56,900,000 lb. in 1905 but fell off gradually to 23,800,000 lb. in 1911. A marked increase has since been experienced, a record total of 337,946,688 lb. being reached in 1928, while production in 1929 and 1930 continued at nearly the same level. Owing to the very low price to which the metal declined, production fell off to 255,947,378 lb. in 1932 and 266,475,191 lb. in 1933. The official estimate of production in 1934 was 342,811,000 lb., a new high record.

**British Columbia.**—In the East and West Kootenay districts there are many important mines, the principal of which is the Sullivan lead-zinc mine near Kimberley. The ore averages about 11 p.c. lead, 7 p.c. zinc and 5 ounces of silver to the ton. The successful solving by the Consolidated Mining and Smelting Co. of the metallurgical problems connected with the separation and reduction of these lead-zinc ores accounts to a considerable extent for the rapid growth in lead production during recent years. As a result of the low prices prevailing since 1930 for lead, zinc, and silver, many of the small silver-lead mines of the Slocan have remained idle, while the Monarch mine at Field re-opened in 1934 after having been closed down for some time.

**Other Provinces.**—Occurrences of lead have been found in Gaspé peninsula and in the Rouyn district of Quebec, but the only production of importance has come from the Notre-Dame-des-Anges district, Portneuf Co., where the Tetrault mine was a consistent producer of lead and zinc concentrates until 1930, when operations were suspended owing to the low prices of these metals. Lead mining in Ontario has been intimately associated with the successful operations of the Galetta mine and smelter, which closed down in the summer of 1931 owing to the low price of lead. Recent discoveries in the Sudbury Basin area have disclosed bodies of lead-zinc ore. These properties were under development but operations have been suspended and very little production has come from them as yet. An important production of lead came in recent years from the silver-lead ores of the Mayo district of Yukon. These operations are described under "silver" on pp. 401-402 of this chapter.

### 17.—Quantities and Values of Lead Produced from Canadian Ores, calendar years 1911-34.

NOTE.—For figures for the years 1887-1910, see 1929 Year Book, p. 367.

<sup>1</sup> Previous to 1913 the figures reported show the metal content of the shipments and are somewhat in excess of the actual amounts recovered. Since 1912 the data given represent the quantities of lead produced in Canada from domestic ores, together with the estimated lead recovery from lead ores and concentrates exported. <sup>2</sup>From 1911 to 1925, average prices at Montreal; from 1926 to 1934, average yearly prices at London, Eng. <sup>3</sup>Preliminary figures.

**World Production.**—The world production of lead in 1933 was about 1,310,400\* short tons. The principal producers were the United States with 20·9 p.c., Mexico 10·0 p.c., Australia 19·0 p.c., Canada 10·2 p.c., Germany 7·0 p.c. and Spain 4·9 p.c.

#### Subsection 5.—Nickel.

With the exception of the small amounts of nickel recovered from the ores of the Cobalt district, the Canadian production of nickel has been derived entirely from the well-known nickel-copper deposits of the Sudbury district, Ontario. A brief description of the history and development of the nickel-copper mining industry will be found under copper in Subsection 3 of this section. From 830,477 lb. in 1889, the production of nickel increased continually to a war-time peak of 92,507,293 lb. in 1918. After a slump to 19,293,060 lb. and 17,597,123 lb. in 1921 and 1922 respectively there was an increase to 73,857,114 lb. in 1925. In 1928 production at 96,755,578 lb. exceeded that of the war year 1918, while 1929 established a record at 110,275,912 lb. Production later declined to 30,327,968 lb. in 1932, but an output of 83,264,658 lb. in 1933 represents a remarkable recovery. Estimated production in 1934 was 130,346,400 lb., the highest on record.

In recent years the producing companies have instituted extensive researches to discover and encourage new peace-time uses for the metal. The success attending their efforts in that direction accounted very largely for the marked increase in production during the nineteen-twenties. The automobile industry, electrical machinery, cooking utensils, new submarine cables and various nickel alloys all helped to absorb this increased production. The world-wide depression seriously affected the demand for a commodity so dependent upon the world's industrial markets, while the increased nickel production of 1933 and 1934 reflects the recent improvement in industrial activity throughout the world.

\* From the Imperial Institute's Statistical Summary.

**Sudbury.**—The nickel-bearing rocks of the Sudbury district, with a width of about two and one-half miles, form a wide ellipse 36 miles long and 13 miles broad. The ore mined in the district contains nickel, copper and iron, but cobalt, gold, silver, selenium, tellurium, platinum and palladium are nearly always present in relatively small quantities. The proved deposits of nickel ore in Canada are estimated to be sufficient to provide for the world's requirements for many years, while there are still large reserves undeveloped.

**World Production.**—The world production of nickel was about 50,736 short tons in 1933, of which output about 82 p.c.\* was Canadian in origin, while the remainder was derived chiefly from New Caledonia.

# 18.—Quantities and Values<sup>1</sup> of Nickel Produced in Canada during the calendar years 1911-34.

NOTE.—For figures for the years 1889-1910, see 1929 Year Book, p. 368.

<sup>1</sup> A change in the method of computing the value of nickel production accounts for the drop in value after 1923. <sup>2</sup> Preliminary figures.

## Subsection 6.—Cobalt.

The major portion of the world supply of cobalt was for almost two decades derived from the silver-cobalt-nickel arsenides of the Cobalt district, the cobalt produced by refineries in southern Ontario having practically controlled world production until recent years. Large deposits of cobalt-bearing ores occur in central Africa, and the introduction into the world's markets of cobalt from this source has limited the market for the Canadian product to such an extent that since 1926 Canadian production has dropped to less than half of the world production. The ores occurring in recent discoveries at Great Bear lake, N.W.T., contain cobalt associated with pitchblende and silver.

The ore bodies at Cobalt, discovered in 1903, carry silver, cobalt, nickel, bismuth and arsenic. The Deloro smelter treats ores and residues and disposes of cobalt oxide, metallic cobalt and unseparated oxides of nickel and cobalt. The smelter output of cobalt, computed as the metallic cobalt and cobalt in oxides together with the cobalt recovered in ores exported from the mines and including cobalt in residues exported, amounted in 1933 to 466,702 lb. valued at \$597,752, as against 1,116,492 lb. valued at \$2,328,517 in 1925. Production in 1934 is estimated at 588,566 lb. valued at \$589,933.

\* From the Imperial Institute's Statistical Summary.

## Subsection 7.—Zinc.

The zinc-mining industry of Canada has recently made rapid strides, largely on account of the application of improved metallurgical methods in the treatment of the lead-zinc ores of British Columbia and the production of electrolytic zinc from the Flin Flon copper-zinc ores in Manitoba. The metallic recoveries from Canadian ores were 267,643,505 lb. in 1930, as compared with 5,600,000 lb. in 1913. Production in 1933 amounted to 199,131,984 lb. while the output in 1934 was estimated at 298,579,581 lb.

**British Columbia.**—The principal zinc-mining regions are situated in the Kootenay district of British Columbia, where there are large deposits of silver-lead-zinc ore. The chief producing mine is the Sullivan near Kimberley, where the ore worked is a replacement deposit of considerable size. Other mines are located in the Ainsworth and Slocan divisions of the West Kootenay district. Further information regarding lead-zinc mining and metallurgical operations is given under "lead" in Subsection 4 of this section.

**Other Provinces.**—There has been considerable exploration and development of zinc-bearing deposits during recent years in Eastern Canada, where these ores are often characterized by the close association of copper, zinc and gold. In north-western Manitoba the Flin Flon and Sherritt-Gordon mines have ores of this nature and refined zinc has been made at the Flin Flon smelter since the autumn of 1930. Some important deposits of zinc-bearing ore have been developed in the Rouyn district of Quebec. Zinc is associated with lead in the deposits at Galetta, Ontario, and at Notre-Dame-des-Anges, Quebec, and mines in both these districts have been producers of zinc concentrates, while the Errington mine in the Sudbury district developed a lead-zinc deposit and made some small shipments of zinc concentrates. Zinc concentrates have also been produced at the Sterling mine in Nova Scotia. However, all lead-zinc properties to the east of Manitoba have remained inactive since 1930.

<sup>1</sup> Estimated foreign smelter recoveries and refined zinc made in Canada.<sup>2</sup> Preliminary figures.

### Subsection 8.—Iron.\*

Iron ore is widely distributed in Canada and extensive deposits have been discovered from time to time. In Quebec there is a small annual production of titaniferous iron ore from a deposit near Baie St. Paul, but this material, which is principally exported, is used for its titanium content and not as a source of iron. There are millions of tons of iron magnetite sands, containing a high percentage of iron, along the north shore of the St. Lawrence in Saguenay Co., but these sands contain a high percentage of titanium, rendering the briquetted ore unfavourable for blast-furnace treatment, so that efforts to utilize them have not proved successful. There are also a number of deposits of bog iron ore in the St. Lawrence valley remarkably free from sulphur and phosphorus. These bog iron ores were successfully used in charcoal blast furnaces at Radnor Forges and Drummondville for many years. The known deposits of non-Bessemer iron ore in northern Ontario are very extensive. Millions of tons of red hæmatite were taken from the Helen mine in the Michipicoten district, while the Magpie mine in the same district produced siderite which was roasted before being shipped to the blast furnaces at Sault Ste. Marie. In British Columbia, some development work has been done on iron deposits on Kamloops lake and on Texada island, but no iron-mining or iron-smelting industry has become established in that province. Extensive deposits of hæmatite exist on the Belcher islands in Hudson bay, but the ore is rather low in grade and its comparative inaccessibility renders its development impracticable. Immense deposits of iron ores, large masses being high-grade, have been reported along the course of the Koksoak river, in northern Quebec, but these are so inaccessible that up to the present they have not even been systematically explored.

Hitherto there has been no great incentive to the development of the iron-mining industry in Canada, since there are easily accessible and abundant supplies in the higher-grade ores of Wabana, Newfoundland, and of the Mesabi range in Minnesota. The Wabana section of Newfoundland contains one of the largest deposits of iron ore in the world, the probable reserves in that area being estimated at 3,635,000,000 tons, and consisting of an exceptionally high-grade hæmatite.

In Ontario, where the iron and steel industry has reached its largest development in Canada, cheap and high-grade supplies of iron ore are readily available from the Mesabi range of Minnesota, while coal supplies are drawn from the nearby coal fields of Pennsylvania.

From Table 20 it will be observed that the tonnage of pig iron made in Canada in 1929 exceeded that of any previous year, while the 1929 quantities of steel ingots and castings made were exceeded only in the war years 1917 and 1918. Production has fallen off considerably since 1929 as a result of the reaction which set in during the latter part of that year. Ontario has been the leading producer of pig iron throughout the years recorded.

\* A sketch of the iron and steel industry of Canada was given on pp. 452-456 of the 1922-23 Year Book.

<sup>1</sup> Including a small production from Quebec in certain years.    <sup>2</sup> Owing to the fact that much of the pig iron produced in Canada is used by the firms producing it for further manufacture in their own plants, no attempt has been made since 1926 to place a nominal value on such production.    <sup>3</sup> Preliminary figures.

## Section 5.—Production of Non-Metallic Minerals.

### Subsection 1.—Fuels.

#### Coal.

The fuel situation in Canada is somewhat anomalous as, in spite of the enormous resources of coal in the country, about 50 p.c. of the consumption is imported. The Canadian coal areas are situated in the eastern and western provinces, while Ontario and Quebec are more easily and economically supplied with coal from the nearer coal fields of Pennsylvania and Ohio.\* The anomaly of the situation is accentuated if we consider that Canada's present coal consumption is about 35,000,000 tons annually, as against reserves of 1,234,289,000,000 metric tons, sufficient for an unthinkable long period at the present rate of consumption.

The Dominion Fuel Board, with the Deputy Minister of the Department of Mines as chairman, was constituted in 1922 to meet the need for a standing organization definitely responsible for the systematic study of the fuel position of the Dominion.

\* See map showing the sources of the coal supply of different parts of Canada, p. 386 of 1922-23 Year Book.

**Coal Resources.**—A summary of the known coal resources of Canada was given on pp. 391-394 of the 1922-23 Year Book; the accompanying table is reproduced as Table 21.

### 21.—Coal Resources of Canada, by Provinces and Classes of Coal.<sup>1</sup>

(In metric tons of 2,204 pounds.)

| Province or District.      | Including Seams of 1 foot or over at Depths to 4,000 feet.             |                                |                                              | Including Seams of 2 feet and over, at Depths between 4,000 and 6,000 feet. |                                              |

<sup>1</sup> See "Coal, Coke and By-Products", published by the Imperial Mineral Resources Bureau.

<sup>2</sup> The coal of all classes mined in Alberta to 1911, amounting to 20,000,000 tons, has been deducted.

<sup>3</sup> A=Anthracite, B=Bituminous, L=Lignite.

<sup>4</sup> Extensive investigation has been carried on by the Ontario authorities in connection with the Onakawana lignite deposits of the Moose River basin, James Bay region. No commercial production from this field has been reported up to 1935.

The coal production in 1933 amounted to 11,903,344 short tons, valued at \$35,923,962, or an average of \$3.02 per ton. This represented a decrease of 5,660,949 tons, or 32 p.c., as compared with 1928, the record year. Nova Scotia was again the leading producer. The coal produced in Nova Scotia, New Brunswick, British Columbia and Yukon is all classed as bituminous, while Alberta produces bituminous, sub-bituminous and lignite, and Saskatchewan and Manitoba lignite only. The division of the 1932 and 1933 production among these classes is given in Table 26. The quantity of coal mined annually in six provinces, and the Yukon Territory, and totals for Canada from 1911 to 1934 is shown in Table 22.

**22.—Production of Coal in Canada, by Provinces, calendar years 1911-34.**

NOTE.—For annual production from 1874 to 1910, by provinces, see 1911 Year Book, p. 419.

<sup>1</sup> Preliminary figures.

The imports of anthracite, bituminous and lignite coal for the calendar years from 1911 to 1933 are given in Table 23, and the exports of all coal from 1911 to 1933 in Table 24.

**23.—Imports into Canada of Anthracite, Bituminous and Lignite Coal for Home Consumption, calendar years 1911-33.**

NOTE.—Anthracite dust is included under anthracite coal. For previous years, see 1911 Year Book, p. 420.

**Coal Consumption.**—The sources of the coal consumed in Canada in the calendar years 1911-33 are shown in Table 25, detailed figures of coal *made available for consumption* during 1932 and 1933 are given in Table 26; the difference between the totals of the two tables in the same years is accounted for by the fact that coal received may be held in bond at Canadian ports and not "cleared for consumption" until required, while coal received in previous years may be taken out of bond (cleared for consumption) in a later year. Normally the coal made available for consumption is greater than the apparent domestic consumption, since coal is landed at Canadian ports and re-exported or ex-warehoused for ships' stores without being taken out of bond, but while remaining in bond at the port it is available for domestic consumption if required.

## 25.—Annual Consumption of Canadian and Imported Coal in Canada, by Quantities and Percentages, calendar years 1911-33.

NOTE.—For the years 1886 to 1910, see 1921 Year Book, p. 354.

<sup>1</sup> The sum of Canadian coal mines sales, colliery consumption, coal supplied to employees, and coal used in making coke, etc., less the tonnage of coal exported.

<sup>2</sup> Includes small tonnages from countries other than the United Kingdom and the United States. Deductions have been made to take account of foreign coal re-exported from Canada and bituminous coal ex-warehoused for ships' stores.

## 26.—Coal Output, Exports, Receipts from Other Countries and Coal Made Available for Consumption in Canada during 1932 and 1933.

(short tons).

NOTE.—For details by provinces, see the Bureau's annual report "Coal Statistics for Canada".

<sup>1</sup> Includes 52,189 tons from Germany, 700 tons from French East Indies and 650 tons from Belgium in 1932, and 144 tons of bituminous from Germany in 1933.

**World Production.**—The total known coal production of the world in 1933 amounted to about 1,140,000,000 long tons, towards which Canada contributed 10,611,000 long tons or about 0.9 p.c. Table 27 shows the production of the British Empire and the chief foreign countries in units of 1,000 long tons during each of the years 1913 and 1921-33.

## 27.—Coal Produced in the Principal Countries of the World, 1913, 1921-33.

(000 long tons.)

NOTE.—For corresponding figures for 1914 to 1926, see 1932 Year Book, p. 281. Figures in this table were taken from the Imperial Institute's Statistical Summary.

**Natural Gas and Petroleum.**

**Natural Gas.**—The production of natural gas increased in value from \$1,346,471 in 1910 to \$10,289,985 in 1930 but has since declined to a value of \$8,712,234 in 1933 and \$8,419,073 in 1934. The producing wells in the east are in southwestern Ontario, and near Moncton, N.B. The principal producing fields in Alberta are the Turner Valley (about 35 miles southwest of Calgary), Medicine Hat, Viking (about 80 miles southeast of Edmonton), Redcliff, Foremost (about 6 miles south and east of the town of Foremost), Bow Island and Wetaskiwin. Wainwright is supplied with gas from the Maple Leaf well in the Fabyan field. The quantity of gas sold or used in 1933 was 23,138,103 M cubic feet. Ontario was credited with about 52 p.c. of the total value but only 31 p.c. of the total quantity, while Alberta produced 45 p.c. by value and 66 p.c. of the total quantity. The production by provinces since 1920 is given in Table 28.

**28.—Quantities and Values of Natural Gas Produced in Canada, by Provinces, calendar years 1920-34.**

<sup>1</sup> Totals for Canada include small productions in Manitoba and Saskatchewan.

<sup>2</sup> Preliminary figures.

**Petroleum.**—The production of crude petroleum in Canada during 1931 was the greatest on record and amounted to 1,542,573 barrels. Output, however, declined to 1,044,412 barrels in 1932, rising again to 1,145,333 barrels in 1933. Production during 1934 was estimated as 1,417,368 barrels. The Turner Valley field in Alberta is the principal source of production in Canada. The wells in this field give a wet gas from which a very high grade of crude naphtha is separated. The Red Coudée field in southern Alberta, near the International Boundary, began to yield some petroleum in 1929, while a small production has been obtained for a number of years in the Wainwright field, about 120 miles east of Edmonton, where the oil is heavy and of a lower grade. Production from wells near Fort Norman on the lower Mackenzie river increased from 910 barrels in 1932 to 4,438 barrels in 1934. This oil was treated locally in a small refining plant and was used to a large extent in connection with mining operations in the Great Bear Lake area.

The principal Ontario oil fields are situated in the southwestern peninsula between lake Huron and lake Erie. These fields reached their maximum production in the '90's and have since declined. New Brunswick's small production comes from the Stony Creek field, near Moncton. For the production by provinces in 1932 and 1933 see Tables 5 and 5A of this chapter.

## 29.—Quantities and Values of Crude Petroleum Produced in Canada, calendar years 1911-34.

NOTE.—For figures for the years 1886-1910, inclusive, see p. 377 of the 1933 Year Book.

<sup>1</sup> The barrel = 35 Imp. gal.

<sup>2</sup> Preliminary figures.

### Subsection 2.—Other Non-Metallic Minerals.

**Asbestos.**—Canada produces more asbestos than any other country. The value of the annual output of asbestos increased from less than \$25,000 in 1880 to \$14,792,201 in 1920 and \$13,172,581 in 1929. Owing to trade depression, production has been curtailed since 1929 as will be seen in Table 30. However, in 1933 and 1934, production showed a distinct improvement over the immediately preceding years. The Imperial Institute has not given an estimate for the world total of asbestos production since 1931 owing to the lack of statistics for Russia, the world's second largest producer. In 1931 Russian production was estimated at 63,653 long tons and it has probably increased slightly since then. In 1933 Canada produced about 141,400 long tons, or more than half the world total, while other leading countries with their production in long tons were: Southern Rhodesia, 26,948; Union of South Africa, 15,185; United States, 4,237; and Cyprus, 3,494.

**Quebec.**—The Eastern Townships has for many years been the most productive asbestos-mining area in the world. The most important deposits are at Black lake, in Coleraine township; at Thetford and Robertsonville, in Thetford

township; at East Broughton, in Broughton township; and at Danville, in Shipton township. The veins of chrysotile asbestos traverse the serpentine in all directions, and as a rule the fibre lies at right angles to the walls of the veins. The veins vary in width from  $\frac{1}{4}$  inch to  $\frac{1}{2}$  inch and occasionally fibre has been obtained several inches in length. The fibre is of good quality and well adapted for spinning.

Both open-cut and underground methods of mining are employed throughout the Canadian asbestos fields. Nearly all the mining companies have installed machinery for the crushing, fibrizing, screening and grading of the mine product. In addition, 10 plants in Canada manufacture asbestos products, including the following commodities; asbestos paper and mill board; asbestos roofing of all kinds; asbestos rigid shingles; asbestos building materials; asbestos cellular and sponge-felted pipe insulation; insulating sheets and blocks; asbestos brake linings and clutch facings (woven on special looms); and asbestos packings for steam, oil and hydraulic operations.

### 30.—Quantities and Values of Asbestos Produced in Canada, calendar years 1911-34.

NOTE.—Figures for the years 1896-1910 are given in the 1911 Year Book, p. 424.

<sup>1</sup> The quantities and values of sand, gravel and rock separated as a by-product in milling asbestos are included in the totals for 1924 and previous years, but are excluded in later years. <sup>2</sup> Preliminary figures.

**Gypsum.**—Many large deposits of gypsum occur throughout Canada, but the production is chiefly from Hants, Inverness and Victoria counties, Nova Scotia; Hillsborough, New Brunswick; Paris, Ontario; Gypsumville and Amaranth, Manitoba; and Falkland and Mayook, British Columbia. The Hillsborough deposit of gypsum in New Brunswick is of very high grade. Nearly 50 p.c. of Canada's production is exported in crude forms from the Nova Scotia deposits, which are conveniently situated for ocean shipping and account for about 75 p.c. of the total Canadian production. Production of gypsum in Canada reached its highest point in 1928 with 1,246,368 tons valued at \$3,743,648. Production during 1933 was 382,736 tons valued at \$675,822 and preliminary figures for 1934 are 461,194 tons valued at \$864,204. The production by provinces during 1933 is shown in Table 5A, p. 386.

**Salt.**—The greater part of the Canadian salt production comes from wells located in southwestern Ontario, but the Malagash deposits in Nova Scotia show an increasing production in recent years and some shipments have been made from deposits near McMurray in Alberta. The first production of commercial importance in Manitoba was recorded in 1932 and for Saskatchewan in 1933.

The Canadian production during the present century has shown fairly steady growth from 59,428 tons in 1901 to 91,582 in 1911, 164,658 in 1921, 262,547 in 1926 and a high record of 330,264 tons in 1929. Production declined to 259,047 tons in 1931 but has since recovered to 280,115 tons valued at \$1,939,874 in 1933 (see Tables 2 and 5A of this chapter). The estimate for 1934 was 321,753 tons.

## Section 6.—Production of Clay Products and Other Structural Materials.

Production of these materials is naturally dependent upon the activity of the construction industry in Canada. Building and construction work fluctuates widely with business cycles and during the recent depression dropped to a very low ebb. Under these circumstances the production of clay products, cement, gravel and stone was severely curtailed. Some uncompleted large engineering construction operations and governmental relief projects eased the decline in the early years of the depression but the downward trend was evident into 1933. It is encouraging to observe, however, that with a moderate recovery of construction activities in 1934 there was an increase in the estimated production of the chief structural materials, the total estimated value of production being \$19,233,092 as compared with \$16,696,687 in 1933.

**Brick and Tile.**—Although the brick and tile industry is established in every province of the Dominion, production is naturally greatest near the chief centres of population, that is, in Ontario and Quebec. Here the widespread clays of glacial and post-glacial age occurring over considerable areas of the St. Lawrence Lowlands have furnished the materials for numerous brick and tile industries. Production fluctuates with building activity and reached its highest point in the year 1912. Since that time the gradual substitution of steel and reinforced concrete for brick has reduced the production of brick so that, while the value of construction undertaken in 1928 or 1929 is estimated to have exceeded that of 1912, the quantity of brick produced in the later years was only about half that of 1912. On the other hand, as will be seen from Table 31, the production and consumption of cement in 1929 greatly exceeded that of 1912 or 1913. The production of building brick of various types in 1932 and 1933 is shown in Table 2 of this chapter, while the production by provinces in 1932 and 1933 is given in Tables 5 and 5A. Estimated production in 1934 is given in Table 2A.

**Cement.**—The cement industry in Canada began with the manufacture of hydraulic or natural rock cement. The first production was probably at Hull, Quebec, between 1830 and 1840. The manufacture of Portland cement began about 1889. Owing to its superiority in uniformity and strength, it soon superseded the older product. Portland cement consists of an accurately proportioned mixture of lime, silica and alumina. The lime is usually furnished by limestone or marl, and the silica and alumina by clay or shale. The cement industry has naturally become established where these materials are situated and where fuel supplies and transportation are readily available. The largest production is in Quebec and Ontario, although there are also active plants in Manitoba, Alberta and British Columbia. As may be seen from Table 31, production declined greatly from 1929 to 1933, but recovered somewhat in 1934. Production by provinces in 1932 and 1933 is given in Tables 5 and 5A of this chapter. Whereas in pre-war years Canada was an importer of Portland cement she is now on balance an exporter of this commodity.

**31.—Production, Imports, Exports and Apparent Consumption of Portland Cement, by Quantities and Values, calendar years 1910-34.**

| 1934 <sup>4</sup> ..... | 3,783,226                | 5,667,946  | 14,341            | 45,548    | 70,046                | 55,181    | 3,727,521             | 5,658,313  |

<sup>1</sup>The barrel of cement = 350 lb. or 3½ cwt. <sup>2</sup>"Production" as used here means quantity and value of sales. <sup>3</sup>Quantities of exports were insignificant prior to 1919. <sup>4</sup>Preliminary figures.

**Stone, Sand and Gravel.**—While the Mineral Branch of the Dominion Bureau of Statistics presents details of the production and industrial organization of the stone industry separately from that of sand and gravel, for the sake of brevity they are here discussed together. Production of these materials increased greatly up to the recent world depression. The expansion in the stone industry was chiefly in crushed stone. Thus a production of crushed stone in 1922 of 3,044,399 tons had increased in 1930 to 8,062,330 tons, while in the same period the production of sand and gravel increased from 11,666,374 tons to 28,547,511 tons. During the depression the output contracted sharply as shown by the figures in Table 32. Estimates for 1934 indicate some recovery to 3,661,800 tons for total stone and 13,521,257 tons for sand and gravel. Among the developments in Canada which have resulted in the increased production of these materials prior to the depression may be mentioned: (1) the tendency for brick to be replaced by reinforced concrete, cement blocks, etc., as indicated on p. 420 by a decline in brick production and an increase in that of cement; (2) the vast improvement during the past decade in the mileage and character of roads and highways in Canada; and (3) the improvement of railway road-beds.

The provincial distribution of the 1932 and 1933 production of stone, sand and gravel is shown in Tables 5 and 5A, while the chief purposes for which these materials were produced are shown in Table 32.

**32.—Production of Sand, Gravel and Stone in Canada, Showing the Principal Purposes, calendar years 1931-33.**

| <b>Totals, Stone<sup>1</sup>.....</b>                       | <b>8,397,860</b>  | <b>11,070,184</b> | <b>4,690,922</b>  | <b>4,938,461</b> | <b>2,939,574</b>  | <b>2,996,576</b> |

<sup>1</sup>Totals include minor items not specified.

The quantities and values of stone produced, given in the table above, represent only the production of those establishments which actually quarry their own stone and are exclusive of the products of the stone-dressing industry comprising those establishments which buy rough stone and dress, polish or finish it; although, dressing operations are frequently carried on right at the quarry and to that extent cannot be separated from the primary production. Of the total stone produced in 1933 over 87 p.c. was limestone, 9 p.c. granite, 3 p.c. sandstone and less than 0.4 p.c. marble. The average value per ton was \$0.83 for limestone, \$2.65 for granite, \$1.09 for sandstone and \$6.05 for marble. The marble was used chiefly for stucco dash, in pulp and paper mills and as dressed building stone. Of the other three kinds of stone by far the largest part was used as crushed stone.

## CHAPTER XIII.—WATER POWERS.

The fresh-water area of Canada is officially estimated at 228,070 square miles—an area nearly twice as large as the whole land area of the British Isles, and certainly larger than the fresh-water area of any other country in the world. As many parts of this well-watered country are situated at a considerable height above sea-level, there are great sources of potential energy in the rapids and waterfalls of the rivers conveying the water from these areas to the sea. Water power, therefore, is among the chief natural resources of Canada, and its development has in recent years contributed materially to swell the volume of Canadian production.

This Water Power chapter of the Year Book is divided into three sections: the first describes our water powers, their development and use in industry; the second deals with the Canadian central electric station industry, which is based almost wholly upon hydro-electric power; the third treats of the public ownership of hydro-electric power in Ontario, the chief manufacturing area, and also describes the policies of the Hydro-Electric or Power Commissions in other provinces.

### Section 1.—The Water Powers of Canada.\*

The progress of civilization in its material aspects may be measured by the extent to which the resources of nature are adapted to the uses of mankind. These resources yield, in the first instance, raw materials such as coal and iron, cotton and lumber, hides and wool, which enter into so many things that they are spoken of as basic commodities. Energy, until comparatively recently, was largely secured by the combustion of coal and was therefore looked upon as a secondary product, whereas, when produced from falling water, it is just as much a primary product as coal itself. Energy now enters so largely into the scheme of modern existence that it is recognized as a basic commodity. Statistics concern themselves with kilowatt hours of electrical energy produced just as with the production of pig iron, coal or cotton, and take note of undeveloped water power as being a source of raw material just as important as uncut forests or untapped oil fields. The relationship of power to production is of such vital consequence that every nation, besides considering its own power-producing resources, is deeply interested in the similar resources of other countries and the method of their development. To facilitate a study of world power conditions two Plenary World Power Conferences composed of representatives from 47 member states have already been held to consider the technical, economic and statistical aspects of power development. Arrangements for the future re-convening of such conferences have been made.

Canada is richly endowed with water-power resources and is in the forefront as regards their utilization. In fact, practically every large industrial centre throughout the Dominion is now served with hydro-electric energy and has within practical transmission distance substantial reserves for the future. More than 95 p.c. of the total main plant equipment of the central electric stations of Canada is hydro-power, and this equipment generates more than 98 p.c. of the total electrical output. Indeed, water power is a mainspring of industrial progress in the central provinces, which have no indigenous coal supplies. Table 1 shows the provincial distribution of available and developed power in Canada at Jan. 1, 1935.

| Yukon and Northwest Territories..... | 294,000                                              | 731,000                               | 13,199                   |
| <b>Canada.....</b>                   | <b>20,347,400</b>                                    | <b>33,617,200</b>                     | <b>7,547,035</b>         |

The figures of available power in the above table are based upon rapids, falls and power sites of which the actual existent drop, or the head of possible concentration, is definitely known or at least well established. Innumerable rapids and falls of greater or smaller power capacity, not as yet recorded, are scattered on rivers and streams from coast to coast and will only become available for tabulation as more detailed survey work is undertaken and completed. This is particularly true of the less explored northern districts. Nor is any consideration given to the power concentrations which are feasible on rivers and streams of gradual gradient, where economic heads may be created by the construction of power dams, excepting only at points where definite studies have been carried out and the results made matters of record.

The turbine installation in the above table represents the actual water wheels installed throughout the Dominion, but these figures should not be placed in direct comparison with the available power figures for the purpose of deducing therefrom the percentage of the available water-power resources developed to date. The actual water-wheel installation throughout the Dominion averages 30 p.c. greater than corresponding maximum available power figures calculated at ordinary six months flow. The figures quoted above, therefore, indicate that the "at present recorded water-power resources" of the Dominion will permit of a turbine installation of about 43,700,000 h.p. In other words, the present turbine installation represents only about 17 p.c. of the present recorded water-power resources.

The above figures may be said to represent the minimum water-power possibilities of the Dominion. To illustrate, detailed analyses of the water-power resources of the provinces of New Brunswick and Nova Scotia have disclosed advantageous reservoir facilities for regulating stream flow. It is estimated that the two provinces possess within their respective borders 200,000 and 300,000 commercial horse power.

**Growth of Water-Power Development.**—The commencement of the long distance transmission of electricity at the beginning of the present century resulted in the extensive development of hydro-electricity for distribution over wide areas. The growth of installation during the period from 1900 to 1934 is shown, by provinces, in Table 2.

## 2.—Hydraulic Turbine Horse Power Installed in Canada, by Provinces, as at Dec. 31, 1900-34.

NOTE.—Turbine horse power in Yukon was 5 from 1900 to 1906, 2,085 in 1907, 2,095 in 1908, 3,195 in 1909 and 1910, 13,195 from 1911 to 1913, and 13,199 from 1914 to 1934. These figures are included in the totals for Canada.

**Distribution of Developed Water Power.**—An analysis is made in Table 3 of the distribution of developed water power among central electric stations, pulp and paper-mills and other industries. The extent to which pulp and paper manufacturing is dependent on water power is clearly shown by the figures of Table 3, which indicate that 8.2 p.c. of the developed power is installed by pulp and paper companies, in comparison with 4.8 p.c. developed by all other industries (excluding central electric stations). The pulp and paper industry also purchases a large amount of power from the central electric stations, and about 90 p.c. of its machinery is driven by water power. The bulk of the water power used in other industries is developed by central electric stations, converted into electricity and delivered to the various industrial plants.

### 3.—Developed Water Power in Canada: Distribution, by Provinces and Industries, and per 1,000 Population, as at Jan. 1, 1935.

NOTE.—The figures in this table are preliminary and are subject to correction when official data are complete.

| Province.                            | Turbine Installation in H.P.               |                                       |                                   |                  | Population, June 1, 1934. <sup>4</sup> | Total Installation per 1,000 Population. |

<sup>1</sup> Includes only hydro-electric stations which develop power for sale. <sup>2</sup> Includes only water power actually developed by pulp and paper companies. In addition to this turbine installation, pulp and paper companies have motor equipment for operation by hydro-electricity purchased from the central electric stations aggregating more than 1,031,000 h.p., making a total of more than 1,636,000 h.p. actually developed for the manufacture of pulp and paper. Large amounts of electricity are also purchased for use in electric boilers. <sup>3</sup> Includes only water power actually developed in connection with industries other than the central electric station and pulp and paper industries. These industries also purchase power from the central electric stations. <sup>4</sup> Estimated by the Dominion Bureau of Statistics.

## Section 2.—Central Electric Stations.\*

The rapid growth of the central electric station industry has been stimulated by the large demand for power from the manufacturing industries, particularly pulp and paper plants, and from the domestic and commercial light customers, and also by the many improvements in generating and transmitting equipment and in electric appliances and motors. In Table 4 will be found statistics of the number of central electric stations, capital invested, revenue from sale of power, total horsepower, kilowatt hours generated and number of customers for the 17 years ended 1933, together with the number of persons employed and the amount expended for salaries and wages. The total output for 1933 amounted to 17,338,990,000 kilowatt hours and, based on preliminary figures from the large stations, the total production in 1934 is estimated at 21,167,682,000 kilowatt hours. This is a new high record for the industry, exceeding the previous peak of 18,093,802,000 kilowatt hours made in 1930 by over 16 p.c.

Exports to the United States, which reached a low point in 1932, began to pick up in June, 1933, and continued well above 1931 and 1932 exports throughout 1934, amounting to 1,138,297,000 kilowatt hours for the first eleven months, as against 626,278,000 kilowatt hours for the corresponding period in 1932.

Pulp and paper mills, textile mills and other industries have been using increasing quantities of electricity in electric boilers and for the first eleven months of 1934 purchased 4,560,000,000 kilowatt hours for this purpose. This was an increase of 79 p.c. over the 1932 deliveries and 42 p.c. over the 1933 deliveries. The improved conditions in the pulp and paper industry, together with increases in power consumption in electro-chemical and electro-metallurgical industries and a more or less

\* Revised by G. S. Wrong, B.Sc., Chief, Transportation and Public Utilities Branch, Dominion Bureau of Statistics. For a list of publications of this Branch see Chapter XXIX.

steady increase in the domestic load, or consumption for residence lighting, and other uses, even during the worst years of the depression, have all combined to raise the central electric station output to this record figure.

There are some interesting factors affecting the relative per capita consumptions of electricity from central electric stations in Canada and the United States. An abundant supply of low-priced coal in the industrial area of the United States, and no coal but an excellent supply of water power in the central provinces of Canada, tend to favour the generation of power in central stations in Canada more than in the United States. Again, the pulp and paper industry is proportionately a smaller industry in the United States than in Canada; on a power basis, the proportions are approximately 7 p.c. and 40 p.c. respectively. While the average consumption for domestic use is more than twice as high in Canada as in the United States, the total consumption for domestic or residential use is about 9.5 p.c. of the total output of central electric stations for Canada and 14 p.c. for the United States.

#### 4.—Summary Statistics of Central Electric Stations, calendar years 1917-33.

<sup>1</sup> Excluding non-generating stations in 1920 and subsequent years. <sup>2</sup> Revised to exclude duplications.

<sup>3</sup> Not including auxiliary plant equipment which is included in installation shown in central electric stations in Table 7 of the manufactures chapter, pp. 466 and 467.

**Equipment of Central Electric Stations.**—The main-plant primary power equipment of all central electric stations aggregated 6,616,006 h.p. in 1933. This included water wheels and turbines, steam reciprocating engines and turbines, and internal combustion engines. The hydraulic power machines greatly predominated over the other prime movers, providing 95 p.c. of the total capacity, with steam turbines, steam reciprocating engines and internal combustion engines making up the remaining 5 p.c. Not included in the above were steam engines and internal combustion engines with a capacity of 193,569 h.p., or 2.8 p.c. of the total power capacity, installed as auxiliary or standby equipment.

Central electric stations that have no water power, but are operated by steam and internal combustion engines, are on the whole small stations. Of the 57 main-plant steam reciprocating engines in central electric stations in 1933, only 8 in number, or about 14 p.c., were over 500 h.p. The steam turbines averaged approximately 4,100 h.p. with 15 units averaging 9,600 h.p., but there were only 66 steam turbines in the industry and these were confined to 25 stations, whereas the 814 water wheels and turbines averaged 7,747 h.p., including 3 at 65,000 h.p. and 2 at 66,000 h.p. each.

The majority of the fuel-using stations are primarily for lighting purposes, using the cheapest fuel procurable, generally local coal. In the Prairie Provinces bituminous and lignite coals are used for the steam engines, and gasolene, oil distillates and producer gas for the internal combustion engines.

Of the 334 main-plant internal combustion engines in central electric stations in 1933, 186, or 56 p.c., were in Saskatchewan, 66, or 20 p.c., in Alberta and 30, or 9 p.c., in Manitoba.

During 1933, the fuel stations produced 330,933,000 kilowatt hours at a cost for fuel of \$1,783,301, an average of 0.54 cts. per kilowatt hour. This production was, however, only 1.8 p.c. of the total output. The auxiliary equipment in central stations consumed fuel valued at \$88,127 and produced 1,677,000 k.w. hours of energy.

#### 5.—Main Plant Equipment of Central Electric Stations, by Provinces and Total Auxiliary Equipment, 1933.

NOTE.—K.V.A. means Kilo-volt-amperes.

**Provincial Distribution of Electrical Energy.**—The distribution by provinces of the electrical energy generated in central electric stations throughout Canada is shown in Table 6 for the calendar years 1928-1933. In the latter year about 80 p.c. of the total generated electrical energy was produced in the leading industrial provinces of Ontario and Quebec. From Table 7 it is seen that the total electric energy generated for export in the fiscal year ended Mar. 31, 1934, was 1,199,027,447 kilowatt hours; in the calendar year 1933 it had amounted to 1,010,420,181 kilowatt hours, or 5.8 p.c. of the total amount generated in central electric stations.

**Electric Light and Power.**—Electric light and power companies are subject to registration and inspection under the Electricity Inspection Act, 1907 (6-7 Edw. VII, c. 14), and the production of electrical energy for export is regulated by the Electricity and Fluid Exportation Act, 1907 (6-7 Edw. VII, c. 16). Both Acts were administered by the Department of Inland Revenue until Sept. 1, 1918, when, by Order in Council of June 3, 1918, their administration was transferred to the Department of Trade and Commerce. (See cc. 54 and 55, R.S.C., 1927.)

Electrical energy produced for export increased from 538,331,425 kilowatt hours in the fiscal year ended Mar. 31, 1911, to 1,749,539,778 kilowatt hours in 1931 but fell to 652,152,826 kilowatt hours in 1933. Such power produced in 1934 showed an increase of nearly 84 p.c. compared with 1933 and was only 31.5 p.c. below the 1931 figure. Figures by companies for the last four fiscal years are given in Table 7.

### Section 3.—Public Ownership of Hydro-Electric Power.

When, in the early years of the twentieth century, it became evident that the development of hydro-electric power would become a 'key industry' in Canada, more especially in its coal-less central provinces of Ontario and Quebec, a strong movement arose in favour of conserving the water powers of the country for the public benefit instead of allowing them to pass into the hands of private corporations. This 'public ownership' movement developed especial strength in Ontario and finally led to the establishment of the Hydro-Electric Power Commission, the operating statistics of which are given in Subsection 1. More recently, Manitoba, Nova Scotia, New Brunswick and Saskatchewan have established Hydro-Electric Commissions on the model of the Ontario system. In Quebec and British Columbia, on the other hand, the development of hydro-electric power has been left in the hands of private corporations.

#### Subsection 1.—The Hydro-Electric Power Commission of Ontario.\*

The publicly-owned hydro-electrical undertaking of Ontario—known in the province as the "Hydro"—is an organization of a large number of partner municipalities, co-ordinated into groups or systems for securing common action with respect to power supplies. It had its beginning in 1903, when, as a result of public agitation to ensure the provision of adequate supplies of electrical power for distribution throughout the province at low cost, seven municipalities united under statutory authority in appointing an investigating commission to deal with power problems. This commission, known as the Ontario Power Commission, completed its work in 1906, and in the same year the Ontario Government, by special Act, created the present Hydro-Electric Power Commission of Ontario. The operations of the undertaking have grown rapidly and in 1933 electrical service was supplied by the Commission to about 757 municipalities, comprising nearly all of the cities and towns of the province, as well as many small communities and rural areas.

The providing of the power, either by generation or purchase, its transformation, transmission and delivery to the individual municipalities and to large industrial consumers, and the operation of rural power districts are carried on by the municipalities acting *collectively* through their agent and trustee, the Hydro-Electric Power Commission of Ontario. The local operations involved in the retail distribution of the electrical energy to the consumers within the limits of the various urban municipalities are performed by the municipalities *individually* through municipal utility commissions acting under the general supervision of the Hydro-Electric Power Commission.

Capital required for plant to generate and transmit power is lent by the province, and the municipalities are under contract to repay, over a period of 40 years, the moneys thus lent, with interest in full. The local distribution systems are financed individually by the issue of municipal debentures. Provision is made, in the rates charged to the ultimate consumers, for revenue with which to retire these bonds in from 20 to 30 years. The rates at which power is supplied by the Commission to the various municipalities vary with the amounts of power used, the distances from the sources of supply, and other factors. The basic principle underlying the operations of the undertaking is the provision of service 'at cost'. The rates charged by the municipal utilities for retail service are under the control of the Commission and are designed to ensure that each class of consumer bears its appropriate share

\* Revised by R. T. Jeffery, Chief Municipal Engineer, Hydro-Electric Power Commission of Ontario, Toronto, Ontario.

of the expenses of the undertaking. Each type of consumer is charged with the cost of the service received as far as is practicable.

**Power Supplies.**—To meet the constantly expanding power demands of the undertaking, the Commission has constructed its own generating plants, and has acquired several privately-owned generating plants. Of the 39 hydro-electric power plants operated by the Commission in 1932, the largest is the Queenston-Chippawa development on the Niagara river which was constructed by the Commission and has a normal operating capacity of 500,000 h.p. Provision for the needs of the near future had been made at the end of 1932—including existing plants, plants under construction and power under contract for present and future delivery—up to an aggregate of about 2,000,000 h.p.

**Hydro-Electric Power Commission Statistics.**—The Canada Year Book of 1910 (p. xliii) described the turning on, Oct. 11, 1910, at Berlin (now Kitchener), Ontario, of electrical energy generated by Niagara falls. The small initial load of less than 1,000 h.p. increased rapidly and by 1915 had reached 100,000 h.p. In 1920 the total power distributed exceeded 350,000 h.p. and in 1930 it was over 1,260,000 h.p. Table 8 shows the growth of the co-operative municipal electrical undertaking of Ontario. It will be noted that the total capital of the undertaking, which includes investments of the Hydro-Electric Power Commission in power-producing and transmitting equipment, etc., and investments of the municipalities in distributing systems and other assets, aggregated nearly \$395,000,000 in 1933.

**8.—Summary Statistics Representative of the Growth of the Ontario Hydro-Electric Power Commission's Undertaking, 1910-33.**

| Year.     | Municipalities Served. | Customers Served. | Total Power Distributed by Commission. | Capital of Commission and Assets of Municipal Utilities. |

<sup>1</sup> Included in Eastern Ontario system.

<sup>2</sup> Included in Northern Ontario system.

<sup>3</sup> Includes Manitoulin rural power district.

**Statistics of Urban Municipal Electric Utilities of Ontario Supplied by the Commission.**—The Commission exercises supervisory functions over the electrical utilities owned and operated by the partner municipalities, and has introduced a uniform accounting system which enables the Commission to present in its Annual Reports consolidated balance sheets and operating reports regarding these utilities. These statistics relate to about 90 p.c. of the retail customers supplied by the undertaking. Summary statistics regarding service to rural consumers are given in Table 14.

Statistics of the assets and liabilities of the electric departments of urban municipalities served by the Hydro-Electric Power Commission are given in Table 12. These show, for 1933, total assets of \$135,703,253, as compared with liabilities of \$49,920,754. Of the difference, \$44,169,720 is allotted as reserves, leaving a surplus of \$41,612,779. The item "equities in hydro systems", listed under both assets and reserves, relates to the sinking fund equities acquired by the individual municipalities in their collective generation and transmission undertaking administered by the Hydro-Electric Power Commission. All other items relate to the local distributing systems operated individually by the urban municipalities which are partners in the Hydro undertaking. In computing the percentage of net debt to total assets the equity in Hydro systems is not taken into account. It will be noted that whereas between 1929 and 1933 total assets have increased by \$28,794,107, total liabilities have increased by only \$1,825,046.

**12.—Consolidated Statement of Assets, Liabilities, Reserves and Surpluses of Electric Departments of Urban Municipalities Served by the Ontario Hydro-Electric Power Commission, calendar years 1929-33.**

In Table 13 will be found details of the earnings and expenses of the electrical distributing systems of the urban municipalities served by the Hydro-Electric Power Commission, for the five years from 1929 to 1933. The first item of expense—power purchased—is the municipalities' share of the Commission's costs for generation, purchase, and transmission of the power in bulk; all other expenses and earnings relate to local distribution within the municipalities. A very rapid growth will be noted.

**13.—Statement of Earnings and Expenses of Electric Departments of Urban Municipalities Served by the Ontario Hydro-Electric Power Commission, calendar years 1929-33.**

**Rural Electrical Service in Ontario.**—During the past few years substantial progress has been made in Ontario in the field of rural electrification and the Commission's rural operations are now an important feature of its work. Towards this rural work the Ontario Government, pursuant to its policy of promoting the basic industry of agriculture, contributes, in the form of "grants-in-aid", 50 p.c. of the initial capital cost of distribution lines and equipment. In 1930 the Ontario legislature passed two additional Acts relating to rural service. The Rural Power District Loans Act, 1930, provides for advances up to \$1,000 to actual owners of lands and premises in rural power districts, for the installation of electrical wiring and the purchase of equipment. The Rural Power District Service Charge Act, 1930, provides for the fixing of low maximum service charges for all classes of rural service. In Table 14 will be found statistics relating to rural electrical distribution systems operated by the Hydro-Electric Power Commission. A rapid rate of increase is obvious from these statistics.

#### 11.—Statistics Relating to Electrical Service in Rural Power Districts Operated by the Ontario Hydro-Electric Power Commission, years ended Oct. 31, 1929-33.

NOTE.—*Re Rural Power District Legislation*, consult the following Provincial Government publications: *The Power Commission Act* (R.S.O., 1927, c. 57); *The Rural Hydro-Electric Distribution Act* (R.S.O., 1927, c. 59); *The Rural Power District Loans Act*, 1930 (20 Geo. V, c. 14), and *The Rural District Service Charge Act*, 1930 (20 Geo. V, c. 15).

#### Subsection 2.—Hydro-Electric and Power Commissions in Other Provinces.

**Quebec.**—The Quebec Streams Commission, originally created by 1 Geo. V, c. 5, and given additional powers by 3 Geo. V, c. 6 (see R.S.Q., 1925, c. 46) and by 20 Geo. V, c. 34, is authorized to ascertain the water resources of the province, to make recommendations regarding their control, and to construct certain storage dams and operate them so as to regulate the flow of streams. The Commission has not undertaken the direct production of electric power, but has assisted companies engaged in such work by a systematic collection of data on the flow of the principal rivers and on the meteorological conditions, by investigation of numerous water-power sites and determination of the longitudinal profile of a large number of rivers, but mostly by the regulation of the flow of the principal power streams, thereby increasing very materially the amount of power available. This regulation is obtained by constructing storage dams holding water in large reservoirs during flood periods and using it to increase the flow at low-water periods.

The Commission has built storage reservoirs on the St. Maurice river, where the low-water flow has been increased from 6,000 second-feet to 18,000 second-feet, on lake Kenogami, the St. Francis, the Métis, the Ste. Anne de Beaupré and the North rivers. The entire cost to the Commission of these storage works has been about \$9,000,000 and the annual revenue exceeds \$750,000.

Other reservoirs which are the property of the Commission and are operated by that body have been built and paid for by the benefiting companies instead of being financed by the Commission, namely:—

In the Gatineau River watershed two large storage reservoirs, Baskatong and Cabonga, were completed in 1927 and 1929, with a combined capacity of 140 billions of cubic feet, making it possible to increase the flow of the Gatineau river from 3,000 second-feet to 10,000 second-feet. This work was paid for by the Gatineau Power Co.

On the Lièvre river, a storage reservoir of 18 billions of cubic feet was completed in 1930 at Cedars Rapids, one mile and a half above Notre-Dame-du-Laus and will be operated to maintain a regulated flow of 3,500 second-feet at High Falls. The cost of this dam was paid by the James MacLaren Co., of Buckingham.

On Mattawin river, St. Maurice District, a storage reservoir of 33 billions of cubic feet was built in 1930 at Taureau rapid, 80 miles from the mouth of the river, with a view to a better and more complete regulation of the flow of the St. Maurice river. This work was paid for by the Shawinigan Water and Power Co.

**Nova Scotia.**—The Nova Scotia Power Commission was created in 1919 with powers similar to those of the Ontario Commission. It is authorized to "generate, accumulate, transmit, distribute, supply and utilize electric energy and power in any part of the province of Nova Scotia, and do everything incidental thereto or deemed by the Commission necessary or expedient therefor". Its main operations, however, are undertaken with the approval of the Lieutenant-Governor in Council.

The Commission has already constructed several important hydro-electric developments and is now operating the following systems: *St. Margaret's Bay*—sells power by wholesale in Halifax and vicinity; *Mushamush*—sells power by wholesale and retail in Lunenburg Co.; *Sheet Harbour*—sells power by wholesale in Pictou Co., supplies demands of a groundwood pulp-mill at Sheet Harbour, retails in Sheet Harbour and in Musquodoboit and Stewiacke valleys and serves the town of Truro through the Pictou County Power Board; *Mersey System*—supplies demands of pulp and paper-mill at Brooklyn, Queens Co.; *Markland System*—supplies town of Liverpool, Caledonia valley and places in vicinity, including woodworking factory and that of a gold mine; *Tusket System*—sells power by wholesale in Yarmouth, also supplies demands of Cosmos Imperial Mills, Ltd., at Yarmouth; *Roseway System*—sells power wholesale in Shelburne and wholesale and retail in the town of Lockeport and vicinity; *Antigonish System*—supplies Antigonish town, and other communities in Antigonish Co.

The total installed capacity at Sept. 30, 1933 was 62,955 h.p., and there were about 257 miles of main transmission lines and 161 miles of secondary transmission and distribution lines. The total capital expenditure to Sept. 30, 1933, was \$13,902,-334 and the reserves were \$1,391,775.

**New Brunswick.**—The New Brunswick Electric Power Commission, incorporated under provincial legislation, carries on the generation and distribution of electrical power in southern New Brunswick. It operates an 11,000 h.p. hydro-electric plant at Musquash, twelve miles west of Saint John, and a 7,500 h.p. steam plant at Grand Lake, in the Minto coal area; 66,000-volt lines connect the two plants with each other and with the cities of Saint John and Moncton. A 33,000-volt line delivers power from the Grand Lake plant to Fredericton and Marysville.

Power is sold *en bloc* to the cities of Saint John, Moncton and Fredericton and to the town of Sussex, supplying 17,400 customers in these communities. Power is also distributed directly by the Commission to villages and rural districts, serving directly 5,250 customers. 235 miles of high voltage lines and 695 miles of distributing lines are in operation.

The Commission has under construction a 66,000-volt line from the Grand Lake plant to the Miramichi and is taking over the distribution services of the towns of Chatham and Newcastle on Dec. 31, 1934.

The Commission has a plant investment of \$6,285,000, and an annual revenue of \$800,000.

**Manitoba.**—The formation of the Manitoba Power Commission was authorized by the passage of the Electrical Power Transmission Act of 1919 (c. 30, also c. 61, Consolidated Amendments, 1924) which authorizes the Commission to make provi-

sion for generating electrical energy, to enter into contracts for the purchase of power in bulk from generating agencies, and for its transmission and sale to municipalities, corporations and individuals. In 1929 legislation was passed whereby the Government undertook to pay interest charges and sinking fund charges on an amount not exceeding 50 p.c. of the capital cost of the construction and erection of equipment required for the generation and transmission of electrical power or energy to municipalities, farms and other customers.

The Commission has built and is now operating an extensive transmission system under authority of the above Act, supplying electrical power to many thousands of customers throughout Manitoba. This power is purchased under the Seven Sisters power contract from the Northwestern Power Co. and transmitted over high tension steel-tower lines to Portage la Prairie, Brandon and Morden. From this main system power is transmitted to the territory south of the Winnipeg-Brandon main line as far as the International Boundary.

A branch system serving the territory along the western boundary of the province, including the towns and villages of Reston, Pipestone, Melita, Napinka, Elkhorn, Miniota, Crandall and Arrow River, has been constructed and is operated by the Commission. This system which, until August 1931, was supplied with power generated by the Commission's plant at Virden, is now tied into the main system and supplied with power generated at Seven Sisters.

Under the authority granted by the Electrical Power Transmission Act of 1919, the Commission has made purchases of municipally-owned plants—notably at Birtle and Brandon—or entered into contracts for the supply of power by municipally-owned plants—as at Dauphin—or by the Winnipeg Electric Co., whereby power is supplied to outlying districts. This phase of the Commission's activities has shown steady growth.

The Commission owns and operates the central steam-heating system at Brandon, supplying heat to the business and part of the residential section of the city. The Commission also owns and operates the gas plant supplying gas to commercial and residential customers. It is the intention of the Commission to supply all outlying power areas from the main system just as soon as their loads are sufficient to justify the cost of building extensions.

**Saskatchewan.**—The Saskatchewan Power Commission was established in 1929 under the Power Commission Act (R.S.S., 1930, c. 30), authorizing the Commission to manufacture, sell and supply electrical energy, to acquire and develop water-power sites, to acquire or construct steam and oil plants, to construct transmission lines, to purchase power and to enter into contracts with municipalities for the supply of energy. The Commission is also given certain control and regulatory powers *re* the operation of electric public utilities, and is charged with the responsibility for the administration of the Electrical Licensing Act (R.S.S., 1930, c. 214).

The initial operations of the Commission were concerned with acquiring by purchase municipally-owned plants which were improved, enlarged or supplemented by installations made by the Commission and were operated as individual systems of supply. Examples of such acquisitions made in 1929 were the Saskatoon, Humboldt and Rosthern plants, while the plant at Shellbrook, the Wynyard-Elfrs-Wadena and the Leader-Prelate-Sceptre systems, served from plants at Wynyard and Leader, were established by the Commission in the same year. In 1930 the municipal plants at North Battleford, Swift Current, Unity, Maple Creek and

Lanigan were acquired, and in 1931 the generating plant at Willow Bunch was added. The Watrous-Nokomis system, including ten towns and villages, was also purchased from Canadian Utilities, Ltd., and has been connected with the Bulyea system of the Montreal Engineering Co., Ltd.

Transmission lines run from Saskatoon, as the centre of the main system, easterly to Humboldt, northerly to Shellbrook and Duck Lake, westerly to Radisson, and southwesterly to Rosetown. Additional lines link Rosetown with Moose Jaw and Tisdale, where the Commission has a generating plant, with Nipawin. The systems built in 1929 have been extended. All transmission lines supply towns and villages along their courses. There are now 1,357 miles of transmission lines owned and operated.

The Commission purchases several blocks of power or contracts for the interchange of power from private interests in addition to supplying energy generated at its own plants. The number of consumers served directly in 123 towns and villages is approximately 7,574 and those indirectly served (where the cities operate the distribution systems) number 15,833. The total plant investment as at Dec. 31, 1933, was approximately \$7,618,279.

**British Columbia.**—British Columbia as a province has not, up to the present time, established any commissions for the development and use of water power for the distribution of electrical energy. Such power developments as have been undertaken to date have been by private interests or by municipalities. The Water Board, a quasi-judicial body, regulates the rates which are charged by public utility companies.

## CHAPTER XIV.—MANUFACTURES.\*

### Section 1.—The Evolution of Canadian Manufacturing Industries.

**Early Manufactures.**—The type of manufactures established in a community will, in the beginning, be largely determined, more especially where transportation charges are high, by the raw materials available in that community. For example, probably the first agricultural process to be carried on by Europeans in what is now the Dominion of Canada was the raising of a crop of grain at Port Royal, Nova Scotia, in 1605; the first corresponding manufacturing process was the grinding of the grain in the autumn of that year. Other early manufactures were also necessarily connected with the satisfaction of the primary needs of human beings for food, clothing and shelter, and with the other primary need for protection. At a census of occupations taken in 1681, we find enumerated a comparatively large number of tailors and shoemakers, masons and carpenters, gunsmiths and edge-tool makers.

The earlier manufactures were necessarily of a rather crude and primitive type, concerned with the production of commodities which were too bulky to bear the heavy transportation charges of those days, when only one round trip per year could be made between France and Quebec, and vessels were constantly subject to the storms of the North Atlantic and very frequently to the attacks of the English. Indeed, although the colonial policy of France under the old *régime* aimed at preventing the manufacture in Canada of any article which could be imported from the Mother Country, the uncertainties of transportation due to the colonial wars of the period—France and England were at war for 34 years out of the 74 years between 1689 and 1763—led to a necessary relaxation of restrictions. On the occasion of the English capture of a convoy in 1705, the colonists were driven to manufacture rough cloth out of whatever fibres they could obtain, such as the Canadian nettle and the inner bark of the basswood. Such events led to the introduction of sheep raising and the manufacturing of homespun woollens. From these humble beginnings arose the important textile industries of to-day which are able to produce the finest fabrics of cotton, wool or silk.

In the days when ships were built of wood Canada was advantageously situated with respect to their production. Pont-Gravé built two small vessels at Port Royal in 1606 and one at Tadoussac in 1608. Talon, in 1666, built on his private account a ship of 120 tons, and in 1672 a vessel of over 400 tons was on the stocks at Quebec. Ships were built for the French navy and for the West India trade. Under the British *régime* shipbuilding was conducted on a large scale in Quebec and New Brunswick, the industry reaching its climax of prosperity about 1865, when 105 Quebec-built ships, with a total tonnage of 59,333, were registered. Thereafter iron and steel ships gradually supplanted the wooden vessels, but the forests of Canada have since provided the raw material for the pulp and paper and other important industries.

The manufacture of mineral products has been of comparatively recent date. Iron deposits in the St. Maurice region were worked as early as 1733 and furnaces

\* Revised by A. Cohen, B. Com., Acting Chief, General Manufactures Branch, Dominion Bureau of Statistics. This Branch publishes individual reports on the vegetable products, textile and miscellaneous manufacturing industries, also reports on the manufacturing industries generally for Canada and the provinces. For a complete list of publications of this Branch see Chapter XXIX, Section 1, under "Production".

set up there for smelting in 1737 were in fairly constant operation until 1883. The iron and steel used in manufacturing in Canada, as well as the coal which has supplied the manufacturing industries with power, has in the main been imported from the United States, chiefly because the principal manufacturing centres of this country in the St. Lawrence and Great Lakes region are fairly conveniently situated with regard to the coal and iron supplies of the United States and far away from the coal and iron supplies of the Maritime Provinces. In recent years the shortage of coal has been made up for by the increasing use of electric power, while the great bulk of the pig iron used in Canadian manufactures is now made in domestic blast furnaces.

#### **Subsection 1.—Growth of Manufacturing in Canada since 1870.**

**Growth of Canadian Manufactures Prior to the War.**—Until the later '90's, the growth of Canadian manufacturing industries was not particularly rapid, though the great fall in the prices of commodities during the period from 1873 to 1897 was largely responsible for the comparatively slow growth of the values of manufactured commodities from \$221,600,000 in 1870 to \$469,800,000 in 1890. Afterwards there was a change and the prices of commodities commenced to rise, while the industries generally shared in the advantages of the great growing period from 1900 to 1912. The gross product of establishments with five hands or over increased from \$368,700,000 in 1890 to \$1,166,000,000 in 1910 and to \$1,381,500,000 in 1915. The fundamental advantages of the position of Canada, her abundant raw material, her inexhaustible water power, her growing home market in the expanding West, had contributed to this result.

In the present, as in the past, Canadian manufacturing production has been chiefly dependent upon the use of Canadian raw material, though this is less true than formerly. Raw cotton, for example, is imported from the Southern States, hides from Argentina, rubber from the Straits Settlements and Malay peninsula, sugar from Fiji and the British West Indies, and wool from England, Australia and New Zealand to supply the raw material for Canadian manufacturing industries.

**The Influence of the War.**—The influence of the War upon the manufactures of Canada was profound and far-reaching, tending to promote the diversification of products and the production at home of many commodities which had previously been imported. On account of the practical suspension of the importation of manufactured goods of many kinds from Europe, enterprising Canadian manufacturers were given opportunities of entering upon new lines of manufacture with practical control of the market. There was added to this the reflex effect of the great prosperity of agriculture, produced by the unprecedented prices of war time, with the general result that industry worked at high pressure, not only to produce munitions and military supplies for the armies of the Allies, but also to make the manifold varieties of goods required for the stimulated civilian consumption. The world shortage of staple commodities, coupled with a strong domestic demand, gave Canadian industries in general a pronounced stimulus toward greater production and, in a great number of cases, the capacity of manufacturing plants was increased; this increase created a demand for greater supplies of raw material. Incidentally, factory methods became more specialized and a high degree of administrative and mechanical efficiency was attained, and Canada, partly owing to the absorption of the energies of Europe in the War, assumed a new position as one of the leading manufacturing countries of the world. The inflation of the war period also led to unprecedented figures of values produced.

The great boom in Canadian manufactures described above reached its height in the summer of 1920, statistics for that year showing a gross value of products which was not exceeded until 1929. These values in 1929 reached a higher point than in the post-war boom of 1920, although the prices of manufactured goods had dropped about 41 p.c. in the intervening period. This steady expansion was halted during 1930, owing to the world-wide recession in business which set in toward the end of 1929, with the result that Canadian manufacturing production in 1930 which was valued at \$3,428,970,628 dropped back to near the 1927 level. The recession in manufacturing activity continued during 1931, 1932 and 1933, as a result of which the gross value of production dropped still lower, *viz.*, to \$2,086,847,847. However, employment reported by manufacturing firms showed an increase of 11 p.c. in 1934 over 1933, indicating an upturn in manufacturing activity in 1934.

The growth of manufacturing production since 1870 is shown in Table 1 following, while the increasing importance of Canadian manufacturing for the international market may be illustrated by the fact that Canadian exports of manufactured produce increased from less than \$3,000,000 per annum on the average of 1871-75 to \$614,000,000 in the post-war fiscal year ended Mar. 31, 1920. Exports of "fully or chiefly manufactured" products in the fiscal year ended Mar. 31, 1933, amounted in value to \$202,729,536 and exports of "partly manufactured" products to \$66,693,633.

### 1.—Historical Summary of Statistics of Manufactures for the Dominion, 1870-1932.

NOTE.—Certain duplications in the gross revenue of central electric stations were eliminated in a net figure and the difference shown as a "cost of material" for the years 1926-29, but net revenues only are now included for both gross and net values for those years. Therefore, the figures here given differ slightly from those formerly published. Also prior to 1929 totals for the chemicals and allied products industry included the value placed on intermediate products used in further processes in the producing works. To this extent, totals are not comparable to those of 1929 and subsequent years. Further, statistics of the non-ferrous metal smelting industries were included in manufactures for the first time in 1925.

| Year.                                                         | Establishments. | Capital.      | Employees. | Salaries and Wages. | Cost of Materials. | Net Value of Products. | Gross Value of Products. |
|---------------------------------------------------------------|-----------------|---------------|------------|---------------------|--------------------|------------------------|--------------------------|
|                                                               | No.             | \$            | No.        | \$                  | \$                 | \$                     | \$                       |
| (All establishments irrespective of the number of employees.) |                 |               |            |                     |                    |                        |                          |
| 1870.....                                                     | 41,259          | 77,964,020    | 187,942    | 40,851,009          | 124,907,846        | 95,709,927             | 221,617,773              |
| 1880.....                                                     | 49,722          | 165,302,623   | 254,935    | 59,429,002          | 179,918,593        | 129,757,475            | 309,676,066              |
| 1890.....                                                     | 75,964          | 353,213,000   | 369,595    | 100,415,350         | 250,759,292        | 219,088,594            | 469,847,886              |
| (Establishments with five hands and over.)                    |                 |               |            |                     |                    |                        |                          |
| 1890.....                                                     | 14,065          | -             | 272,033    | 79,234,311          | -                  | -                      | 368,696,723              |
| 1900.....                                                     | 14,650          | 446,916,487   | 339,173    | 113,249,350         | 266,527,858        | 214,525,517            | 481,053,375              |
| 1910.....                                                     | 19,218          | 1,247,583,609 | 515,203    | 241,003,416         | 601,509,018        | 564,466,621            | 1,165,975,639            |
| 1915.....                                                     | 15,593          | 1,958,705,230 | -          | 283,311,505         | 791,943,433        | 589,603,792            | 1,381,547,225            |
| (All establishments irrespective of the number of employees.) |                 |               |            |                     |                    |                        |                          |
| 1917.....                                                     | 22,838          | 2,696,154,030 | 621,694    | 509,382,027         | 1,541,087,416      | 1,332,180,767          | 2,873,268,183            |

#### Subsection 2.—Summary Statistics of Manufacturing Production.

**Summary Statistics of Manufactures.**—In Table 4 will be found an analysis of the most important statistics of manufacture for the period 1917 to 1933, here brought together in order that the tendencies in Canadian manufacturing industries may be traced as clearly as possible through this latest period of their development. In analysing statistics of production and materials used, it should be borne in mind that due to the inflation of values during the war and immediate post-war periods and the drop in prices of commodities during the depressions of 1921 and 1930 the figures for these years become largely incomparable. One very important figure, however, where the trend of development proceeds clearly and uninterruptedly, is concerned with the use of power. In the analysis here given the aim is to show the position of power as a factor in general manufacturing production. Therefore, the power installation of central electric stations has been excluded. The total horse-power employed increased from 1,664,578 in 1917 to 4,157,420 in 1932 or an increase of 150 p.c. in 15 years. In the same period, the number of horse-power used per establishment increased from 75 to 177 and the number of horse-power per wage-earner from 3.04 to 10.62, indicating the rapidly increasing utilization of power in manufacturing production. The figures for 1933 show a small decrease from 1932. The increase from \$118,056 to \$193,174 in average capital per establishment between 1917 and 1932, and the decrease from 27.2 to 20.2 in the average number of employees are very significant figures. Another interesting comparison is the progressive decrease in the value added by manufacture per employee and the average salaries and wages paid since 1929. Between 1917 and 1929 the value added by manufacture per employee increased from \$2,143 to \$2,877 and then declined in 1933 to \$2,263, while average salaries and wages increased from \$819 in 1917 to \$1,171 in 1929 with a decline to \$943 in 1933. Compared with 1917, the figures for average salaries and wages in 1933 represent an increase of 15 p.c. while the increase in the value added by manufacture per employee was only 5.6 p.c. and wholesale prices of commodities declined 41.3 p.c. in the same period.

4.—Summary Statistics of Manufactures for Representative Years, 1917-33.

| Item.                                                            | 1917.         | 1920.         | 1921.         | 1924.         | 1929. <sup>1</sup> | 1931.         | 1932.         | 1933.         |

| Average wage.....                                                | 1,009         | 1,109         | 1,002         | 1,045         | 1,045              | 957           | 852           | 785           |
| Cost of materials.....                                           | 1,541,087,416 | 2,085,271,649 | 1,366,893,685 | 1,438,409,681 | 2,032,020,375      | 1,223,880,011 | 955,868,683   | 969,188,574   |
| Average cost of materials per establishment.....                 | 67,479        | 89,301        | 61,475        | 64,858        | 86,114             | 49,952        | 38,949        | 38,411        |
| Average cost of materials per employee.....                      | 2,479         | 3,421         | 2,997         | 2,829         | 2,026              | 2,105         | 1,930         | 1,962         |
| Value added in manufacture.....                                  | 1,332,180,767 | 1,686,978,408 | 1,209,143,344 | 1,256,643,901 | 1,997,350,365      | 1,474,581,851 | 1,170,225,872 | 1,117,659,273 |
| Average value added per establishment.....                       | 58,332        | 72,245        | 54,380        | 56,062        | 84,645             | 60,185        | 47,879        | 44,295        |
| Average value added per employee.....                            | 2,143         | 2,767         | 2,651         | 2,473         | 2,577              | 2,645         | 2,362         | 2,263         |
| Gross value of products.....                                     | 2,873,268,183 | 3,772,250,057 | 2,576,037,029 | 2,695,053,582 | 4,029,371,340      | 2,698,461,862 | 2,126,194,555 | 2,086,847,847 |
| Average gross value of product per establishment.....            | 125,811       | 161,546       | 115,855       | 121,519       | 170,758            | 110,137       | 86,628        | 82,706        |
| Average gross value of product per employee.....                 | 4,622         | 6,188         | 5,648         | 5,300         | 5,782              | 4,841         | 4,292         | 4,225         |
| Power employed <sup>2</sup> .....                                | 1,064,578     | 2,068,745     | 1,781,770     | 2,538,585     | 3,867,979          | 4,114,677     | 4,157,420     | 4,147,881     |
| Average number of horse-power per establishment.....             | 75            | 92            | 83            | 120           | 171                | 175           | 177           | 172           |
| Average number of horse-power per wage-earner <sup>3</sup> ..... | 3.04          | 3.97          | 4.75          | 5.97          | 6.58               | 8.99          | 10.62         | 10.61         |

<sup>1</sup>A change in the method of computing the number of wage-earners in the years 1925 to 1930 inclusive increased the number somewhat over that which the method otherwise used would have given. There was therefore a proportionate reduction in the averages for 1925-30 per employee and wage-earner, as compared with what these averages would have been under the other method. In 1931, however, the method in force prior to 1925 was re-adopted. The figures for 1931 and later years are therefore comparable with those for 1924 and earlier years.

<sup>2</sup>The figures for power in this table represent the installation in manufactures exclusive of central electric stations, which are also excluded from the number of establishments and of wage-earners in working out the averages.

**Value of Products.**—The gross value of manufactured products in 1932 was reported as \$2,126,194,555; the cost of materials was \$955,968,683, leaving \$1,170,225,872 as the value added by manufacture. As the finished products of one branch of manufacture are constantly used as materials in other branches in the ascending scale of modern industry, it follows that they are counted over and over again, swelling in this manner the total gross value of products. The total value of manufactured products, strictly defined, would include: (1) the value of all raw materials obtained from the extractive and primary production industries which have entered into the manufacturing output; and (2) the entire value added to these raw materials by manufacturing processes from the time they first entered any factory up to the close of the census year. This total value would be very much greater than the \$1,170,225,872 shown as having been added by manufacture, but not so great as the \$2,126,194,555 shown as the gross value of production. (The decline of \$572,000,000 in gross value of products in 1932 was partly accounted for by a drop of \$268,000,000 in the cost of materials.)

**Volume of Manufacturing Production in Recent Years.\***—An investigation of the greatest importance, especially in a period when values are rapidly changing, is that of the volume of manufacturing production as distinguished from its value. Since real income is ultimately measured in goods and services, the growth of the volume of manufactures therefore becomes a matter of great importance. The important thing to know is whether consumers are getting more goods and services, not whether they are expending more dollars and cents.

The ever-increasing use of factory products is one of the most significant features of modern life. The process has continued until at the present time fresh fruits and vegetables are about the only articles which reach the consumer without, in some way, being first processed at a factory. Fresh milk is pasteurized and bottled in a dairy plant, fresh fish and meats are dressed principally in packing plants, and the home preserving of fruits and vegetables is being superseded by more efficient processes in the canning factory. Thus even the foods we eat, as well as the clothing we wear, our household conveniences and our instruments of production and transportation, are increasingly products of factories. The growing volume of factory production, therefore, measures approximately the total flow of the economic goods upon which the rising standards of modern life so vitally depend.

The statistics of manufactures afford a variety of measures of the growth of factory production. The number of wage-earners, capital invested, value of production and value added by manufacture all show to some extent the direction and volume of growth. The value of production and that added by manufacture, being reported in dollars, are influenced by price changes as well as by the quantity of goods produced and, as already explained, are rendered misleading by the violent price changes of the past fifteen years. The capital invested is also affected by changing money values, while the relation between capital invested and value of goods produced varies greatly as between one industry and another. Neither is the number of wage-earners employed likely to be a representative measure of changes in the volume of production. The progressively increasing use of machinery and the rise in the power installed per wage-earner (see Table 4) tend to increase the employee's output. Thus while the reported wage-earners in 1931 had increased

---

\*For a much more detailed and comprehensive treatment of this subject see the study "The Quantity of Manufacturing Production in Canada, 1923-29" by A. Cohen, B. Com., Acting Chief, General Manufactures Branch, Dominion Bureau of Statistics.

2.4 p.c. over the number in 1923, the volume of production is estimated to have increased by 18.3 p.c. in the same period.

The central electric stations were excluded from general manufactures in making the index; since this industry is in a class by itself in the peculiar function of its product, and is also unique in the magnitude of its capital investment and the smallness of its labour force in proportion to its net production. The index is based on the quantities of manufactured products reported and includes 71.1 p.c. of the total value of the production in 1926, exclusive of central electric stations. It is weighted according to the values added by manufacture in 1926. A complete description of the manner in which the index is constructed will be found in the publication referred to in the footnote on p. 450.

The physical volume of manufacturing production, exclusive of central electric stations, increased 50.2 p.c. from 1923 to 1929. When it is recalled that the population of Canada is estimated to have increased only 11.3 p.c. during the same period, the growth of manufacturing production is indeed remarkable. Of this advance, the part resulting from an increase in the domestic demand due to growth of population would be about 11.3 p.c. Exports of partly and fully manufactured goods increased from \$591,830,000 in the fiscal year ended Mar. 31, 1924, to \$690,904,000 in the fiscal year 1930, the increase in exports representing about 3.6 p.c. of the 1923 production. The remainder of the increase in production by 1929, or a margin equal to roughly 35 p.c. of the volume of manufactures of 1923, was therefore apparently absorbed by the rise in the standard of living of the population of Canada, and by the increase of that population.

The index of the volume of production dropped from 150.2 in 1929 to 100.1 in 1932, a decrease of 33.4 p.c. This decrease is very significant when compared with the decrease in the net value of production and the number of wage-earners employed.

Owing to declines in the values of finished products (due, in a large degree, to the drastic declines in the values of raw materials) and to the decrease in the volume of production, the net value of production dropped from \$1,997,350,365 in 1929 to \$1,170,225,872 in 1932, a decrease of 41.4 p.c., while the number of wage-earners dropped from 597,827 to 400,328, a decrease of 33 p.c. It will be noted that the percentage decrease in the volume of production between 1929 and 1932, *viz.*, 33.4, was 0.4 greater than the percentage decrease in the number of wage-earners in the same period. This bears out the observations made in the special study on the volume of production that records of the number of wage-earners may be regarded as more likely to understate than to overstate the changes in the volume of production. As stated previously, the tendency is towards increasing production per wage-earner through greater efficiency and increased use of machinery and labour-saving devices. Also, in times of depression, many establishments follow the practice of keeping the wage-earners on the pay-roll on a part-time basis rather than laying some of them off and employing the rest on full time, while in periods of increased industrial activity the additional output required is secured through overtime work rather than by increasing the number of wage-earners. The net result is to confine fluctuations in the number of wage-earners within narrower limits than that of the physical volume of production. All things considered, however, the average number of wage-earners is materially influenced by the fluctuations in industrial activity. The decrease in the volume of production as compared with the decrease in the number of wage-earners since 1929 is really much greater than the 0.4 p.c. mentioned

above. This fact, however, is obscured by the following changes in procedure: First, the large decrease in the number of wage-earners in 1931 is not entirely due to the decline in manufacturing production. The decrease is in part due to the change in method of computing the average annual employment. Between 1925 and 1930 the average was obtained by summing the averages of individual plants, based on the number of months in actual operation and not by dividing by 12 the sum of the monthly employment figures. For example, if a plant operated only during three months of the year with an employment of 100 persons the first month, 125 the second month and 75 the third month, its average annual employment was taken as  $100 (300 \div 3)$ ; the same as that of another plant which operated the whole year with an average employment of 100 persons per month. In 1931, however, a change was made to the old method whereby the aggregate of the monthly figures is divided by 12. As a result of this change, the average annual employment in such seasonal industries as fruit and vegetable canning and sawmilling was, therefore, considerably lower than formerly without the number of wage-earners being correspondingly smaller. Secondly, prior to 1931, owners working as ordinary wage-earners, such as small bakers, operators of sawmills and grist-mills, etc., reported themselves as wage-earners. In 1931, however, all such owners were required to report themselves as salaried employees. By making allowances for the above changes it would be found that in 1931 also the number of wage-earners declined less than the volume of production.

As may be seen from Table 5, all groups in the component material classification reported declines in the volume of production. As compared with 1929, the iron and steel group in 1932 led with a decrease of 58.8 p.c. This was followed by non-metallic mineral products with a decrease of 41.8 p.c., miscellaneous industries 39.9 p.c., wood and paper products 31.6 p.c., non-ferrous metals 27.6 p.c., vegetable products 24.0 p.c., chemicals and allied products 22.2 p.c., textiles and textile products 13.3 p.c. and animal products 12.8 p.c.

When the changes in the volume of production are analysed on a purpose classification basis, some interesting facts are revealed. As compared with 1929, the food group showed a decrease of 9.9 p.c. while production of clothing decreased 18.8 p.c. The output of vehicles and vessels, which is largely made up of the automobile and rubber-tire industries, recorded a decrease of 60.2 p.c.; this is the greatest decrease of any group. Producers' materials and industrial equipment declined 39.9 p.c. and 41.6 p.c. respectively, owing to the general decline in industrial activity. House furnishings dropped 34.7 p.c., personal utilities 30.7 p.c., drink and tobacco 27.5 p.c. and books and stationery 2.9 p.c. The decrease in the personal utilities group, however, is misleading. The production of the musical instruments industry, which is included in this group, has been decreasing steadily during the past few years; the output of pianos, phonographs and phonograph records is becoming smaller and smaller. The main product of the musical instruments industry, namely, the radio, is now produced in the electrical apparatus industry. This industry, however, is classified in the industrial equipment group, as by far the largest part of its output consists of industrial equipment.

### 5.—Indexes of the Volume of Manufacturing Production, According to Component Material and Purpose Classifications, 1924-32.

(1923=100.)

| Group.                                         | 1924.       | 1925.        | 1926.        | 1927.        | 1928.        | 1929.        | 1930.        | 1931.        | 1932.        |

| Books and stationery.....                      | 83.4        | 97.6         | 107.4        | 119.3        | 132.0        | 141.2        | 140.3        | 133.7        | 137.1        |
| Vehicles and vessels.....                      | 87.1        | 107.7        | 140.1        | 148.9        | 158.5        | 184.3        | 149.4        | 106.9        | 73.4         |
| Producers' materials.....                      | 94.9        | 103.8        | 117.8        | 125.0        | 138.0        | 146.9        | 130.0        | 110.2        | 88.3         |
| Industrial equipment.....                      | 99.7        | 108.3        | 131.1        | 142.6        | 157.9        | 169.7        | 150.7        | 127.4        | 99.1         |
| Miscellaneous.....                             | 104.8       | 108.4        | 117.6        | 124.1        | 133.4        | 147.1        | 123.4        | 125.4        | 116.9        |

<sup>1</sup>Exclusive of central electric stations.

This new index of the volume of manufacturing production has superseded for 1923 and later years the index shown in Table 4 of this chapter in the 1931 and earlier Year Books. The former index, which made no pretence to the reliability of the new one, was made by dividing the gross value of manufactures by the index number of the prices of manufactured goods. The central electric stations were included in the former index, while they are excluded from the new one. However, the former index covered the period 1917 to 1923 not covered in the new one and, since this earlier period was one of wide fluctuations in money values, the following index numbers are given for the whole period since 1917, using the earlier method, but excluding central electric stations, for the years 1917 to 1923, and the new index, transposed to the 1917 base, from 1923 to 1932.

#### INDEXES OF THE VOLUME OF MANUFACTURING PRODUCTION, 1917-32.

(1917=100.)

|           |       |           |       |           |       |           |       |
|-----------|-------|-----------|-------|-----------|-------|-----------|-------|
| 1917..... | 100.0 | 1921..... | 86.1  | 1925..... | 112.7 | 1929..... | 157.5 |
| 1918..... | 102.0 | 1922..... | 96.0  | 1926..... | 128.1 | 1930..... | 142.8 |
| 1919..... | 98.1  | 1923..... | 104.8 | 1927..... | 136.5 | 1931..... | 124.1 |
| 1920..... | 95.0  | 1924..... | 102.9 | 1928..... | 148.8 | 1932..... | 105.0 |

**Consumption of Manufactured Products.**—One of the beneficial results of placing the classification of external trade and of production upon a common basis is exhibited in Table 6, where the value of commodities made available for consumption in Canada is derived from the statistics of the two important fields. For example, the value of all manufactured commodities made available in a period

approximately corresponding to 1932 was \$2,138,700,245, a figure obtained by adding to the value of products manufactured in 1932 the value of the imports of manufactured and partly manufactured goods during the fiscal year ended Mar. 31, 1933, and deducting the value of the corresponding exports for the same period. In this table more accurate statistics could be presented were it possible to exclude from the gross value of manufactured products the duplications involved when the products of one manufacturing establishment become the materials worked upon in another. Vegetable, textile, wood and paper, iron and animal products were, in that order, the leading groups in the value of finished goods made available for consumption. The large amount of manufactured vegetable products made available for consumption was due to the large domestic production, as the exports and imports were about equal, while manufactures of textiles and iron and steel products, in addition to a large production, showed an excess of imports over exports of \$40,000,000 for textiles, and \$40,000,000 for iron and steel products. Wood and paper, animal and non-ferrous metal products were manufactured in Canada in greater quantities than required for home consumption, providing export balances in these groups of commodities.

#### 6.—Consumption of Manufactured Products, by Groups, 1932, with Totals for 1922-32.

NOTE.—Statistics of manufacturing production are for the calendar year. Imports and exports of manufactured and partly manufactured goods are for the fiscal years ended Mar. 31 of the following years.

| Group of Industries.               | Value of<br>Products<br>Manufactured. | Manufactured and Partly<br>Manufactured Goods. |                                  | Value of<br>Manufactured<br>Products<br>Available<br>for<br>Consumption. <sup>1</sup> |

<sup>1</sup>For 1928 to 1932 foreign products imported and later re-exported are eliminated from the value of products available for consumption, but for 1927 and previous years this was impossible since foreign exports for these years had never been analyzed as raw materials or partly or fully manufactured goods. Therefore in this table the value of manufactured products made available for consumption, for the years 1922 to 1927 inclusive, is an overstatement by the amount of the foreign exports of manufactured goods in each year, probably varying from about \$11,000,000 in 1922 to \$18,000,000 in 1927.

## Section 2.—Production of Industrial Groups and Individual Industries.

One of the factors in the progress of Canada is the possession of many natural resources favourable to industrial growth. It is upon the country's agricultural resources, forests, minerals and wild life that Canada's industries are mainly based. The sea and lake fisheries also make an important contribution of raw materials to the manufacturing industries of the Dominion. Nevertheless, the industrial development of Canada was a matter of small beginnings and gradual growth over a period of many years, and the comparatively small home market, restricted at the present time to a population of about ten millions, a large part of it in scattered agricultural areas, is still one of the difficulties of the situation. Yet Canada is now not merely the second largest manufacturing country in the British Empire; her exports to the other Dominions consist largely of manufactured goods and her exports of manufactured and partly manufactured goods to the United States exceed the exports of raw materials. The rate at which this movement is to continue will depend almost entirely upon growth within the Dominion—upon the further development of the many-sided physical assets of the country.

### Subsection 1.—Manufactures Grouped by Chief Component Materials.

A classification based on the chief component materials in the various products of each manufacturing establishment was applied for the first time in the compilation of the returns for 1920. The number of groups was reduced from fifteen to nine to correspond with the external trade classification and the classes of industry were somewhat altered to conform with recent industrial developments. Subsequently the central electric stations industry was taken out of the miscellaneous class and now forms a class by itself.

**Vegetable Products.**—Though first in value of gross production in 1932 this group ranked only fourth in the number of people employed and salaries and wages paid. With the exception of rubber, coffee and spices, sugar factories, and rice mills, the industries of this group are dependent mainly upon domestic farm products for their raw materials. They produced in 1932, 20.6 p.c. of the total manufacturing production and employed 14.6 p.c. of all persons engaged in manufacturing industries.

The flour-milling industry is the leading industry of the group from the point of view of gross value of products. This industry, which has existed to meet the domestic needs for more than 300 years, is one of the Dominion's oldest manufactures, but it is only within recent times that its progress has become spectacular. The War and the demand it created gave a great impetus to this trade. The 394 flour mills, many of them of the most modern type and highest efficiency, have a capacity far in excess of Canada's demands. During 1928, productive capacity reached about 121,000 barrels per day. Since then, the industry has been adversely affected by the difficulties which beset the Canadian grain trade and the great decline in the prices of grains. Exports of wheat flour declined from 10,737,266 barrels in 1928 to 5,131,781 barrels in 1932, but in spite of the decrease, Canada continues to be one of the leading exporters of wheat flour.

The rubber industry is another industry of importance in the industrial life of the country. Canada now ranks among the leading countries of the world as a manufacturer of rubber goods. In 1930 she was the fifth largest importer of raw rubber in the world, ranking after the United States, the United Kingdom, France and Germany. In 1932, however, Japan and Russia also were ahead of Canada in the imports of raw rubber. Existing plants in 1932 numbered 47 and represented a capital investment of \$65,794,903, including equipment and working capital. These plants furnished employment to 10,325 persons who received \$9,340,911 in salaries and wages and produced goods valued at \$40,746,910. They also used raw materials to the value of \$11,906,696, mainly imported from tropical countries. The rubber industry also forms an adjunct of considerable importance to the cotton yarn and cloth industry, which supplies tire fabrics. The industry, besides supplying the domestic market, contributes materially to the export trade of Canada. The products find their way to the remotest parts of the world, as a glance at the list of countries to which rubber tires are shipped, would show. Spain, Peru, Dutch East Indies, Portuguese Africa and China are but a few of the far-flung countries into which Canadian tires find their way.

The fruit and vegetable preparations industry, which includes canned fruits, canned vegetables, pickles, vinegar, jams, etc., comprises another large division of this group. In 1932, this industry reported an output valued at \$30,034,537, a capital investment of \$40,586,892 and an employment of 5,954 persons, who received \$4,056,746 in salaries and wages. The development of the canned-foods trade has effected great changes in the relation of foods to seasons. Fruits and vegetables of many kinds are to be had at all times of the year with much of their original freshness and flavour. The producers in the country are provided with an enormously extended market and the consumers in both city and country with cheap and wholesome food in great variety. The industry has made rapid strides in the past few years. During the period of 1923-32 the volume of fruit and vegetable preparations produced increased 88.6 p.c. This growth is indeed remarkable, as it represents a corresponding increase in the domestic demand for these products, the foreign trade being relatively small as compared with the domestic production. Imports in 1932 were valued at \$2,381,568 and exports at \$2,723,326. According to these figures, the industry besides supplying the domestic requirements also has a small exportable surplus.

The sugar-refining industry is also of substantial importance. The demands created by the War gave it a great impetus. All things considered, 1919 was a record year. The number of persons employed (3,491), the value added by manufacture (\$16,321,882) and the exports (\$22,953,135) were the highest recorded, while the volume of sugar manufactured was only 10 p.c. lower than that of the peak year 1925, when 11,714,967 cwt. was produced. Since 1925, however, exports of sugar have declined with the result that production and employment slackened considerably. In 1932, the 8 sugar refineries reported a capital investment of \$37,654,457 and a value of production of \$41,022,589. They also employed 2,140 persons, receiving \$3,147,753 in salaries and wages, and they paid out \$25,716,922 for materials. Exports of sugar in 1932 amounted to 90,483 cwt. valued at \$428,337.

The beverage industry—breweries, distilleries and wineries—which are important elements of the vegetable products group, have expanded from a production of \$30,000,000 in 1922 to \$53,000,000 in 1932, owing partly to the modification of

prohibition laws in Canada and also to the fact that a large part of their production was exported directly or indirectly to the United States. The manufactured tobacco industry, another important factor in the vegetable products group, had a total production in 1932 of over \$37,000,000 and a payroll of 8,236 persons, who received \$7,127,070 in salaries and wages.

**Animal Products.**—Production in this group is determined, in large measure, by the demand at home and abroad for Canadian butter, cheese, canned fish, fresh or frozen meats, bacon and hams, condensed and evaporated milk, etc.

The leading industry of the group is that of slaughtering and meat packing, with a value of production in 1932 of \$91,246,523. Next comes butter and cheese, with a value of \$78,712,905. These two industries represent about two-thirds of the production of the entire group.

The butter and cheese industry, which manufactures a product of farm animals, has been for many years of leading importance in Canada. Originating in the agricultural districts of the Maritime Provinces, the Eastern Townships of Quebec, and the southern counties of Ontario, it is now developing rapidly in the Prairie Provinces and in the more recent northern settlements of Quebec and Ontario. For an industry so large in the aggregate, it is unique in having shown very little tendency toward consolidation in large units, the gross production of \$78,712,905 coming from no fewer than 2,708 plants, mostly small and scattered at convenient points throughout the farming communities.

The leather industries have long been established on a considerable scale, mainly, of course, because the large number of cattle raised and slaughtered provide a ready supply of hides. There are large tanneries in the eastern provinces, and no fewer than 191 boot and shoe factories were in operation in 1932, chiefly in Quebec and Ontario, representing a total capital of over \$22,000,000 with an annual output of over \$32,000,000 and employing 13,728 men and women. The canning and preserving of fish also calls for reference. Concentrated naturally upon the Pacific and Atlantic coasts, 629 establishments were engaged in 1932 in canning, curing and packing various kinds of fish that were valued at nearly \$17,000,000.

**Textile Products.**—The output of textiles in 1932 was valued at \$274,411,736. The establishments classified in this group which numbered 2,002 represent a capital investment of \$321,593,062; they furnished employment to 102,116 persons who were paid \$82,817,944 in salaries and wages and also spent \$129,468,738 for raw materials.

In net production, *i.e.*, in value added by manufacture, which is a truer criterion than gross production of the place of the group in the industrial life of the country the textile group was third in 1932 among the ten major groups shown in the summary statistics of Table 3, p. 447, being exceeded only by the wood and vegetable products groups. Textiles accounted for over 12 p.c. of the net manufacturing production of Canada. As an indication of the contribution which the textile group made in 1932 to the employment in the Dominion, the group stood second in the number of employees and also second in salaries and wages paid, with nearly 18 p.c. of the total employees in manufacturing and 13 p.c. of the total salaries and wages paid. Again this wide group of industries may be regarded as two distinct divisions: (1) the spinning, weaving and knitting trades, and (2) the finishing trades. If so regarded, the first division assumes the proportions of a very large industrial group

with a gross production for 1932 of \$136,897,332, while the second division is still larger with \$137,514,404 for gross production.

The hosiery and knitted goods industry is worthy of special mention. From the standpoint of the value of production the hosiery and knitted goods industry ranked first in the textile group in 1932. Despite the depressed condition of the textile industry generally, the volume and value of production in this branch of the industry held up remarkably well, the value of production being \$16,247,308 or 27.3 p.c. lower than the peak year of 1929. Employment also declined by 1,393 or 7.3 p.c. Due to the drastic declines in the value of raw materials with the consequent declines in the value of finished products, the employment figure is a better criterion of the recession experienced by this industry since 1929. The production of hosiery of all kinds in 1932 ranked first in importance with an output valued at \$18,683,811. Next in order came underwear, combination and separate garments with a value of \$11,122,328. Various other knitted and woven goods, yarns and numerous small sundries made up the balance. The industry is located chiefly in the province of Ontario, the 110 establishments located there producing \$28,602,549 or 66 p.c. of the entire output. The province of Quebec followed with an output of \$11,727,858 or 27 p.c. of the total.

Other important industries in this group, with the numbers of their employees and values of production, are as follows: women's factory clothing (products \$42,564,589, employees 14,276); cotton yarn and cloth (products \$38,555,370, employees 15,092); men's factory clothing (products \$27,289,591, employees 8,098); silk (products \$19,864,843, employees 7,036); men's furnishing goods (products \$17,607,656, employees 7,565); dyeing, cleaning and laundry work (products \$17,302,779, employees 11,170); woollen cloth (products \$13,127,796, employees 4,990); and hats and caps (products \$9,464,267, employees 3,095).

The outstanding feature of the textile situation in Canada was the spectacular expansion of the silk industry during the past few years, at a time when practically all other industries were experiencing a diminishing demand for their products. Compared with 1926, this industry increased its output by \$11,357,690 or 134 p.c. and also furnished employment to 4,613 more people in 1932; this represented an increase in employment of 190 p.c.

Reports were received from 2,002 establishments in the textile industries in 1932, an increase of 47 over the number reporting in 1931. They reported a gross value of production of \$274,411,736, a decline of \$42,746,934 or 13.5 p.c. from the previous year. This, however, was caused largely by the lower values of raw materials and finished products, for the index of the volume of production declined only by 4.6 p.c., having dropped from 103.2 in 1931 to 98.5 in 1932. (In this instance 1926 as 100 is the base year.) The amount of capital invested in 1932 totalled \$321,593,062, a decrease of \$30,751,011 or 8.7 p.c. There were 102,116 persons employed who were paid \$82,817,944 in salaries and wages and in comparison with 1931 these figures represent decreases of 3,357 or 3.2 p.c. in the number of persons employed and \$9,686,144 or 10.5 p.c. in the amount of salaries and wages paid. The cost of raw and other materials used dropped to \$129,468,738, a loss of \$23,722,637 or 15.5 p.c., while the value added by manufacture, *viz.*, \$144,942,998, declined by \$19,024,297 or 11.6 p.c.

**Wood and Paper.**—The forests of Canada have always been an important factor in the building up and maintaining of manufacturing industries. Since early

pioneering times the sawmill has formed one of the first steps from the pioneering community to the industrial centre. There is to-day practically no form of industrial activity in which wood is not used directly as a raw material or indirectly as, for example, in the form of paper. The primary operations in the woods provide work for at least 200,000 individuals, largely during a part of the year when employment in manufacturing industries is at its minimum, and have a valuable steadying effect on general labour conditions throughout the year.

The manufacture of lumber, which depends to a large extent on building and construction operations and the export markets, has shown wide fluctuations. The peak, reached in 1911 with a total cut of 4,918,000 M ft. b.m. has never been equalled. It was followed by a general decline to the 2,869,000 M ft. reported for 1921. Production then increased with fair regularity to a second peak in 1929 of 4,742,000 M ft. Production since 1929 has decreased annually to the 1,810,000 M ft. reported in 1932.

The manufacturing industries which draw their principal raw material from the sawmills reached their maximum production in 1929 with a gross value of \$146,950,000 and then declined to \$60,234,000 in 1932.

The pulp and paper industry is a comparatively recent development in Canadian industry. In 1881 there were only 36 paper and 5 pulp mills in operation in Canada. By 1923 the industry had displaced flour milling as Canada's most important manufacturing industry and in spite of recent vicissitudes has held that position ever since. The peak of production was reached in 1929 when 4,021,000 tons of wood pulp and 3,197,000 tons of paper were produced. In that year there were 108 pulp and paper mills in operation, consuming 5,278,000 cords of pulpwood and using hydro-electric power valued at more than \$13,000,000. During 1926, Canada, for the first time, produced more newsprint paper than the United States and became the world's chief producer and exporter of that commodity; she has maintained that position ever since in spite of decreases in production. During 1932 this industry produced 2,663,000 tons of pulp and 2,291,000 tons of paper. Of this paper 1,919,000 tons was newsprint and exceeded the production of the United States by over 104 p.c.

The manufacturing industries which draw their principal raw material from the pulp and paper mills reached their maximum production of \$187,882,000 in 1929. The value in 1932 for these industries was \$135,212,000.

**Iron and Its Products.**—The manufacture of iron and steel and their products is one of Canada's basic industries. Iron ore is not now produced in Canada, as the known deposits, though extensive, are not of sufficiently high grade to permit economic operation under present conditions. Yet there has been built up a primary steel industry of considerable importance, and the secondary or fabricating industries have been expanding steadily to meet the country's increasing requirements.

There are now four concerns which make pig iron in Canada, one being in Nova Scotia and three in Ontario. The former uses Nova Scotia coal and iron ore from the great Wabana deposits which it controls, on Bell island, Newfoundland, while the Ontario works are dependent on ore and coal brought from the United States. These companies have 11 blast furnaces with a total rated capacity of 1.5 million long tons of pig iron per annum, but the highest tonnage yet attained was 1,080,160 long tons in 1929. Open hearth steel furnaces and rolling-mills are also operated by these companies, which produce steel ingots, blooms and billets, bars, rods, rails, structural shapes, plates, sheets, rail fastenings, etc. Including electric

steel furnaces, there were 28 steel plants in operation in 1932, which, with the 19 rolling-mills, 4 pig-iron plants and 2 ferro-alloy plants, represented a capital of \$96,323,629 and employed 4,847 hands to produce primary products worth \$16,197,526. This output value was much below normal and in fact was the lowest recorded since the Bureau commenced to collect annual statistics in 1918. The value for 1931 was \$36,911,245, for 1930, \$52,588,935 and for 1929, \$72,231,995.

Automobile manufacturing was the most important of the secondary iron and steel industries in 1932, although the production value of \$43,801,389 was the lowest on record for the industry. Seventeen companies manufactured or assembled motor cars in Canada in 1932 and 25 separate factories were in operation. The capacity of these plants was reported at 340,000 automobiles and 32,000 trucks annually, from which it is calculated that the industry operated at about 16 p.c. of capacity during 1932, when only 60,789 cars were produced. In 1929, the year of highest production, the plants operated at 66 p.c. of their estimated capacity. Production in 1929 totalled 262,625 cars at \$163,497,675; in 1930 the output was 153,372 cars at \$91,766,806, and in 1931, 82,559 cars at \$52,964,936. Exports of automobiles and parts declined from \$47,005,671 in 1929 to \$20,386,354 in 1930 and to \$7,091,994 in 1932.

There are also numerous works in Canada for the manufacture of machinery, agricultural implements, railway rolling-stock, automobile parts, boilers and engines, castings and forgings, sheet-metal products, hardware and tools, wire and wire goods, etc., and the variety of products made in these establishments is increasing yearly.

The iron and steel industries, which are engaged almost entirely in the production of capital goods, have been severely affected by the depressed economic conditions of the past few years. In 1932, the 1,233 operating factories reported production valued at only \$225,832,185 compared with \$374,725,068 in 1931, \$569,745,973 in 1930 and \$738,012,980 in 1929.

**Non-Ferrous Metals.**—Production from this group of manufactures, which includes non-ferrous smelters and refineries, electrical equipment factories, brass foundries, etc., has declined considerably during the past two years. Output in 1932 was valued at \$152,111,317 or 28 p.c. below the 1931 value of \$211,862,412 and 39 p.c. below the total of \$250,458,721 in 1930. Capital employed in the 452 operating factories in 1932 was reported at \$272,045,441 and the number of employees was given at 26,704.

The smelting and refining of non-ferrous metals was the leading industry of the group in 1932. Thirteen plants were operated in that year by 10 different companies and products were valued at \$76,442,076. Capital employed amounted to \$149,708,860 and the average number of workers was 5,343. Products included aluminium, nickel, cobalt, copper, zinc, lead, silver, gold, bismuth, cadmium, selenium, radium and other refinery products. Output in 1932 was 22 p.c. lower than in 1931 and 30 p.c. lower than in 1929, the record year.

The electrical apparatus industry also showed a considerable decline in 1932, due chiefly to the poor demand for heavy electrical machinery, wire and cable, and radios. Output in 1932 totalled \$53,264,918 compared with \$81,578,595 in 1931 and \$104,577,790 in 1930. Radio production alone dropped from 291,711 sets at \$18,555,710 in 1931 to 121,468 sets at \$6,808,877 in 1932.

Jewellery, silverware, white metal alloys, aluminium utensils, and brass and copper goods were the other important products made in factories in this group.

**Non-Metallic Minerals.**—This group of manufactures includes such leading industries as coke making, oil refining, the manufacture of glass, artificial abrasives, bricks, cement, etc. Final figures for 1932 show that the output for this group amounted in value to \$147,765,618, which is 18.6 p.c. below the corresponding total for 1931 and 32 p.c. below 1930.

The petroleum-refining industry is by far the largest of the group. Canada produces some crude oil, but the bulk of the oil treated in Canadian refineries is imported from United States or South America. In 1932 there were 24 refineries operating at advantageous points across the Dominion. The industry used 930,114,055 gallons of crude oil in that year and produced refined commodities worth \$71,697,757. About 4,116 people were given employment and the capital investment was \$69,475,860.

**Chemicals and Allied Products.**—That chemical manufactures occupy an important place in Canadian industry is obvious from the fact that in 1932 a total of 15,295 persons were employed in the 662 plants which made chemicals and allied products. These plants produce the greater part of the chemicals that are consumed in this country. In 1932 the apparent consumption of chemicals and allied products amounted in value to \$109,364,452, of which \$95,279,376 or 87 p.c. was of domestic manufacture.

Chemicals and like products of great diversity are made in Canada, but paints, soaps, medicines, acids and chemical salts are most important. Production from the 14 plants in the heavy chemical industry, which represented a capital of \$44,067,194, amounted to \$11,357,649 in 1932, while in 1929 it was \$28,021,972. Acetic acid, calcium cyanamide, sodium cyanide, caustic soda, soda ash, sulphuric acid, phosphorus, calcium carbide and nitre cake are among the leading products. The export trade in these commodities amounted to about \$11,000,000 in 1932.

The medicinal and pharmaceutical preparations industry employed 2,959 workers in 1932 and paid \$3,833,778 in salaries and wages. Production in that year was valued at \$17,573,979. The paints industry was next in importance, there being 71 factories in this line of manufacture, with output worth \$14,912,383. The production of soaps and cleaning preparations was worth \$14,739,158 and 1,777 people worked in the 85 factories in this industry. The heavy chemical industry employed 1,679 workers in 14 plants to produce acids, alkalies and salts valued at \$11,357,649. Compressed gases, fertilizers, coal-tar products, wood-distillation products, inks, adhesives, polishes, and a multitude of other such products are also made in the chemical plants.

Many chemical products are also made in industries which for statistical purposes are not included in the chemicals and allied products group. For instance, pulp and paper, distilled liquors, brewery products and artificial abrasives are classified in other groups. By extending the scope of the chemical industry to include these other factories, which primarily use chemical processes, approximately 70,000 workers would be employed and production would total over \$425,000,000.

**Central Electric Stations.**—This industry is shown under the totals by groups in Table 7 as a separate group in order to facilitate the presentation of statistics of power installed in the other groups and industries. (See also pp. 427-430.)

The principal statistics of each of the manufacturing industries of Canada during 1932 are presented in Table 7 on pp. 462 to 467.

## 7.—Statistics of the Numbers, Capital, Employees, Salaries and Wages, Power, Fuel,

| No. | Group and Kind of Industry.              | Establishments. | Capital Employed.    | Salaried Employees. |               |                    |
|-----|------------------------------------------|-----------------|----------------------|---------------------|---------------|--------------------|

### Subsection 2.—Manufactures Classified by the Purpose of the Products.

**Production of Manufactured Goods According to the Purpose Classification.**—In addition to the classification according to the chief component material of the products, used for the industrial census in detailed presentation, a separate and distinct classification, based on the chief purpose of the products, was applied for the first time to the census returns of 1922 and is presented in Table 8 for the years 1922, 1924, 1927, 1929, 1930 and 1931 in summary form, and for 1932 in more detail.

During the period covered by this table, the gross production of the food industries dropped from 27·1 p.c. of the total for all industries in 1922 to 23·2 p.c. in 1932, while the "drink and tobacco" group during the same period rose from 4·0 p.c. to 5·0 p.c. On the other hand, the percentage of the "clothing" group remained about the same, being 9·5 p.c. in 1922 and 10·0 p.c. in 1932. The "industrial equipment" and "books and stationery" groups advanced respectively from 17·0 p.c. and 4·0 p.c. in 1922 to 20·1 p.c. and 5·3 p.c. The following groups, however, declined in importance: the "producers' materials" group dropped from 26·8 p.c. to 25·8 p.c.; "vehicles and vessels" from 6·5 p.c. to 6·0 p.c.; "house furnishings" from 2·6 p.c. to 2·0 p.c.; and "personal utilities" from 2·3 p.c. to 1·7 p.c.

In analysing the relative standing of the two groups which are perhaps of the greatest interest, it is noted that the gross production of the "food" industries in 1932 was 23·2 p.c. of the output of Canadian manufactures, as compared with an output of only 10·0 p.c. for the "clothing" industries. Aside from the fact that a much larger proportion of its products is exported, the greater production of the "food" group was in part due to the higher cost of raw materials, the value added by manufacture being 16·2 p.c. of the total for all industries in the case of the "food" group and 9·4 p.c. for the "clothing" group. The "clothing" industries also gave employment to 11,021 more persons than the "food" industries, but paid out \$2,276,685 less in salaries and wages.

### 8.—Principal Statistics of the Manufacturing Industries of Canada, Classified According to the Purpose of the Principal Product, by Main Groups for Representative Years 1922-32, and in Detail for 1932.

| Purpose Heading.         | Estab-lish-ments. | Capital.             | Em-ployees     | Salaries and Wages. | Cost of Materials.   | Net Value of Products. | Gross Value of Products. |

### Subsection 3.—Manufactures Classified by Origin of the Materials.

**Classification of Manufacturing Production According to the Origin of the Materials Worked Upon.**—The principal statistics of the manufactures of Canada, classified upon the basis of "origin", are presented in Table 9 for the years 1924, 1927, 1929, 1930, 1931 and 1932. By this means Canadian manufacturing production may be analysed from a new angle, one by means of which interesting comparisons may be made with the external trade classification according to origin.

The distinction made between farm materials of Canadian and foreign origin is based on whether the materials are indigenous to Canada rather than their actual source. Thus, the industries included in the foreign origin classes are those depending upon materials which cannot be grown in Canada such as tea, coffee, spices, cane sugar, rice, rubber, cotton, etc., but it should be understood that industries included in the Canadian origin classes may be using large quantities of imported corn, fruit, tobacco, hides, wool, etc.

While the period reviewed in the following table only covers the short space of the 9 years from 1924 to 1932, interesting changes have taken place in the relative importance of the industries based on materials from the different origins. Since the purpose of such a comparison is to discover the relative importance of the manufacturing work done upon materials from the different origins, the figures of net value of products or the value added to the raw materials by the manufacturing processes will give a more accurate measure of the importance of the industrial groups than the figures of gross value of products.

The values added in the manufacture of materials of farm origin represented 30·8 p.c. of the total value added by manufacture in all industries. This group remained stationary, having advanced but 0·1 p.c. since 1924. The second largest group from the point of view of value added is that of mineral origin which accounted for 28·7 p.c. of the total value in 1932. This group, however, rose in importance, having increased 6·9 p.c. since 1924. The values added by the industries of the forest group which are third in importance declined from 23·8 p.c. of the total in 1924 to 18·9 p.c. in 1932. This was the greatest decline of any group. On the other hand, central electric stations bettered their position, the percentages of the totals being 7·6 in 1924 and 11·0 in 1932. The increase during the period under review in the relative importance of the industries of the mineral group was probably due to a number of influences. The expansion of the motor vehicle industry, the rapid growth in the use of electrical equipment, increasing activity in construction which absorbed large quantities of steel, cement and various other manufactured mineral products, and the development of metallurgical plants in Canada were some factors in the growing importance of the mineral group of industries. Another factor in this trend has been the growing appreciation and development of the wealth of the mineral resources of Canada. Not only have the various mining activities made the raw materials for mineral industries more readily available, but those activities have also required large quantities of machinery, electrical apparatus and other finished products of mineral origin.

In the year 1932, the industries of the farm group exceeded those of any other group in the net value of products with 30.8 p.c. of the total, as compared with 28.7 p.c. for the mineral and 18.9 p.c. for the forest origin groups. These three principal groups stood in the same order of importance with regard to employees engaged, but as regards salaries and wages paid, the mineral group came first, followed by the farm and forest products groups respectively. In the matter of capital invested the mineral group also led with 28.5 p.c. of the total, followed by central electric stations with 28.2 p.c., the forest group with 19.9 p.c., and the farm group with 18.3 p.c.

**9.—Principal Statistics of the Manufacturing Industries of Canada, Classified According to the Origin of the Material Used, by Main Groups for Representative Years 1924-32.**

| Origin.                         | Estab-lish-ments. | Capital.             | Em-ployees.    | Salaries and Wages. | Cost of Materials.   | Net Value of Products. | Gross Value of Products. |

**Subsection 4.—The Forty Leading Manufacturing Industries.**

There was a number of significant changes in the ranking of the ten leading industries in 1932, aside from the appreciable decreases in production, employment, etc. Tables 10, 11 and 12 which follow show the forty leading industries for 1932 ranked according to the gross value of products, the net value of products, and the salaries and wages paid, respectively.

**The Forty Leading Industries in 1933.**—The completion of part of the compilation of the Census of Manufactures for 1933 permits of the inclusion as Table 10A of the forty leading industries classified according to gross value of production for that year. In the following statement the ten leading industries for 1933 are compared as to their respective ranks in 1933, 1932 and 1931:—

**THE TEN LEADING INDUSTRIES, 1933, COMPARED AS TO RANK FOR THE YEARS 1933, 1932 AND 1931.**

| Industry.                            | Rank in<br>1933. | Rank in<br>1932. | Rank in<br>1931. |
|--------------------------------------|------------------|------------------|------------------|
| Pulp and paper.....                  | 1                | 1                | 1                |
| Central electric stations.....       | 2                | 2                | 2                |
| Non-ferrous metal smelting.....      | 3                | 6                | 4                |
| Slaughtering and meat packing.....   | 4                | 3                | 3                |
| Flour and feed mills.....            | 5                | 4                | 5                |
| Butter and cheese.....               | 6                | 5                | 6                |
| Petroleum products.....              | 7                | 7                | 8                |
| Bread and other bakery products..... | 8                | 9                | 12               |
| Cotton yarn and cloth.....           | 9                | 16               | 22               |
| Printing and publishing.....         | 10               | 8                | 11               |

The outstanding change has been in the cotton yarn and cloth industry which was in twenty-second place in 1931, sixteenth in 1932 and has taken ninth place in 1933, having displaced the railway rolling-stock industry which was in tenth place in 1931 but is now in twenty-fourth (see Table 10A).

**19.—Principal Statistics of the Forty Leading Industries of Canada, Ranked According to Gross Value of the Products, 1932.**

| No.                                                                             | Industry.                                                | Estab-<br>lish-<br>ments. | Capital.             | Em-<br>ployees. | Salaries<br>and<br>Wages. | Cost<br>of<br>Materials. | Value of Products.   |                      |
|---------------------------------------------------------------------------------|----------------------------------------------------------|---------------------------|----------------------|-----------------|---------------------------|--------------------------|----------------------|----------------------|

### Section 3.—Provincial Distribution of Manufacturing Production.

Ontario and Quebec are the most important manufacturing provinces of Canada. Their combined production in 1932 amounted to \$1,696,000,000, or nearly 80 p.c. of the gross value of manufactured products of the Dominion. Of this amount Ontario contributed \$1,028,000,000 and Quebec \$668,000,000. The proximity of Ontario to the coal fields of Pennsylvania, the water-power resources of the two provinces and their nearness to the larger markets of Canada and the United States have all contributed to the above result. British Columbia had in 1932 the third largest gross manufacturing production, \$141,000,000, and Manitoba the fourth, \$96,000,000. Alberta, Nova Scotia, New Brunswick and Saskatchewan followed in the order named, with gross production ranging from \$55,000,000 to \$36,000,000, succeeded by Prince Edward Island with \$3,567,000.

#### Subsection 1.—The Manufactures of the Maritime Provinces, 1932.

Table 13 gives the statistics of the leading industries of each of the Maritime Provinces for the year 1932. In Prince Edward Island, fish canning and curing with a gross production of \$833,055, was foremost, followed by butter and cheese, central electric stations, slaughtering and meatpacking, etc. Manufacturing in Nova Scotia and New Brunswick is, of course, to a considerable extent dominated by the steel industry in the former and the forest industries in the latter, although there is a large sugar refinery in each province. The pulp and paper industry, with a gross value of production of \$12,823,270 in 1932, was the most important industry in New Brunswick, followed by central electric stations with an output of \$3,340,257 and sawmills with an output of \$2,208,916. These three industries combined provided nearly 40 p.c. of the gross manufacturing production of the province. In Nova Scotia, fish canning and curing with an output valued at \$4,633,955, was the leading industry in 1932. Usually the primary iron and steel industry is of chief importance in Nova Scotia but, in 1932, due to the same economic conditions which so seriously affected this industry elsewhere in Canada, it dropped to fourth place. Other leading industries were: central electric stations, pulp and paper, butter and cheese, etc.

#### 13.—Statistics of the Leading Industries of each of the Maritime Provinces, 1932.

NOTE.—Other leading industries, statistics of which cannot be given because there are fewer than three establishments in each industry, are: in Prince Edward Island, castings and forgings, and railway rolling-stock; in Nova Scotia, petroleum, sugar refineries, breweries, and coke and gas products; in New Brunswick, sugar refineries, soaps and washing compounds, and railway rolling-stock. The statistics for these industries are included in the item "all other leading industries".

<sup>1</sup>Read headnote to this table on p. 479.

### Subsection 2.—The Manufactures of Quebec, 1932.

The pulp and paper mills of Quebec, the most important manufacturing unit of the province, produced goods with a selling value at the factory of \$63,317,497 in 1932. This exceeded by nearly \$19,000,000 the gross value of products of central electric stations (\$44,720,404), the industry which ranks second in importance. This was followed by non-ferrous metal smelting and refining (\$35,141,813), tobacco, cigars and cigarettes (\$31,923,004), cotton yarn and cloth (\$26,974,004), women's factory clothing (\$23,193,839), boots and shoes (\$18,635,509), petroleum products (\$18,241,142), etc. A change took place in the ranking of some of the important industries of the province. The non-ferrous metal smelting and refining industry advanced from eighth place in 1930 to third place in 1932, while sawmills dropped from fifth to twenty-first place. Compared with 1931, the petroleum products industry advanced from fifteenth to eighth place, the silk industry also advanced from twenty-first to fourteenth place while railway rolling-stock dropped from sixth to fifteenth place.

The importance of the pulp and paper industry in Quebec is shown by a comparison with the industry throughout Canada. The Quebec section of the industry, in addition to supplying about ten per cent of the total gross value of all products manufactured in the province, furnished 47 p.c. of the products of pulp and paper mills throughout the country. The gross value of cotton yarn and cloth products from Quebec mills formed 70 p.c., the value of railway rolling-stock 40 p.c., the value of tobacco, cigars and cigarettes 85 p.c., and the value of boots and shoes 58 p.c. of the Dominion totals for these products. Thus, Quebec is an outstanding manufacturing province rather on account of her individual industries than because of the diversification of her industrial activity.

#### 14.—Principal Statistics of the Forty Leading Industries of the Province of Quebec, 1932.

Note.—Statistics for sugar refining, which is also one of the leading industries of this province, cannot be published because there are fewer than three establishments reporting.

| No.                                                                                                  | Industry.                                            | Estab-<br>lish-<br>ments. | Capital.             | Em-<br>ployees. | Salaries<br>and<br>Wages. | Cost<br>of<br>Materials. | Gross<br>Value<br>of<br>Products. |

### Subsection 3.—The Manufactures of Ontario, 1932.

Ontario is the most important manufacturing province of the Dominion. The gross value of its manufactured products in 1932 represented over 48 p.c. of those of the whole Dominion, while those of Quebec, the second province in importance in this respect, amounted to about 32 p.c. This premier position in manufacturing has been fairly uniformly maintained by Ontario over a long period, as the following percentages show: in 1926, 52 p.c.; in 1918, 53 p.c.; 1910, 50 p.c.; 1900, 50 p.c.; 1890, 51 p.c., and 1880, 51 p.c. Thus, in spite of the rapid industrial development in recent years in other provinces such as Quebec, British Columbia and Manitoba, Ontario is maintaining a manufacturing production almost equal to that of the remainder of the Dominion.

Central electric stations came first in 1932 in the value of production. This amounted to \$49,952,973 as compared with \$46,547,469 for flour and feed mills, the industry which held second place. Other important industries, in descending order, with the values of their products in 1932 were: pulp and paper \$44,027,587, automobiles \$43,323,789, slaughtering and meat packing \$42,809,535, electrical apparatus and supplies \$39,830,967, butter and cheese \$39,085,773. Due to the general depression still prevailing during 1932, the leading industries of Ontario, in common with many others, reported considerable decreases in the gross values of production, as compared with the previous year. The output of the electrical apparatus industry declined \$24,000,000, non-ferrous metal smelting and refining \$19,000,000, castings and forgings \$15,000,000, automobiles \$14,000,000, slaughtering and meat packing \$14,000,000, pulp and paper \$9,000,000 and rubber goods \$9,000,000. An important change took place in the ranking of some of the leading industries. Automobiles, which for a number of years ranked as the premier industry of Ontario, declined to fourth place in 1932, while electrical apparatus and supplies, which ranked first in 1931, dropped to sixth place in 1932. Central electric stations on the other hand advanced from sixth place in 1931 to first place in 1932.

Indicating the greater diversification of industry in Ontario as compared with Quebec, the percentages which the forty leading industries bore to the total manufactures of the province were higher in nearly every particular in Quebec than in Ontario, especially in the capital employed and the number of establishments and employees. Outstanding among the industries in which the province of Ontario was pre-eminent, was that of automobile manufacturing, which was carried on practically in this province alone. Other important industries in which Ontario led, with the percentage which the production of each bore to that of the Dominion in 1932, were as follows: agricultural implements, 93 p.c.; leather tanneries, 86 p.c.; rubber goods, 80 p.c.; furniture and upholstering, 70 p.c.; fruit and vegetable canning, preserving, etc., 70 p.c.; electrical apparatus and supplies, 75 p.c.; castings and forgings, 61 p.c.; primary iron and steel, 63 p.c.; slaughtering and meat packing, 47 p.c.; flour and feed mills, 55 p.c.; hosiery and knitted goods, 66 p.c.

## 15.—Principal Statistics of the Forty Leading Industries of the Province of Ontario, 1932.

## Subsection 4.—The Manufactures of the Prairie Provinces, 1932.

The flour and feed milling industry in 1932 was outstanding among the manufactures of the Prairie Provinces when treated as a single unit. During 1932, as may be seen from Table 16, the gross value of production of flour and feed mills was \$24,246,761 (Manitoba \$6,443,072, Saskatchewan \$9,468,912 and Alberta \$8,334,777). The second industry from the point of view of gross value of production was slaughtering and meat packing, with products valued at \$23,704,599

(Manitoba \$13,011,468, Saskatchewan \$2,256,091 and Alberta \$8,437,040). Butter and cheese comprised the third largest group, with an output valued at \$15,754,928, followed by central electric stations \$15,693,275, railway rolling-stock \$12,014,633, petroleum products \$11,058,020, etc.

The order of the leading industries is somewhat different in each province. In Manitoba, the leading industries, with their gross values of products in 1932, were as follows: slaughtering and meat packing \$13,011,468, railway rolling-stock \$8,936,011, central electric stations \$6,534,141, flour and feed mills \$6,443,072 and butter and cheese \$6,239,213. In Saskatchewan the leading industries were: flour and feed mills \$9,468,912, petroleum products \$5,694,731, butter and cheese \$5,000,690 and central electric stations \$4,478,110. In Alberta, slaughtering and meat packing, with an output of \$8,437,040, was the leading industry. This was followed by flour and feed mills \$8,334,777, petroleum products \$5,363,289, central electric stations \$4,681,024 and butter and cheese \$4,515,025.

The importance of these industries, based on such natural resources of the Prairie Provinces as grain-growing and cattle-raising areas, is evident.

#### 16.—Principal Statistics of the Leading Industries of Manitoba, Saskatchewan and Alberta, 1932.

NOTE.—Other leading industries, statistics of which cannot be given because there are fewer than three establishments in each industry, are: in Manitoba, non-ferrous metal smelting and refining and, in Alberta, sugar refining and wood preservation. The statistics of these industries are included under the heading "all other leading industries" in the case of Alberta.

<sup>1</sup> Read headnote to this table on p. 484.

## Subsection 5.—The Manufactures of British Columbia\*, 1932.

British Columbia was, in 1932, the third most important manufacturing province in the Dominion, producing goods to a gross value of \$140,538,016. About 13 p.c. of this production, or \$17,729,397, is seen in Table 17 to be that of the sawmilling industry; the predominance of forest products industries in the industrial life of the province is still further emphasized if to this figure be added \$11,056,236, the value of products of the pulp and paper industry which ranks second. Third in importance among the industries of British Columbia is central electric stations, with a gross value of production of \$10,082,357. This was followed by fish curing and packing \$9,085,834, petroleum products \$7,182,495, slaughtering and meat packing \$6,001,923. Fish curing and packing, which usually ranks as the second industry, declined to fourth place in 1932.

\*Including the Yukon Territory.

<sup>1</sup>Includes condensed milk, distilleries, fertilizers, sugar refineries and non-ferrous metal smelting and refining.

## Section 4.—Principal Factors in Manufacturing Production.

### Subsection 1.—Capital Employed.

In a retrospective study of capital employed in Canadian manufactures since 1900, the remarkable increase denotes rapid growth in industrial operations. From 1900 to 1905 the capital increased from \$446,900,000 to \$833,900,000, and advanced to \$1,958,700,000 in 1915. During this period returns were received from establishments with 5 hands and over, and while the rise in wholesale prices did not exceed 37 p.c., the capital employed in manufactures increased nearly 340 p.c.

The capital investment in 1932, in all establishments irrespective of the number of employees, was \$4,741,255,610 as compared with \$4,961,312,408 in 1931 and with \$2,696,154,030 in 1917, an increase of 76 p.c. in 15 years.

The provincial distribution of the manufactures of Canada may be illustrated by the investment of capital. Capital employed in Ontario was 48.3 p.c. of the total in 1917, 52.4 p.c. in 1923 and 45.2 p.c. in 1932. The percentages employed in the plants of Quebec were: 29.4 in 1917, 29.8 in 1923 and 34.4 in 1932. British Columbia held third place in 1932 with a capital investment of 7.7 p.c. of the total, while Manitoba, Nova Scotia, New Brunswick, Alberta and Saskatchewan followed in the order named, with proportions varying between 4.0 p.c. and 1.3 p.c. (Table 18.)

From a survey of the industrial groups in which the capital of the country is invested, it appears that the central electric stations industry led, in 1932, with an investment of 28.2 p.c. of the total. The wood and paper group was second with 20.1 p.c., the iron and its products group third with 12.8 p.c. and the vegetable products group fourth with 10.9 p.c. Up to 1931 the wood and paper group had long been first in the amount of capital employed, but in that year the central electric stations group assumed the premier position. (Table 18.)

The statistics of capital employed in the manufacturing industries are of interest in deducing the proportions of fixed and liquid assets. In 1923, land, buildings, machinery and tools constituted 64 p.c. of the total capital, while in 1929 the proportion had increased to 66 p.c. and in 1932 to 74 p.c. The fixed assets amounted to \$3,511,904,606 in 1932, while current assets, including inventories of raw materials and finished products, bills and accounts receivable, cash and sundries, were valued at \$1,229,351,004. Details by provinces and industrial groups are given in Table 19.

Subsection 2.—Employment in Manufactures.

The total number of persons employed in the manufacturing industries of Canada, according to the statistics collected for 1932, was 495,398, as compared with 557,426 in all such industries in 1931 and 694,434 in 1929. The 1932 employees included 95,070 salaried employees, this figure being obtained from the manufacturers at the end of the year, and 400,328 wage-earners, the average number employed as derived from the manufacturers' records of the numbers on the pay-rolls on the 15th of each of the twelve months. Prior to 1925, the number of wage-earners was computed as the sum of the number recorded each month divided by 12, whether the establishment was operating the 12 months or not. Beginning with the statistics for 1925, in seasonal industries which are in operation only a limited number of months in each year, such as sawmilling, fruit and vegetable canning, etc., the average was computed by dividing the sum of the wage-earners reported on the 15th of each month by the number of months in operation. This change of method increased the apparent number of employees, not only in seasonal industries but

also in the groups containing such seasonal industries and in provincial and Dominion totals. Consequently, the change of method exerted a reducing influence on apparent average wages and on all other averages per wage-earner and per employee. In 1931, however, the former method of computing the average number of wage-earners was again adopted. A change was also made in the compilation of the number of salaried employees. Prior to 1931, owners who were working as ordinary wage-earners, such as small bakers, reported themselves as wage-earners. In 1931, however, all such owners were required to report themselves as salaried employees. In 1931, also, travelling salesmen who were attached to the plant and devoted all or the greater part of their time in selling the products of that plant were included with salaried employees. Prior to this they were not reported at all. These changes, therefore, explain the apparent increase in the number of salaried employees in 1931 as compared with the previous year. This apparent increase was offset in part by a corresponding decrease in the number of wage-earners. Actually there was a decrease in salaried employees.

The number of salaried employees and of wage-earners, as thus ascertained, is given for each of the years since 1917, the year of the first annual census of manufacturing production, in Table 20. Then, taking the percentages of the wage-earners and the total employees in each year to those of 1917, and dividing these percentages into the volume of manufacturing production in each year (see pp. 450 to 453 for the index of volume), the quotients give tentative conclusions regarding the efficiency of production per wage-earner and per employee in years subsequent to 1917, as compared with that year. Since central electric stations were excluded in computing the index of the volume of production, employees in these establishments have been excluded also in computing the percentages relative to 1917 for both wage-earners and total employees, and consequently from the indexes of efficiency of production. These indexes of the efficiency of production are, of course, affected by the changes in the method of computing the number of employees adopted in 1925 and then again in 1931. Inasmuch as the change increased the apparent number of employees between 1925 and 1930, it proportionately decreased the index of the efficiency of production. The table illustrates the development of modern industry which has been able to raise real wages through a large increase in production per wage-earner, accomplished by better organization and the use of improved equipment. Capital invested in manufacturing industries, exclusive of central electric stations, has increased by 45.0 p. c., from 1917 to 1932, compared with a decrease of 28.5 p. c. in wage-earners, while the horse-power used per wage-earner has increased from about 3 in 1917 to 11 in 1932. The factor of better organization is not susceptible of measurement. However, salaried employees have increased by 35.2 p. c. since 1917, or more nearly in proportion to the growth in production than have wage-earners. The result of these developments has been the increase of 46.9 p. c. in the volume of production per wage-earner and a smaller increase of 34.1 p. c. per employee, owing to the increased proportion of salaried employees in the total. The indexes may be considered as supplying satisfactory evidence of a general gain in volume of production per person employed. In this connection it should be remembered, however, that in 1917, owing to the large numbers overseas, many persons of low efficiency were being employed, their inefficiency being concealed at the time by the prevailing inflation of prices; it is possible that the sudden rise in the indexes of efficiency from 1920 and 1921 may be partly accounted for by their elimination in the contraction of industrial operations which occurred at that time.

**20.—Salaried Employees and Wage-Earners in the Manufacturing Industries of Canada, with Volume of Manufacturing Production and Comparative Efficiency of Production, 1917-32.**

Note.—Employees of Central Electric Stations are excluded in this table since factors of production and efficiency for that industry are not representative and would vitiate the result.

| Year.     | Salaried Employees. | Wage-Earners. | Total Employees. | Percentage relative to 1917. |                     | Index Number of Volume of Mfd. Products. | Efficiency of Production. |               |
|-----------|---------------------|---------------|------------------|------------------------------|---------------------|------------------------------------------|---------------------------|---------------|

| 1932..... | 88,434              | 391,569       | 480,003          | 71.5                         | 78.3                | 105.0                                    | 146.9                     | 134.1         |

Statistics of employment in manufacturing industries during 1932 derived from the Census of Manufactures, are shown in Table 7 of this chapter (pp. 462 to 467). According to these statistics, the 24,544 establishments covered, employed 95,070 salaried employees and 400,328 wage-earners, a total of 495,398 persons. Out of every 1,000 persons employed in manufacturing, 192 were classed as salary-earners and 808 as wage-earners; the former earned 32.5 p.c. and the latter 67.5 p.c. of the total amount paid out as remuneration for services.

**Distribution of Employees in 1932.**—An analysis of the returns by provinces shows that 48,228 or 50.7 p.c. of all the employees on salaries were employed in Ontario; of this number 36,312 were males and 11,916 were females. The province of Quebec, with 27,543 persons or 29.0 p.c. of the total, recorded the second largest number of salaried workers; of these 22,298 were males and 5,245 were females. British Columbia ranked third with 5,700 or 6.0 p.c. of the total salaried employees.

Of the wage-earners employed, who numbered 400,328, 47.7 p.c. were employed in Ontario, 33.5 p.c. in Quebec and 5.9 p.c. in British Columbia. It is also interesting to note that out of every 1,000 salaried employees 218 were females, while in the case of wage-earners, 247 out of every 1,000 were females. (See Tables 21 and 25.)

The wood and paper industries with 23,437 salaried employees reported a larger number than any other group, having 24.6 p.c. of the total. The vegetable products group came next with 14,305 salaried employees or 15.1 p.c. of the total. The textile industries gave employment to a proportionately greater number of female salaried employees than any other group. Out of every 1,000 salaried employees in this group 323 were females, as compared with only 205 for all the other groups.

In the number of wage-earners employed, the textile industries came first with 91,559 or 22.9 p.c. of the total. This was closely followed by the wood and paper products group with 84,397 wage-earners or 21.1 p.c. of the total. It is of interest to note that out of every 1,000 wage-earners in the textile industries 578 were females,

while in all the other groups only 149 were females. The importance of the textile industries in providing employment for females is strikingly illustrated by the fact that out of all female employees engaged in the manufacturing industries of Canada, 47.1 p.c. were found in the textile group.

**21.—Percentages of Male and Female Employees on Salaries and Wages and Percentages of Total Salaries and Wages, by Provinces and Groups of Industries, 1932.**

NOTE.—For actual figures see Table 25, p. 496.

| Province or Group.                 | Employees on Salaries. |              |              | Salaries.    | Employees on Wages. |              |              | Wages.       |

**Monthly Record of Employment in Manufactures.**—A monthly record of the number of wage-earners employed in Canadian manufactures, as compiled from the Census of Industry, is given in Table 22 for the years 1922 to 1932 and by sex for 1922 and 1932. Ordinarily, manufacturing employment in Canada reaches its highest point during the summer months. Some of the seasonal industries, such as canning, are most active then, textile industries are preparing winter goods and industry generally feels the active demand of the agricultural purchasing power resulting from the prospects of the season's harvest. In 1929, however, the rising tide of "good times" was checked about midsummer and then the recession set in during the autumn with the stock market crash. Employment during 1930, 1931 and 1932 declined steadily, the monthly employment figures in each case being lower than the corresponding month of the previous year. The peak of employment was reached in June, 1929, when 596,544 wage-earners were on the payrolls. This compares with the peak month in 1930 of 556,386 wage-earners, 484,661 the peak month of 1931 and 417,685 the peak month in 1932.

**22.—Total Number of Wage-Earners Employed in the Manufacturing Industries of Canada, by Months, 1922-1932 and by Sex, 1922 and 1932.**

| Month.         | 1922.   | 1923.   | 1924.   | 1925.   | 1926.   | 1927.   |

**Hours Worked by Wage-Earners.**—Weekly hours worked by wage-earners in the month of highest employment in 1932 are shown in Tables 23 and 24 by provinces and groups and for the forty leading industries. An explanation should be made of the term "month of highest employment" as used in connection with these tables. Each firm is required to report the number of wage-earners working specified hours per week during the month in which the greatest number were employed. It therefore happens that in the case of one firm the month of highest employment might be May, while in that of another it might be October. The month of highest employment as shown in the heading of Table 23, therefore, is not any particular month, and the total number of workers is the sum of those employed in the different months of highest employment as reported by all firms. In the particular case of a given industry, however, the month of highest employment is the same for a majority of the firms operating. This would apply to some extent in the broad industrial groups in the second half of Table 23, but more particularly to the forty industries of Table 24. For Canada as a whole, 53 p.c. of the wage-earners in 1932 worked 48 hours or less, 14 p.c. worked between 49 and 50 hours and 33 p.c. worked over 50 hours per week. Average hours worked per week may also be worked out for the provinces and industrial groups and for the forty leading industries from the figures shown in the tables following.

## 23.—Wage-Earners Working Specified Numbers of Hours in the Month of Highest Employment in 1932, by Provinces and Groups.

(These are the regular hours worked per week and do not therefore include overtime.)

| Province or Group.                   | 40 hours<br>or less. | 41-43<br>hours. | 44<br>hours.  | 45-47<br>hours. | 48<br>hours.  | 49-50<br>hours. | 51-53<br>hours. | 54<br>hours.  | 55<br>hours.  | 56-59<br>hours. | 60<br>hours.  | Over<br>60 hours. |

### Subsection 3.—Wages and Salaries in Canadian Manufacturing Industries, 1932.

The total salaries and wages disbursed by manufacturers in 1932 were \$505,883,323 paid to 495,398 workers, compared with \$813,049,842 paid to 694,434 persons in 1929 and \$509,382,027 paid to 621,694 persons in 1917. Of the 1932 aggregate, \$164,695,605 or 32·5 p.c. was paid to 95,070 salaried employees who constituted 19 p.c. of the total number, while \$341,187,718 or 67·5 p.c. was paid in wages to 400,328 wage-earners, who formed 81 p.c. of the aggregate number of employees.

The average salary paid in the manufacturing industries during 1932 was \$1,732, compared with \$1,872 in 1931 and \$1,299 in 1917, while the average wage in 1932 was \$852, compared with \$957 in 1931, \$1,045 in 1929 and \$760 in 1917. Thus during the sixteen years under review average salaries increased by 33 p.c., while average wages increased only by 12 p.c. (See Tables 4 and 25.)

**Average Earnings, by Provinces and Industrial Groups.**—In 1932 Ontario showed the highest average salary of \$1,806, followed by Quebec with \$1,724, Manitoba, with \$1,685 and British Columbia with \$1,658. The head offices of many large corporations being located in Montreal, Toronto, Vancouver and Winnipeg tends to raise the average salaries in these provinces. In the other Prairie Provinces the averages were smaller, especially in Saskatchewan, while in the Maritime Provinces the average salaries were still lower, there being comparatively few large executive offices in these provinces.

British Columbia, with an average wage of \$999, ranked highest in the Dominion in 1932, being \$147 higher than the general average. In the western provinces average wages are usually higher, this being due to an unusually small proportion of women workers, while many of the male employees were engaged in the better-paid wood and paper, electric light and power industries. In the four provinces east of the Ottawa river, average wages in manufacturing were under the mean for the Dominion, while from Ontario westward the opposite was the case. The seasonal nature of some of the leading industries, notably fish-preserving and lumbering, tends to reduce the mean wage in the Maritime Provinces and Quebec, while in addition to this, Quebec has a larger proportion of female wage-earners, employed chiefly in the textile, food and tobacco industries, than any other province, except Prince Edward Island.

The highest average salary, *viz.*, \$1,988, was reported by the chemical and allied products group, while the wood and paper products group, with an average salary of \$1,373 in 1932, was the lowest. In wages paid, central electric stations came first with an average of \$1,360, there being no female wage-earners in this industry. The textile industries, on the other hand, had the lowest average wage of \$697, this being due to the fact that in this group nearly 58 p.c. of the wage-earners were females. As stated in Table 21 of this chapter, of all the female wage-earners employed in the manufacturing industries of Canada, over 53 p.c. found employment in the textile industries.

**25.—Employees on Salaries and Wages in Manufacturing Industries, 1932, and Average Salaries and Wages, by Provinces and Groups, 1931 and 1932.**

**Average Earnings in the Forty Leading Industries.**—Table 26 shows the employees by sex and average salaries and wages in the forty leading industries during 1932, and the salaries and wages in 1931. The rank of each industry is based on the aggregate of salaries and wages paid, as in Table 12 on p. 478.

In four industries only did average salaries exceed \$2,300; in seven they ranged from \$2,000 to \$2,300; in twenty-two they were from \$1,500 to \$2,000, while in only seven were they below \$1,500. None of the four industries paying the highest salaries—sugar refining \$2,906, breweries \$2,550, petroleum products \$2,375 and pulp and paper \$2,327—reported a proportion of female staff equal to the average percentage in the forty leading industries. The lowest salaries were reported by the sawmilling, bread and other bakery products, and butter and cheese industries.

The highest wages, or those above \$1,200, were paid in six industries—non-ferrous metal smelting and refining \$1,540, printing and publishing \$1,364, central electric stations \$1,360, petroleum products \$1,310, coke and gas products \$1,261 and sugar refining \$1,215—in all of which the proportion of skilled workers is probably high. In six other industries the average wage ranged between \$1,000 and \$1,200. These were largely metal-working industries, breweries, printing and bookbinding, and paints, pigments and varnishes, in all of which the proportion of women employed was low. In the remaining twenty-eight industries the average wage was below \$1,000. This last group included such seasonal industries as sawmilling and the flour and feed milling industry with a large number of small feed and grist mills in which the work is intermittent. The other industries with low average wages were textiles, tobacco and boots and shoes, in which the proportion of female wage-earners was high, the number in several industries being greater than that of the male wage-earners.

26.—Statistics of Salaries and Wages Paid in the Forty Leading Industries, 1932, together with Comparative Figures of Average Salaries and Wages Paid in 1931, and Totals and Averages Paid in Previous Representative Years.

(Industries ranked according to the aggregate salaries and wages paid as in Table 12.)

**Real Earnings of Employees in Recent Years.**—When the index number representing the average yearly wages, with 1917 as a base, is divided by the index number of the cost of living, converted to the same base, it is seen that real wages advanced by 17·9 p.c. between 1917 and 1932. The details of the computation are given in Table 27. There was little change in real wages during the three years 1917 to 1920 when prices were rising rapidly. During the following two years, 1921 and 1922, when prices dropped rapidly, real wages increased over 5 p.c. Since then there has been an almost continuous rise from year to year with the exception of 1930. In 1931 real wages reached a maximum of 120·2, declining to 117·9 in 1932.

**27.—Average Yearly Earnings and Index Numbers of Earnings and Real Wages of Wage-Earners in Manufacturing Industries, 1917-32.**

NOTE.—The figures of average earnings for the years 1931 and 1932 are strictly comparable with those for the years up to 1925 but not with those for the intervening years. The figures for the latest years as for the earliest represent the earnings for complete man-years of work, with no allowance for periods of unemployment. See footnote 1 to Table 4, p. 449.

**Percentages of Wages and Salaries to Net Values of Production.**—Table 28 shows the relation between wages and salaries paid by manufacturers and the total net value of production. Figures of gross production are often used in such calculations, but the values out of which the wages of employees must in the long run come are the values added to the raw materials while they are in the factory. Such added values constitute the real production of the manufacturing plant and are alone available for payment of wages and salaries, of interest, rent and taxes, charges for fuel, power, lighting, repairs, and all other overhead charges. The percentages of salaries were higher in the years 1921, 1922, 1924, 1931 and 1932. These were years in which manufacturing production was curtailed and it is probable that, salaried employees being a part of the organization of an industry rather than of its productive force, salaries were an abnormally high percentage of the lower level of production then prevailing. The percentage declined with the increasing manufacturing production after 1922, but in 1929 was still much higher than in 1917, while in 1930, 1931 and 1932, due to decreased industrial activity, the percentage of salaries to value added rose to 10·5, 12·7 and 14·1 respectively. It should be borne in mind, however, that salaried employees increased by 38·4 p.c. in the period, while wage-earners decreased 27·6 p.c. (Table 20). The percentage of wages has fluctuated much less than that of salaries. The number of wage-earning employees may be more readily adjusted to the activity of the industry and wage levels likewise more readily adjusted to the price levels of the products. The

percentage of wages to the values added in manufacture was thus only 2.4 p.c. lower in 1932 than in 1917. The percentage was highest in 1920, when, in the post-war inflation, average wages were highest (Table 27) and the efficiency of production lowest (Table 20).

**Subsection 4.—Sizes of Manufacturing Establishments.**

An essential characteristic of the recent evolution of industry has been the increase in the size of the typical manufacturing establishment. The full utilization of highly specialized machinery necessitates large-scale production, while the improvements in transportation have widened the market, and the development of more efficient methods of business administration has made it possible for the individual manufacturer to supervise effectively a larger plant. An increase in the scale of production of the typical manufacturing establishment has been experienced in all industrial countries which have been affected by the so-called "Industrial Revolution", and not least in Canada where the rise of the factory system in industry has taken place approximately since Confederation.

The size of the manufacturing establishment is generally measured either by the number of employees or by the value of product, but each of these methods has its limitations. The former takes no account of the differences in capital equipment at different times or in various industries, though obviously the increased use of machinery, as in the flour-milling industry, may lead to increased production concurrently with a decrease in the number of employees. The latter measure has to be adjusted for changes in the price level; and, as between industries, it makes those which handle expensive raw materials appear to operate on a larger scale. Both measures are subject to two limitations: first, they depend on the fluctuation of business activity and in times of depression there is an apparent shrinkage in the size of establishments as measured by either method; secondly, over any lengthy period of

time there is the difficulty of comparability resulting from changes in the method of the census.

Thus, while it is possible in a general way to state that the average size of the manufacturing establishment in Canada has increased between 1870 and 1932, the 1932 figures are not on the same basis as the 1870 figures, especially since they do not include all the small custom and repair establishments included at the earlier date. Some difficulties arise right up to the most recent times. In 1932, for example, due to the difficulty of eliminating duplication in the value of production in central electric stations as well as the difficulty of apportioning the capital investment as between different cities, it has been found necessary to exclude figures for central electric stations in showing statistics of size of establishment as well as in statistics of cities and towns. Except in this particular the figures for 1922 and 1932 shown in Table 29, are, however, quite comparable,

**Size as Measured by Gross Value of Products.**—In Tables 29 and 30 the size of the establishments reporting to the Census of Manufactures is shown by the gross value of products—Table 29 giving comparative figures for 1922 (the first year for which the figures are available), and 1932, and Table 30 the figures by provinces for 1932.

In 1922 the 420 establishments which had each a gross production of over \$1,000,000 had an aggregate value of products of \$1,268,056,129, or 51 p.c. of the total production of all manufacturing industries. By 1929 such establishments numbered 719 and accounted for 62 p.c. of all manufacturing production—a very significant change in the short period of seven years. However, as a result of the ensuing decline in industrial activity, by 1932 there were only 329 of such establishments and these produced goods to a value of only \$916,630,395 or 46 p.c. of the total for all industries, exclusive of central electric stations. The exclusion of this industry in 1932 no doubt reduced the number and the aggregate value of production of establishments producing over \$1,000,000 each, but it is improbable that this exclusion was responsible for lowering the proportion of that production to the total for all industries as much as was curtailed industrial activity, which resulted in many plants operating below capacity and therefore dropping into lower categories. The effect of lower prices was also considerable.

**29.—Manufacturing Establishments Grouped According to Gross Values of Products, with Total and Average Values of Products in each Class, for Canada, 1922 and 1932.**

**Size as Measured by Number of Employees**—In Tables 31 and 32 (see p. 502) the establishments reporting to the Census of Manufactures are classified by the number of their employees. In 1923, establishments employing 501 hands or over accounted for 21·4 p.c. of the total number of employees engaged in manufacturing. By 1929 they accounted for 27·3 p.c. of the total, indicating the increasing concentration of production into larger units. This tendency, however, was checked by the depression, the percentage having dropped to 21·6 (central electric stations included). The same also holds true for all establishments employing 100 hands and over. In 1923 they employed 58·6 p.c. of the total, in 1929, 61·9 p.c. and in 1932, 58·0 p.c.

### 31.—Establishments and Employees in Canadian Manufactures, Grouped According to the Number of Employees per Establishment, 1923 and 1932.

NOTE.—The total of employees in 1932, exclusive of central electric stations, exceeds the total of 480,003 given elsewhere in this report because 3,169 contract workers in the salmon canneries of British Columbia and other provinces are included here but are excluded elsewhere.

**Subsection 5.—Power and Fuel.**

**Power.**—The power equipment installed in manufacturing establishments is a very good barometer of the industrial development of Canada, inasmuch as the production is increasingly dependent on the power equipment. Increases and decreases in productive capacity, measured in horse-power, are not the result of temporary fluctuations in costs and values in the same manner as capital investments, values of products, etc. Power equipment will not reflect temporary depressions, but over a period of several years will indicate industrial growth or decline.

Central electric stations, which generate electricity for both lighting and power purposes, are treated in Table 33 separately from the other groups of industries. Internal combustion engines include all gasoline engines, natural, coal, and producer gas engines, and diesel and semi-diesel or other engines which produce power by burning the fuel in the cylinder.

The rapid increase in the development of power in Canada and in its utilization in manufacturing industries is illustrated by the summary figures for the years 1921 to 1932 in Table 33. The table is divided into two parts, the first showing manufacturing industries exclusive of central electric stations and the second showing central electric stations only. The abundance of readily available water power in many parts of Canada, facilitating the development of low-cost hydro-electric power, has no doubt played a large part in this rapid growth. Of the total primary power increase of 4,854,632 h.p., inclusive of central electric stations, in the 12 years, no less than 4,370,610 h.p. or 90 p.c. was in water power. However, some sections of Canada are not so well provided with water-power resources and chiefly in such sections primary power derived from steam engines and turbines and internal combustion engines has also increased rapidly during the period covered. In the provinces of Prince Edward Island, Nova Scotia, Saskatchewan and Alberta, primary power produced from fuels exceeded that from water in 1932. The total installation of electric motors increased 2,196,105 h.p., or 216 p.c. in the 12 years covered, by far the greatest part of this increase being in motors operated by power purchased from central electric stations.

Comparisons with the data for 1921 show an increase in 1932 of 4,854,632 h.p. or 155 p.c. in the total primary power equipment in all manufacturing establishments, including central electric stations, by far the largest increase, amounting to 4,417,114 h.p., being in central electric stations. Of this increase in central electric stations, water-power development accounted for 4,209,902 h.p., while steam power installed increased by 187,483 h.p. and internal combustion engines increased by 19,729 h.p. Provinces with large water-power developments show the greatest increases in primary power. For all manufacturing industries, including central electric stations, the province of Quebec led with an increase of 2,343,751 h.p. during the period under review. Ontario came second with an increase of 1,174,146 h.p., British Columbia third with an increase of 466,735 h.p., Manitoba fourth with 379,505 h.p., Nova Scotia fifth with 185,412 h.p., New Brunswick sixth with 131,544, etc. In the utilization of hydraulic power, Quebec exceeded Ontario for the first time in 1925. In 1927 Quebec exceeded Ontario and all other provinces in the total of installed primary power from all sources and has been the leading province since then, largely owing to its extensive water-power resources, 93 p.c. of its primary power in 1932 being derived from water.

**33.—Totals for Canada of Power Installed in the Manufacturing Industries other than Central Electric Stations and in Central Electric Stations, 1921-32, with Details by Provinces and Groups of Industries for 1932.**

MANUFACTURING INDUSTRIES (EXCLUSIVE OF CENTRAL ELECTRIC STATIONS).

| Province or Group.                | Primary Power.              |                              |                                      |                      | Electric Motors.             |                                                          |                        | Total Power Equipment Employed. |

**Fuel.**—The fuel used in industrial establishments in 1932 included 4,184,299 tons of bituminous coal valued at \$22,063,901, constituting 58.1 p.c. of the total fuel cost. The other chief fuels in order of value were: fuel oil, comprising 13.2 p.c., gas (principally manufactured gas) 12.5 p.c., anthracite coal 4.8 p.c., coke 4.3 p.c. and wood 4.1 p.c. Out of a fuel account of about \$38,000,000, Ontario expended \$18,101,434 or 47.7 p.c. of the total. The manufacturing concerns of Quebec expended \$9,688,778, British Columbia \$2,551,125 and Nova Scotia \$1,844,901.

The groups of industries in which fuel was most extensively used in 1932 were: non-metallic minerals \$8,306,496, wood and paper \$7,807,857, vegetable products \$5,668,346 and iron and its products \$5,126,028. Fuel is used quite generally throughout the industrial field for the generation of power by means of internal combustion and steam engines. The most important industries where heat is applied directly to materials to transform them or to facilitate their manipulation are foundries and machine shops, blast furnaces and steel mills, smelting plants, brick-, tile-, lime- and cement-making, petroleum refining and the glass industry. In such industries as the manufacture of coke and gas the coal used as a material which enters into the actual composition of the product is not treated as a fuel but as a raw material and is not, therefore, included in the figures of Table 34.

The total annual expenditure on fuel decreased by \$13,692,946 or 26.5 p.c. in the 11 years from 1921 to 1932, covered by the summary figures in Table 34. During this period prices of fuels generally have declined. Thus there has been an increase of 2.0 p.c. in the quantity of bituminous coal used while the value has decreased 36.5 p.c.

**34.—Total Values of Fuels Used in the Manufacturing Industries of Canada, 1921-32, with Details by Provinces and Groups, 1932.**

<sup>1</sup>Includes other kinds of fuel which in 1932 were as follows: Gasolene, \$290,806 and other fuels \$816,413.

## Section 5.—Manufacturing Industries in Cities and Towns.

The prosperity of most of the cities and towns of Canada, especially in the East, is intimately connected with their manufacturing industries, which provide employment for a large proportion of their gainfully occupied population. In the West the cities are more largely distributing centres, though manufactures are rapidly increasing there also.

Table 35, indicating the extent to which the manufacturing industries of Canada are concentrated in urban centres, shows, by provinces, the proportion of the gross manufacturing production which is produced in cities and towns having a gross production of over \$1,000,000 each. In the more highly industrialized provinces of Ontario and Quebec such cities and towns account for about 87 p.c. of the total, while in British Columbia and Prince Edward Island, where sawmilling, fish packing, and dairying are leading industries, the proportion falls to 55 p.c. or less. In the Prairie Provinces manufacturing is largely confined to a few large urban centres.

### 35.—Cities and Towns with a Gross Manufacturing Production of over \$1,000,000 each, Number of Establishments and Total Gross Production in such Cities and Towns as a Percentage of the Grand Total, by Provinces, 1932.

NOTE.—Statistics published in this table are in some cases higher than the figures published in Table 37, as in the table below statistics of towns with fewer than three establishments and a production of over \$1,000,000 each are included. It was not possible to publish this information in Table 37 without disclosing the operations of individual establishments. The statistics in this table do not include central electric stations.

| Province.                 | Cities and Towns with a Gross Production of over \$1,000,000 each. | Establishments Reporting in Cities and Towns Producing over \$1,000,000 each. | Total Production in Cities and Towns Producing over \$1,000,000 each. | Total Production in each Province. | Production in Cities and Towns as a Percentage of Total Production in each Province. |

The five chief manufacturing cities of Canada are Montreal, Toronto, Hamilton, Winnipeg and Vancouver. Statistics showing the trend of production in these cities during the latest five years for which the figures are available are given in Table 36. According to the Census of 1931, Hamilton was proportionately the most largely dependent of these cities upon manufacturing industries. About 45 p.c. of its gainfully occupied population was employed in manufacturing, as compared with 28 p.c. in Toronto, 27 p.c. in Montreal, 18 p.c. in Winnipeg and 16 p.c. in Vancouver.

Thirteen other important cities with a gross production of manufactured goods of over \$15,000,000 in 1932 were as follows in descending order of the value of their products: London, Kitchener, Quebec, Sarnia, Montreal East, Calgary, Ottawa, Oshawa, Peterboro, Three Rivers, Walkerville, East Windsor and Brantford. Statistics of manufactures of cities and towns with a gross production of \$1,000,000 and over and with three or more establishments are given for 1932 in Table 37.

### 36.—Principal Statistics of the Manufacturing Industries of the Five Leading Manufacturing Cities of Canada, 1929-33.

NOTE.—For comparable figures for the years 1922-28 the reader is referred to p. 467 of the 1933 Year Book. Statistics for 1932 and 1933 do not include central electric stations.

## CHAPTER XV.—CONSTRUCTION.

Construction is the most conspicuous example of a great industry carried on in almost complete dependence on a local demand. The building industry is not only the most widespread in its operation, it is one which expands most rapidly in good times when it attracts great numbers of general and casual workmen—a characteristic which explains the high rate of unemployment from which the industry periodically suffers. Again, apart from the effect of cyclical fluctuations of general business conditions, the construction industry is decidedly seasonal, although new types of construction and mechanical improvements are making it possible to work more steadily on all branches of construction the year round. Conditions in the industry are being transformed on account of the increasing substitution of reinforced concrete for wood and brick construction. Nevertheless, in the winter there is a serious contraction, especially in outside operations, while in the other seasons the contractors employ a much larger number of men, casually engaged, than can be retained throughout the year. A considerable number of the men are in no sense skilled artisans and the supply of unskilled men is generally in excess of the demand.

### **Relation of Construction Industry to General Business Conditions.—**

Statistics showing activity in construction are of particular interest both to those engaged in the industry itself and to those concerned with the supplying of its raw materials, such as lumber, steel, cement, paint, glass and hardware. All of these latter industries are prosperous when the construction industry is active, and depressed when it is at a standstill; again, the effects of their activity and depression are felt throughout the whole field of industry, so that the current conditions in the construction industry react powerfully upon the whole economic life of the nation. Thus, in the period between 1909 and 1913, construction, mainly financed with borrowed money, contributed in large measure to produce the "boom" of those years, as is indicated in the figures of Table 1.

During the war period the industry was at a low ebb, except for the construction of munition plants, but after the War the housing shortage was a serious problem, and considerable building was undertaken in spite of the high cost of materials and skilled labour, as shown in Table 4. The urgent requirements due to the practical suspension of the industry during the War were fully met in the post-war years, but the peak of the inflation cycle in 1929 is reflected in the highest value of construction contracts on record, aggregating \$576,651,800, exceeding 1928 by no less than \$104,619,200 and the former peak year, 1912, by \$113,568,800. This was followed by consistent declines.

In 1933 the total value of construction contracts awarded had declined to \$97,289,800, which was \$35,582,600 or 26·8 p.c. less than in 1932, and constituted a decline of \$479,362,000 or 83·1 p.c. from the peak in 1929. In 1934, however, the value of the contracts awarded advanced to \$125,811,500, a gain of \$28,521,700 or 29·3 p.c. over 1933, but still \$450,840,300 or 78·2 p.c. under the high point of 1929. (See Table 2.)

**Construction in Transportation and Public Utility Industries.—**The expenditures by railways during 1933 were greatly curtailed; "maintenance of way and structures" was less than half of what it was in 1928, amounting to only \$48,226,441, and "maintenance of equipment" was reduced to \$47,962,504, or to 47 p. c. of the peak year 1928. Expenditures on new lines and additions and betterments were practically eliminated, amounting to only \$208,671 and \$107,684 respectively, whereas during 1926-31 they averaged \$24 million and \$59 million respectively.

Only 0.4 miles of new line were opened for operation during 1933 and 82 miles were closed. At the end of 1933 there were 291 miles of line completed but not opened to traffic and 346 miles of line under contract. Total track mileage in 1933 was 56,698 miles as against 57,023 miles in 1932.

Maintenance expenditures on electric railways have also decreased since 1929, owing to several railways ceasing operation and to retrenchments on the part of the operating lines. In 1933 "maintenance of way and structures" amounted to \$2,300,709 and "maintenance of equipment" to \$2,766,888. The cost of materials used by steam railways for construction purposes was \$17,574,793 and by electric railways \$515,274.

The pole line mileage of telegraph systems increased up to 53,228 miles in 1931, but decreased in 1932 and again in 1933 to 52,112 miles, while wire mileage was also reduced in these two years. During 1932 \$1,228,660 was expended on construction work but in 1933 only \$843,973 was so expended.

Telephone systems spent little on new construction in 1933 and the credits for reductions in lines more than offset the debits by \$363,701. The total number of poles purchased during the year amounted to 50,813, at a cost of \$147,144. The pole line mileage decreased from 220,459 in 1932 to 219,753, but the wire mileage increased from 5,089,261 miles to 5,134,871 miles.

Expenditures by central electric stations during 1933 on construction amounted to \$3,250,940 as against \$2,775,687 in 1932.

**Contracts Awarded.**—A record of contracts awarded during the years 1911-34, as compiled by MacLean Building Reports, Ltd., is given in Table 1. The aggregate for 1934 is 78 p.c. less than that for the record year 1929. It is, however, an improvement over 1933, which was the lowest figure since 1917, when new construction was largely suspended on account of the War. Immigration was exceptionally great in 1912 and an extensive building program was necessary to care for the rapidly growing population; railway construction was also very active. In 1928 the high level was largely accounted for by residential building and industrial contracts were considerably ahead of 1927. Although residential construction declined in 1929, the tremendous increase in engineering construction and the significant advances in building for business purposes combined to make the record total. It will be observed from Table 2 that construction for all purposes has declined greatly since then to the low levels recorded in 1933 and 1934.

**1.—Summary of the Value of Construction Contracts Awarded in Canada, 1911-34, as Compiled by MacLean Building Reports, Ltd.**

| Year.     | Value of<br>Construction<br>Contracts. | Year.     | Value of<br>Construction<br>Contracts. |
|-----------|----------------------------------------|-----------|----------------------------------------|
|           | \$                                     |           | \$                                     |
| 1911..... | 345,425,000                            | 1923..... | 314,254,300                            |
| 1912..... | 463,083,000                            | 1924..... | 276,261,100                            |
| 1913..... | 384,157,000                            | 1925..... | 297,973,000                            |
| 1914..... | 241,952,000                            | 1926..... | 372,947,900                            |
| 1915..... | 83,916,000                             | 1927..... | 418,951,600                            |
| 1916..... | 99,311,000                             | 1928..... | 472,032,600                            |
| 1917..... | 84,841,000                             | 1929..... | 576,651,800                            |
| 1918..... | 99,842,000                             | 1930..... | 456,999,600                            |
| 1919..... | 190,028,000                            | 1931..... | 315,482,000                            |
| 1920..... | 255,605,000                            | 1932..... | 132,872,400                            |
| 1921..... | 240,133,300                            | 1933..... | 97,289,800                             |
| 1922..... | 331,843,800                            | 1934..... | 125,811,500                            |

## 2.—Construction Contracts Awarded in Canada, 1929-34, by Provinces and Types of Construction, as Compiled by MacLean Building Reports, Ltd.

| Distribution.                   | 1929.              | 1930.              | 1931.              | 1932.              | 1933.             | 1934.              |

**Building Permits.** The estimated value of construction in 61 cities of Canada, as indicated by their building permits, is shown for the years 1929 to 1934 inclusive in Table 3. These cities had in 1931 about 36 p.c. of the population of Canada, while their 1934 building permits aggregated \$27,457,524 or 21·8 p.c. of the total contracts awarded, as shown in Table 1. In Table 3, the 35 cities for which statistics of building permits are available since 1910 are indicated by an asterisk (\*), and the totals for these cities are given beneath the totals for the larger group.

Table 4 shows the value of the building permits issued by 35 cities in the years 1910-34. The average weighted index numbers of wholesale prices of building materials since 1912 are given, together with index numbers of employment in the construction industries as reported by employers 1920, both these indexes having been compiled by the Dominion Bureau of Statistics. The average index numbers of wages in the building trades since 1910 as compiled by the Department of Labour are also given. These indexes show as far as possible the fluctuations in building costs with their effect upon construction work and employment. At various

times attempts have been made to determine the relative proportions of material and wage costs in general building; such proportions vary with the type of building and the centres studied, and accurate and representative data are difficult to obtain. However, the results of a survey made in 1934 and published in "Building in Canada" (June, 1934) showed that in fifteen cities the average proportions in all types of construction were 63.6 p.c. for materials and 36.4 p.c. for labour. The reduction in the cost of building operations in the past few years has probably been much more than is indicated by the declines in the indexes of wholesale prices and wages. Index numbers of wages in the building trades are based chiefly on union rates in cities, and the types of construction which have been stimulated have been those where the more highly paid trades have not been in great demand. The reduction in common labour costs has been proportionately greater than in the trades. The considerable gain in the index of employment in construction is due partly to a greater volume of public works undertaken as an unemployment relief measure, but there has also been an improvement in general building, as reflected in the value of the contracts awarded and of building permits issued in 1934.

Owing to the increasing use of the automobile and other means of rapid transportation, a growing percentage of those who work in the cities reside outside the municipal boundaries. Hence arises, in part, the necessity for an extension of the record of building permits to include such suburban areas as the York Townships in the case of Toronto, and North Vancouver in the case of Vancouver. South Vancouver and Point Grey were annexed to Vancouver as from Jan. 1, 1929.

The construction contracts in 1934 as shown in Table 2 increased by 29.3 p.c. \* compared with 1933 and the building permits of 61 cities in Table 3 increased by 26.1 p.c.

### 3.—Values of Building Permits Taken Out in 61 Cities for the calendar years 1929-34.

NOTE.—Asterisks indicate the 35 original cities, statistics for which are available since 1910.

The index numbers of wages and wholesale prices of materials in Table 4 show the fluctuations in building costs over the period 1910-34. During 1934 the wages index declined by 2 p.c. as compared with 1933, but there was a moderate increase in the index of wholesale costs of building materials. As already stated on p. 514, the general decline in the cost of building in the past few years has probably been much more than is indicated by these index numbers.

The increase in the volume of employment afforded in the construction industries during 1934, as compared with 1932 and 1933, is mainly due to the important program of public works undertaken as an unemployment relief measure, although there was also greater activity in general building work, as reflected in the higher value of contracts awarded and of building permits issued.

## CHAPTER XVI.—EXTERNAL TRADE.

This chapter commences with a historical sketch of Canadian external trade, the Canadian tariff, and recent developments in external trade, followed by a brief account of the Commercial Intelligence Service. Thereafter is to be found a treatment of statistics of external trade under ten subordinate headings: historical statistics of Canadian trade; general analysis of current import and export trade; trade with the United Kingdom and the British Empire; trade with the United States and other foreign countries; geographical distribution of Canadian trade by continents and countries; principal commodities imported and exported; trade in raw and manufactured products; Canada's position in international trade; main historical tables and tables showing current trends (Tables 1 to 21); and comparison of the volumes of imports and exports (Table 22). The chapter is finally brought to a close with sections on the tourist trade of Canada, and on Canada's balance of international payments in recent years.

### Section 1.—The Development of Tariffs.

An outline of the development of tariffs as affecting Canada naturally falls into two divisions: first, a historical sketch showing the various phases of Canadian trade which have influenced tariff development; and second, the present tariff conditions under which Canadian trade is carried on.

#### Subsection 1.—Historical Sketch of External Trade and Tariffs.

In the early history of the American continent each of the European nations establishing settlements in the New World endeavoured to monopolize the commerce of its colonies, prohibited the ships of other nations from resorting to them and prohibited its colonials from importing European goods from other countries, generally granting them, however, preferential treatment in its own market. In these circumstances the colonial wars in America were carried on, by Governments permeated by the mercantile spirit, for "ships, colonies and commerce". Owing to this fact, wars resulting in the transfer of colonies from one European power to another involved great economic as well as political changes in the community so transferred. The traders who had previously controlled the trade between the mother country and its colony found their occupations gone, while new traders from the conquering State arrived to take over the import and export trade, which thereafter flowed in new channels, perhaps no more artificial than those which had previously existed.

Throughout the earlier part of the French *régime* in Canada, the foreign trade of the colony was in the hands of the monopolistic chartered companies, of which the Company of One Hundred Associates was the most notable. When its monopoly was cancelled in 1663, the external trade of Canada still remained a preserve of the merchants of Old France. Upon the conquest of the country by the British, the French merchants, who had their offices in Quebec and Montreal, for the most part returned to France, and the trade of the Colony fell into the hands of the traders from England, Scotland and New England, who had flocked into the country on the heels of the invading armies. Some of their descendants are still among the leading figures in Canadian import and export trade.

For the first sixty years of British rule, Canadian commerce was carried on almost exclusively with or through the United Kingdom, the merchants of New

England complaining, after the American Revolution, of being shut out from the Canadian trade. The geographical juxtaposition of the United States to British North America was, however, a factor which could not permanently be ignored, and smuggling became more and more prevalent as settlement extended westward along the International Boundary. In 1822 the United Kingdom made large concessions to United States traders in respect of the Canadian trade. In 1846 she abolished the preferential treatment which she had given to Canadian wheat, and in 1860 all vestige of preference to colonial products disappeared from the British tariff. As a consequence, the colonies which, like Canada, Nova Scotia and New Brunswick, were by this time enjoying responsible government, could not any longer be refused the right to control their own commercial policy—a fact which was emphasized in an important report prepared in 1859 by the then Minister of Finance, (Sir) A. T. Galt, and forwarded to the British Government. This report declared that the responsibility of the Canadian Government must be to the Canadian people, more especially in matters of taxation (the greater part of the revenue being raised by customs duties), and that the Canadian Government must affirm the right of the Canadian Parliament to adjust the taxation of the people in the way it deemed best, even if this should happen to meet with the disapproval of the British Ministry. This doctrine remained unchallenged by the British Government and, coming at a time when all important parties in Great Britain had accepted free trade as a *fait accompli*, it facilitated the setting up in Canada of a protective tariff, designed to secure the establishment in Canada of manufacturing industries, at a time when British opinion desired that the colonies should concentrate their attention on the production of food and raw materials and import from the United Kingdom the manufactured commodities which they required.

**The Abolition of Preference and the Reciprocity Treaty of 1854.**—The abolition of the British preference on Canadian wheat in 1846 brought about a depression in the flour-milling industry of Montreal and an ephemeral agitation for union with the United States. The effects of the repeal of the preference were, however, mitigated in 1849 by the repeal of the Navigation Acts and the consequent opening of the carrying trade between Canada and the United Kingdom to the shipping of the world. Meanwhile, the abandonment of protection in the Mother Country led to the initiation of negotiations for a reciprocity treaty with the United States. A treaty for the free exchange of natural products between them and the British North American colonies was negotiated in 1854, and became effective on Mar. 16, 1855. From its operation the Canadian farmer and fisherman derived considerable benefit, more especially during the period of the Civil War, when prices in the United States were particularly high. Partly as a consequence of the friction between the United Kingdom and the United States during the Civil War period and partly because the new Canadian tariff of 1859 shut out the manufactured goods of the United States, the treaty was denounced by the United States at the end of the ten-year period for which it had been negotiated and ceased to operate 12 months later on Mar. 17, 1866. The denunciation of the treaty had a considerable effect in bringing about the confederation of the British North American colonies, which it was hoped would to a great extent consume each other's products.

**Tariff Policy since Confederation.**—The immediate effect of Confederation was to abolish the tariff barriers which existed between the provinces entering the Dominion. As the area of Canada increased until, except for Newfoundland and Labrador, it became conterminous with British North America, the area of internal

free trade was thereby extended, while protection against outside competition was generally maintained. However, the protective tariff of the old province of Canada, adopted in 1859 with a prevailing rate of 20 p.c., was replaced in 1866 by a tariff assimilated to the revenue tariffs of the Maritime Provinces, with the rates of duties on the great bulk of manufactured commodities reduced from 20 and 25 p.c. to 15 p.c. Later on, the world-wide depression which commenced in 1873, and the consequent falling-off in a revenue based upon trade, necessitated an increase of the general rate to  $17\frac{1}{2}$  p.c., with a 20 p.c. rate on certain luxuries. Even this increase failed to fill the treasury.

In 1879, after the people had declared for a protective policy in the general election of 1878, the duties on imported manufactured goods were considerably increased, the rate on goods "not otherwise provided" being raised from  $17\frac{1}{2}$  p.c. to 20 p.c., the rates on cotton goods from  $17\frac{1}{2}$  p.c. to rates, specific and *ad valorem*, equivalent, on the importations of 1881, to 30 p.c., while the duties on woollens were practically doubled. The rate on furniture and clocks was increased to 35 p.c.; on carriages, glassware, wall-paper and silks, to 30 p.c.; on boots and shoes, buttons, rubber goods and woodenware, to 25 p.c. Pig iron, previously free, now paid \$2 a ton, and the duty on iron billets, bars and rods was increased from 5 p.c. to 10 and  $17\frac{1}{2}$  p.c., while manufactured iron and steel products and machinery were given 25 to 35 p.c. protection. Throughout the '80's the general trend of the minor revisions made in the tariff was still upwards but in the '90's a downward tendency became manifest. In 1891 the duty on raw sugar was repealed, and in 1894 material reductions were made on agricultural implements and minor readjustments on cottons and woollens. This period was also marked by the thorough-going extension of protection to the iron and steel industry, both by customs duties and bounties.

In the tariff revision of 1897, the duties on Indian corn, binder twine, barbed wire, pig iron, flour and refined sugar were reduced or abolished, while the bounties on domestic pig iron were not reduced but in certain cases increased. But the most distinctive feature of the tariff revision of 1897 was the adoption of what was called a "reciprocal" tariff, one-eighth lower than the general. This "reciprocal" tariff was at once applied to the United Kingdom, and afterwards to New South Wales and to British India, while Belgium and Germany, in virtue of their trade treaties with the United Kingdom, were also admitted to the benefits of the "reciprocal" tariff, together with Argentina, Austria-Hungary, Bolivia, Colombia, Denmark, Persia, Russia, Sweden, Switzerland, Tunis and Venezuela, on account of most-favoured-nation treaties between these countries and the United Kingdom, also France and her colonies, in consequence of the Franco-Canadian treaty of 1893. A little later the "reciprocal" tariff was also extended to the Netherlands, Japan, Siberia, Morocco, Salvador, South African Republic, Tonga and Spain, under most-favoured-nation treaties between these countries and the United Kingdom.

The numerous concessions mentioned above were, however, of a merely temporary character, ceasing to exist in 1898 as a consequence of the denunciation by the United Kingdom of her most-favoured-nation treaties with Germany and Belgium. This left Canada free to confine her lower tariff rates to the United Kingdom and to sister Dominions and colonies. A British preferential tariff, consisting at first of a remission of 25 p.c. of the duty ordinarily paid (Aug. 1, 1898), and later of a remission of  $33\frac{1}{3}$  p.c. of the ordinary rate of duty (July 1, 1900), was established. This method of preference was abandoned in 1904 for a specially low rate of duty on almost all imported dutiable commodities.

**Subsection 2.—Preferential Tariff and Trade Treaties.\***

**Tariff of 1907 and Empire Preferences.**—A new Canadian Customs Tariff was adopted on April 12, 1907, containing three columns of duties, British preferential, intermediate and general. This tariff with amendments is still in operation. The Tariff Act itself mentions, as being entitled to the British preference, those parts of the Empire which were already enjoying it under previous measures, namely: United Kingdom, British India, Ceylon, New Zealand, Union of South Africa, Southern Rhodesia, Bermuda, British West Indies, British Guiana and Straits Settlements. Power was taken to extend the same advantages, by Order in Council, to other parts of the Empire. Under this authority the British preference was, on Jan. 25, 1913, granted to: Swaziland, Basutoland, Bechuanaland Protectorate, Northern Rhodesia, Nyasaland Protectorate, Uganda Protectorate, East Africa Protectorate, Protectorate of Northern Nigeria, Colony and Protectorate of Southern Nigeria, Gold Coast, Sierra Leone, Gambia, Somaliland Protectorate, Federated Malay States, British North Borneo, Sarawak, Brunei, Mauritius and Dependencies thereof, Seychelles, St. Helena, Ascension, Friendly or Tonga Islands, Fiji, Falkland Islands and British Honduras. Further extensions were to: Irish Free State, Sept. 21, 1923; Territory of Western Samoa, Oct. 1, 1924; Newfoundland, June 26, 1928; Tanganyika Territory, Dec. 19, 1930; Channel Islands, Isle of Man, Kenya Colony and Protectorate (formerly East Africa Protectorate), Colony and Protectorate of Nigeria, (formerly Protectorate of Northern Nigeria and Colony and Protectorate of Southern Nigeria), British Sphere of the Cameroons, British Sphere of Togoland, part of New Guinea under mandate of Australia, and Cyprus, all on Sept. 24, 1931; Unfederated Malay States, June 28, 1933; Cayman Islands, July 27, 1933; Australia, July 7, 1934 (on all products except butter, raisins, dried currants, wheat and wheat flour).

**Trade Agreements with Australia.**—A formal Trade Agreement between Canada and Australia (superseding an arrangement of 1925, exchanging limited preferences by legislation) was brought into force on Aug. 3, 1931, providing for exchange of British preferential rates, except as set forth in two schedules—one of which concedes special Canadian rates on some Australian products, while the other specifies the tariff treatment given by Australia to Canada on certain items, as well as enumerating items which Australia reserves as regards granting preferential treatment. Canada is accorded the British preferential tariff of Australia on all but 18 of the 439 items comprising the entire tariff. On six items intermediate rates apply and on the other twelve, the general tariff. An important concession to Canada is the creation of new or larger margins of preference than existed in the former tariff on some products of importance to Canada. Other general provisions waive anti-dumping laws, and permit either country to apply its general tariff rates to imports from the other which are injuriously affecting the sale of similar domestic goods, provided that, after three months notice, the exporting country has failed to remedy the situation.

**Trade Agreements with British West Indies.**—To the British West Indies concessions independent of the British preference were made in an Agreement of 1912, which obtained West Indian preferential rates of four-fifths of the general tariff on some Canadian goods. In 1920 a second Trade Agreement, broader both as to the extent of the preferences exchanged and the number of West Indian signatories, superseded the first. This in turn was replaced on July 6, 1925, by one

\* Revised by W. Gilchrist, Chief, Foreign Tariffs Division, Department of Trade and Commerce.

still more extensive, brought formally into force by proclamation as from April 30, 1927. It is binding for a 12-year period and thereafter until terminated on a years notice. It includes: Jamaica, Trinidad, Barbados, Bahamas, Leeward Islands, Windward Islands, Bermuda, British Guiana and British Honduras. The larger colonies give a preference of 2s. per brl. on flour, and various stated amounts on some other commodities of importance. The preference on manufactured goods in general, when not specially dealt with, ranges from 20 p.c. to 50 p.c. of the general tariff. In return Canada grants the colonies: (a) specific amounts of preference on sugar and some other selected tropical products; (b) a 50 p.c. reduction from the general tariff on goods for which no special provision is made.

**Trade Agreement with New Zealand.**—Imports from New Zealand have been accorded British preferential rates since 1904. Furthermore, on Oct. 1, 1925, the special rates of the Trade Agreement with Australia were extended to New Zealand. Canada was granted the British preferential rates of New Zealand established in 1903. However, from Oct. 12, 1930, after due notice, Canada withdrew the Australian treaty rates as regards imports from New Zealand, and on June 2, 1931, New Zealand withdrew her British preferential rates from all but a few items of Canadian goods. After negotiations a new Trade Agreement with New Zealand was brought into force for one year by proclamation as from May 24, 1932. On May 24, 1933, the Agreement was extended for six months; on Nov. 24, 1933, for another six months; and on May 24, 1934, for a further 12 months. By this Agreement Canada grants New Zealand rates lower than British preferential on various articles of outstanding interest to her, and otherwise extends to her the British preferential tariff. New Zealand restores the British preferential rates to Canada except on six items on which, however, she concedes rates lower than the general tariff. On lumber, laths, and shingles, where no preference existed previously, because the general and preferential rates were the same, New Zealand creates a differential between her British preferential and general tariffs, so as to afford Canada a tariff preference on such products. Under a general provision of the Agreement anti-dumping laws of both countries are suspended except in the case of imports injurious to domestic industry when the exporting country does not apply remedial measures after 30 days notice. Other general provisions extend the Agreement to Western Samoa and Cook Islands.

**Preferences by The United Kingdom Prior to the Imperial Conference, 1932.**—The United Kingdom, between 1919 and 1931, granted preferences to Empire products within the limited scope of her tariff of that time. By 1931 there were preferences on: motor cars, clocks and watches, musical instruments, cinematograph films, all known as "McKenna duties"; sugar, goods containing sugar, glucose, tobaccos, certain dried fruits, chicory, cocoa, coffee, hops, spirits, wines, silk and artificial silk goods; pottery, buttons, household hollow-ware (safeguarding duties); and on "key industry goods" mainly certain chemicals, optical instruments, arc lamp carbons, vacuum tubes, metallic tungsten, some scientific instruments and scientific glassware. In consequence of the Abnormal Importations (Customs Duties) Act, passed Nov. 20, 1931, to remain in effect for six months, giving authority for Orders in Council imposing duties, not to exceed 100 p.c. *ad valorem*, on foreign manufactured goods, some 50 items were subjected to 50 p.c. *ad valorem*. The Horticultural Products (Emergency Customs Duties) Act, passed Dec. 11, 1931, to remain in force for twelve months, gave the Government power to impose duties by Orders in Council up to 100 p.c. *ad valorem* on certain fresh fruit, fresh vegetables and

plants of non-Empire origin. Five Orders were passed under this Act. The Import Duties Act effective Mar. 1, 1932, imposed a duty of 10 p.c. *ad valorem* on goods which were not otherwise subject to duty except for some exemptions including wheat and maize (afterwards made dutiable), meats (not including canned), live animals, raw cotton, flax and hemp, wool, hides and skins, newsprint, pulp, wooden pit-props, metallic ores, coal and certain other minerals, unwrought copper and all goods imported for shipbuilding. Products of the Dominions, India, and Southern Rhodesia were exempt from this duty until Nov. 15, 1932, their treatment after that date to depend on the Imperial Conference. Products of other parts of the British Empire were exempt from the 10 p.c. duty without limitation as to date. By an Order effective April 26, 1932, the 10 p.c. general tariff was increased to rates ranging from 15 to 33½ p.c. *ad valorem*, on a wide range of merchandise, chiefly manufactured goods. Over 100 subsequent orders have been issued either increasing rates on particular commodities or exempting articles from duty.

**The Imperial Economic Conference, 1932.**—*The United Kingdom-Canada Agreement.*—Under this Agreement the United Kingdom, while continuing to grant to products of Canada those preferences and exemptions from duty established by the Import Duties Act cited above, provided, for important Canadian products, additional preferences by the imposition of new or increased duties on competing foreign imports. Chief among these products were: eggs, butter, cheese, condensed milk, wheat, fresh and canned apples, and unwrought copper. The continuation of a 10 p.c. preference was guaranteed on dutiable timber, fresh and canned fish, asbestos, lead and zinc. Canada was granted unrestricted entry for a maximum quota of 2,500,000 cwt. per annum of bacon and hams, and for 10 years a margin of preference of 2s. ½d. per lb. on unmanufactured tobacco. Certain preferences accorded in United Kingdom Agreements with other Dominions apply automatically to Canada as an Empire country. As regards eggs, poultry, butter, cheese and other milk products, free entry is guaranteed for three years, after which the position as regards these articles is subject to review. Increased preferences to Canada in many of the non-self-governing Colonies and Protectorates were provided for on selected articles. The British reserved the right to remove duties on foreign wheat, copper, lead and zinc if at any time Empire producers were unwilling or unable to provide, at world prices, the United Kingdom requirements. In return Canada agreed to widen the margin of preference on imports from the United Kingdom on a great variety of goods as set forth in a schedule attached to the Agreement. Actual changes were made in 225 Canadian tariff items, on 223 of which the margin of the British preference was increased. The tariff was lowered on 133 items, more than half of which were placed on the free list, in the other cases the margin was increased by raising the intermediate and general tariffs. By major groups, the tariff changes mainly concerned iron and steel, drugs and chemicals, textiles, leather goods, glass, vegetable oils, as well as a wide list of miscellaneous commodities. Generally speaking manufactured goods of a class or kind not produced in Canada were made free. Additional preferences were also provided for imports into Canada of various commodities produced largely in the non-self-governing Colonies and Protectorates. Canada agreed that the tariff should be based on the principle that protective duties should not exceed such a level as would give United Kingdom producers full opportunity of reasonable competition in Canada on the basis of the relative cost of economic and efficient production with special consideration to be given to industries not fully established. Canada undertook to institute the Tariff Board, already

authorized by Statute, to review duties on United Kingdom goods in accordance with these principles and not to increase these duties except in accordance with the Board's findings. Canada further agreed to abolish surcharges on imports from the United Kingdom as soon as Canada's finances would allow and to give sympathetic consideration to the abolition of the exchange dumping duty on British goods. (By an amendment to the special War Revenue Act, Canada on June 28, 1934, reduced an Excise Tax of 3 p.c. levied on duty-paid value to  $1\frac{1}{2}$  p.c. as regards goods entered under the British preferential tariff or trade agreements with a British country.) The Agreement was to continue for 5 years and be subject thereafter to termination upon 6 months notice by either party.

*Other Agreements.*—The Agreement between Canada and the Union of South Africa places commercial relations between these two Dominions on a treaty basis for the first time. It covers the principal commodities which each Dominion can sell to the other, but is more limited in scope than the trade Agreements concluded earlier with Australia and New Zealand. A considerable extension of the preferred list of commodities has been obtained for Canada. Special consideration has been given to corn from South Africa, although fruits in certain seasons, peanuts, sugar and molasses are also given consideration. Wheat, flour, apples, hoisery, binder twine, machinery, vacuum cleaners, iron pipes, tools, shooks, lumber, canned fish, motor cars, electrical appliances, rubber goods and paper products are the chief items on which concessions are made to Canada.

The Agreement with the Irish Free State secured for all goods the produce and manufacture of Canada imported into the Irish Free State the benefits of the lowest rates of duty accorded to similar products of any country. In return, goods the produce of the Irish Free State, when imported into Canada, were to be accorded the same tariff treatment as similar goods imported from the United Kingdom.

The Agreement with Southern Rhodesia made provision for the exchange of preferential treatment on selected lists of commodities. In addition, other goods not enumerated in the schedules continue to enjoy the benefits of existing and future British preferences. Indian corn, citrous fruits and peanuts are given free entry by Canada, whereas Southern Rhodesia gives our manufacturers important concessions on cream separators, batteries, boots and shoes, and paper products.

**Other Empire Preferences on Canadian Goods.**—Even in the absence of trade agreements many tariff preferences are accorded to Canadian goods throughout the Empire. The general position now is that nearly all goods, the produce or manufacture of Canada, shipped in accordance with prescribed regulations, are granted tariff preferences over non-Empire goods in Great Britain and Northern Ireland, Australia, New Zealand, Fiji, Western Samoa, British West Indies (thirteen tariffs), Bermuda, British Guiana, British Honduras, Southern Rhodesia, Northern Rhodesia (Zambesi Basin), Gambia, Sierra Leone, Seychelles, British Somaliland, Cyprus, and Isle of Man. To a considerable extent tariff preference is similarly granted to Canadian goods in the Irish Free State, the Union of South Africa, Ceylon, Mauritius, St. Helena, British Protectorate of Tonga, British Solomon islands, Gilbert and Ellice Islands, and Malta, also on some goods in the Federated Malay States, the Unfederated Malay States, British North Borneo, Sarawak, and Brunei. Empire motor cars enjoy preference in Hong Kong, the Straits Settlements, and Guernsey; spirits and malt liquors in Gibraltar; and wines in the Falkland Islands.

**Canadian Tariff Arrangements with Foreign Countries.**—Arising out of some old British treaties, later British treaties or favoured-nation clauses sanctioned by Canadian Acts of Parliament, or in consequence of purely Canadian conventions of commerce, Canada extends, on a reciprocal basis, most-favoured-nation customs treatment, except where otherwise indicated, to the goods of the following countries:—

| Country.                                                                          | Treaty or Convention.                                                                                                                                                                                                                              | Terms.                                                                                                                                                                                                               |
|-----------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Argentine Republic.....                                                           | Treaty of Amity, Commerce and Navigation with the United Kingdom of Feb. 2, 1825.....                                                                                                                                                              | Exchange of most-favoured-nation treatment.                                                                                                                                                                          |
| Austria.....                                                                      | Exchange of Notes. Canadian Orders in Council of July 5, 1933, Dec. 29, 1933, and Jan. 14, 1935, latter for an indefinite period subject to termination on three months' notice.....                                                               | Canadian intermediate tariff exchanged for most-favoured-nation treatment in Austria.                                                                                                                                |

| Sweden.....                                               | Convention of Commerce and Navigation between the United Kingdom and Sweden (and Norway) of Mar. 18, 1926.                                                                                                                                    | Exchange of most-favoured-nation treatment. |
| Switzerland.....                                          | Treaty of Friendship, Commerce and Reciprocal Establishment between the United Kingdom and Switzerland of Sept. 6, 1855.....                                                                                                                  | Exchange of most-favoured-nation treatment. |
| Venezuela.....                                            | Treaty of Amity, Commerce and Navigation between the United Kingdom and Colombia (of which Venezuela was then part) of April 18, 1825.....                                                                                                    | Exchange of most-favoured-nation treatment. |

Under mutual most-favoured-nation customs treatment each contracting country accords to the goods of the other the lowest duties applied to similar products of any foreign origin, unless there are reservations. These reservations would be tariff concessions, not considered of relatively great importance, which one country may grant to another on historical, geographical, or some related ground. Most-favoured-nation obligations do not include Canadian preferences given to other parts of the Empire. Canada's concessions to France in the Convention of Commerce of 1922 established the rates applicable to most-favoured foreign nations. This Convention expired on June 16, 1932. A new Trade Agreement between Canada and France, signed on May 12, 1933, went into force on June 10, 1933, and was followed by an Exchange of Notes on Sept. 29, 1934, extending concessions on both sides. Benefits to most-favoured nations under the Canadian tariff now consist of the rates of the intermediate tariff because they are granted by Agreements to Brazil, Germany and Austria, and in addition any rates lower than intermediate existing in the Trade Agreement between Canada and France.

The value to Canada of most-favoured-nation treatment in foreign countries depends on the customs system of the country concerned. Several countries have maximum and minimum schedules, meaning that there are reduced duties for practically all goods imported from reciprocating or treaty countries. Some countries, on account of rates conceded in treaties, maintain reduced duties on specified items of their tariffs. Many countries throughout the world have uniform tariffs regardless of the origin of the goods. The benefit of most-favoured-nation treatment depends also on the extent to which tariff favours apply to countries competing with Canada in the market in question.

*Powers of the Governor in Council.*—The Governor in Council may make reductions of duties on goods imported into Canada from countries granting reductions on Canadian products.

The Governor in Council is given power to prohibit the importation of any goods exported directly or indirectly from any country not a contracting party to the Treaty of Versailles executed at Paris, France, on June 28, 1919.

In the event of producers of goods taking advantage of any duty under the provisions of the customs tariff, the Governor in Council is empowered to reduce or remove such duty and, where a producer violates the provisions of Sec. 17, to impose upon all his products an excise duty equivalent to the amount of customs duty which would be paid by such goods if imported under the provisions of the general tariff. These provisions, however, do not apply to agricultural products.

*Combination.*—Whenever it is deemed in the public interest to inquire into any combination alleged to exist detrimental to consumers, the Governor in Council may commission or empower any judge of the Supreme Court or of the Exchequer Court of Canada, or of any superior court or county court in Canada, to hold an inquiry in a summary way and to report to the Governor in Council whether such combination exists, the judge being empowered to compel attendance of witnesses, examine them under oath, and require production of books and papers, etc., and, upon the judge reporting the existence of such a combination, the Governor in Council is given authority to admit the article concerned free of duty, or so reduce the duty thereon as to give the public the benefit of reasonable competition if it appears that the disadvantage to the consumer is facilitated by the duties of customs imposed on a like article.

## Section 2.—The Commercial Intelligence Service.\*

The Commercial Intelligence Service, maintained by the Department of Trade and Commerce, is designed to further the interests of Canadian trade in other parts of the Empire and in foreign countries. To this end there are established throughout the world offices administered by Trade Commissioners. These Trade Commissioners make periodical reports upon trade and financial conditions, variations in markets and the current demand or opportunities for Canadian products. They also secure and forward to the Department in Ottawa specific inquiries for Canadian goods and in general exert their best efforts for the development and expansion of overseas markets.

*Organization at Ottawa.*—Besides the overseas organization of the Commercial Intelligence Service, there is a headquarters staff at Ottawa. This is presided over by a Director, who is the head of the Service and administers and unifies the work assigned to the various Trade Commissioners. Assisting the Director are the following divisions: Trade Inquiries—where inquiries for Canadian products, forwarded by the Trade Commissioners, are prepared for publication and distribution, and the Exporters Directory listing Canadian exporters with their agents abroad, commodities handled, ratings, cables and codes used, etc., and the Foreign Importers Directory are kept up to date; Editorial—where the Commercial Intelligence Journal is compiled; Commodity Records—where information regarding markets for Canadian export commodities is indexed; Economics; Animal Products; Wood and Vegetable Products; Minerals, Metals and Chemicals; and Fish Products and Miscellaneous Manufactures. These last five divisions handle correspondence falling within their respective classifications.

\* Revised by L. D. Wilgress, Director, Commercial Intelligence Service, Department of Trade and Commerce.

Also, in order to keep abreast of Canadian industrial development, each Trade Commissioner makes a periodic tour of Canada and while in this country gives first-hand information to the Canadian manufacturer regarding opportunities and conditions of trade in his territory.

**Organization Abroad.**—A list of the countries in which Canadian Trade Commissioners are located, showing territory covered, name, post office and cable address of the Trade Commissioner in each case, is given below:—

## CANADIAN GOVERNMENT TRADE COMMISSIONERS.

NOTE.—This list revised as at Jan. 1, 1935. Cable address of Trade Commissioners is "Canadian" unless otherwise stated.

Under an arrangement made by the Minister of Trade and Commerce with the British Foreign Office, Canadian manufacturers, exporters and others interested in trade matters may secure information and advice from British commercial diplomatic officers and British consuls in all countries in which Canada is not represented by her own Commercial Intelligence Service.

**Commercial Intelligence Journal.**—The Commercial Intelligence Journal, containing the reports of the Trade Commissioners and other pertinent material relating to export trade, is published weekly by the Department of Trade and Commerce in both English and French editions. The subscription price for either edition is \$1 per annum in Canada and \$3.50 outside of the Dominion. Special reports dealing with various phases of Canada's export trade are also issued from time to time, as supplements to the Commercial Intelligence Journal.

### Section 3.—Statistics of External Trade.\*

NOTE.—For the correct interpretation of the statistics of external trade, it is necessary that the following definitions and explanations of the terms used should be carefully kept in mind.

*Fiscal Years.*—The Canadian fiscal year ended on June 30 of the years from 1868 to 1906, and on Mar. 31 of 1907 and subsequent years.

*Quantities and Values.*—In all tables of imports and exports, the quantities and values are based upon the declarations of importers (import entries) and exporters (export entries), as subsequently checked by customs officials.

*Imports: Valuation.*—"Imports" means "Imports entered for consumption". "Entered for consumption" does not necessarily imply that the goods have been actually consumed in Canada, but that they have passed into the possession of the importer and that duty has been paid on that portion liable for duty.

Under the main provisions of the law, the value of merchandise imported into Canada is the fair market value or price thereof when sold for home consumption in the principal markets of the country from which, and at the same time when, said merchandise was exported directly to Canada; but the value shall not be less than the price to jobbers and wholesalers generally, nor less than the actual cost of production at the time of shipment plus a reasonable advance for cost of selling, and profit. (See Sections 35 to 45 of the Customs Act.)

For Customs entry purposes, the value of the currency of the country of export is converted to Canadian currency at exchange ratios as authorized by law and Orders in Council. (See Section 55 of the Customs Act and Orders in Council respecting currency valuations.)

*Canadian Exports: Valuation.*—"Canadian produce" exported includes Canadian products or manufactures, also exports of commodities of foreign origin which have been changed in form or enhanced in value by further manufacture in Canada, such as sugar refined in Canada from imported raw sugar, flour ground from imported wheat, and articles constructed or manufactured from imported materials. The value of exports of Canadian merchandise is the actual cost or the value at the time of exportation at the points in Canada whence consigned for export.

*Foreign Exports: Valuation.*—"Foreign produce" exported consists of foreign merchandise which had previously been imported (entered for home consumption). The value of such commodities is the actual cost.

*Countries to which Trade is Credited.*—Imports are classified as received from the countries whence they were consigned to Canada. The countries of consignment are the countries from which the goods have come, without interruption of transit, save in the course of transshipment or transfer from one conveyance to another. The countries whence goods are consigned are not necessarily the countries of actual origin, since goods produced in one country may be purchased by a firm in another country and thence despatched, after a longer or shorter interval, to Canada. In such cases the second country would be the country of consignment, to which the goods would be credited. An example is the case of tea grown in the Orient but purchased in the bonded market in London, England; Canadian statistics record such imports as coming from the United Kingdom.

\*Revised by W. A. Warne, Chief, External Trade Branch, Dominion Bureau of Statistics. This Branch publishes the Annual Report of the Trade of Canada, the Condensed Preliminary Report of the Trade of Canada (annual), the Quarterly Report of the Trade of Canada, the Calendar Year Report of the Trade of Canada, the Summary of the Trade of Canada (monthly), etc. For complete list of the publications of this Branch see Chapter XXIX, Section 1, under "External Trade".

Exports are credited to the country of final destination, *i.e.*, the country to which they are consigned, whether that country possesses a seaboard or not. The country of final destination is the country to which goods exported from Canada are intended to pass, without interruption of transit save in the course of transhipment or transfer from one means of conveyance to another.

*Discrepancies in Trade Statistics between Canada and Other Countries.*—Canadian statistics of exports are rarely in exact agreement with the import figures of her customers and similar differences occur with Canadian imports. Many factors contribute to these discrepancies; among these are the following:—

(1) Differences in the basis of the Canadian valuations and those of the valuations of other countries.

(2) Even where the statistics cover the same period of time, there are quantities of goods on their way from the exporting to the importing country at the beginning and end of the period.

(3) By far the greatest discrepancies occur from the impossibility of determining the country of final destination for exports or the actual country of origin for imports. Thus about 14 p.c. of Canada's exports to overseas countries are shipped *via* the United States. Some of this is credited by importing countries to the United States. Canadian grain exports, for example, are to a large extent routed through the United States in bond. Most of this grain leaves Canada with the United Kingdom as the stated destination, but large quantities are later diverted to other European or overseas countries and some is taken out of bond for consumption in the United States. Thus the Canadian record of exports to the United Kingdom may be \$100,000,000 or more in excess of Canadian products actually received by the United Kingdom, while stated exports to other overseas countries are short this amount. Again, United States' grain is routed through Canada and shipped from Montreal and is therefore frequently shown by other countries as imported from Canada, while it is included in United States statistics as an export to Canada. As mentioned above, purchases in bonded markets in England, Germany, Belgium and France are included in Canadian imports from those countries but are not included by those countries in exports to Canada.

For more detailed discussion of this subject see the article and tables on "Discrepancies in Trade Statistics" on pp. 778-781 of the Annual Report on the Trade of Canada, 1928, published by the Dominion Bureau of Statistics.

#### Subsection 1.—Historical Statistics of Canadian Trade.

A general view of the trade of Canada in the fiscal years from 1868 to 1934 is furnished in Table 1 (p. 554), giving the imports of merchandise for home consumption, dutiable and free, and the exports of Canadian and foreign produce, the total trade as here given being the aggregate of the two. Necessarily, some difficulties have been met in maintaining comparable statistics through such a length of time, one of the most serious of these arising from the different methods adopted in dealing with exports of foreign produce. For example, the shrinkage in the exports of foreign produce since 1920 has been due to change of statistical method rather than to actual diminution in value or volume of such goods exported. For the past 14 years, re-exports of foreign products from bonded warehouses have no longer been included in Canadian trade statistics either as imports or as exports, while the exports of foreign produce during this period have been composed of goods which had previously been entered as imports for home consumption. Such goods are debited to Canada when entering this country, and should be credited to Canada when re-exported.

From Table 2 it will be observed that, in most of the years from Confederation to the outbreak of the Great War, imports entered for consumption exceeded total exports, especially during the great growing period from 1904 to 1914. From 1915 to 1929, except in the fiscal year ended Mar. 31, 1921, there was an annual excess of total exports over imports entered for consumption. In the fiscal years ended Mar. 31, 1930 and 1931, however, there was an excess of imports which was changed to an excess of exports for the latest three years.

The percentage of exports to imports rose to a peak of 164.6 in 1918, owing to the exportation of war supplies, then dropped to 97.6 in 1921, rose again to a post-war high of 143.3 in 1926 and has since declined to 109.7 in 1929, 91.7 in 1930 and 90.1 in 1931, but rose to 101.6 in 1932, 118.3 in 1933 and 135.0 in 1934.

The values of coin and bullion imported and exported are shown in Table 3, the later figures including much new Canadian gold refined at the Mint. Amounts collected in export duties from 1868 to 1892, and in import duties from 1868 to 1934, together with the cost of collection expressed as a percentage of the total duties, are stated by years in Table 4. Tables 5 and 6 show, respectively, exports of Canadian produce and imports for home consumption from the United Kingdom, the United States and other countries since 1868. These figures show the overwhelming predominance of the two great English-speaking countries in our foreign trade; in the fiscal year ended Mar. 31, 1934, for example, 72.9 p.c. of our exports of domestic produce was shipped to these two countries, which, in the same year, together provided 79.1 p.c. of our imports for home consumption. Tables 7 and 8 show, respectively, by years the percentage proportions of imports from the United Kingdom and the United States to totals of dutiable and free imports since 1911, and the *ad valorem* rates of duty collected on imports from these and from all countries from 1868 to 1934. The higher rates collected on imports from the United Kingdom than on those from the United States in spite of the preferential tariff accorded British goods since 1897 is largely due to the following factors: (1) imports of alcoholic beverages, which are subject to high duties, bulk largely in imports from the United Kingdom but are negligible from the United States; (2) imports of raw materials for processing in Canada, which are free of duty, form an important part of imports from the United States; and (3) dutiable imports from the United Kingdom are largely highly manufactured goods which are subject to relatively higher rates than semi-manufactured goods for further manufacture in Canada, which form another large element of imports from the United States. This subject is treated in more detail at pp. 38-39 of the Condensed Preliminary Report on the Trade of Canada, 1934. Table 18 of this chapter shows the imports from Empire countries which entered Canada in 1934 at lower rates or free of duty under the preferential tariff.

Importations of important raw materials used in Canadian manufacturing industries are given in Table 9 for the fiscal years ended 1911 to 1934.

### Subsection 2.—General Analysis of Current Import and Export Trade.

The external trade of Canada, like that of every other country in the world, declined considerably in volume and very greatly in value in the period of falling prices following the War. Thereafter it recovered and by 1929 had reached a value greater even than in the war period. The great world-wide depression which commenced in the autumn of 1929, however, was responsible for a very great reduction in the value, and a smaller reduction in the volume, of the trade of Canada and of every other country, the total value of our merchandise trade falling steadily

from \$2,655,000,000 in the fiscal year ended Mar. 31, 1929 to \$887,000,000 in the fiscal year 1933. The fiscal year ended 1934 saw the turn of the tide with a total merchandise trade of \$1,019,000,000, further increased to \$1,173,000,000 in the calendar year 1934.

The external trade of Canada during the year ended Mar. 31, 1934, was valued at \$1,019,453,094, as compared with \$887,097,541 in 1933 and \$1,166,069,421 in 1932, showing an increase in 1934 of \$132,355,553 or 14.9 p.c. over 1933, and a decrease of \$146,616,327 or 12.6 p.c. from 1932. Imports as well as exports showed an increase in 1934 compared with the year 1933, the increase in imports amounting to \$27,414,881 or 6.7 p.c., and in exports to \$104,940,672 or 21.8 p.c. In this latest fiscal year the trade balance of the Dominion was favourable to the extent of \$151,855,844, compared with a favourable balance of \$74,330,053 in 1933, and of \$9,061,613 in 1932. If the trade in merchandise and coin and bullion are added together the trade balance with the world in the fiscal year 1934 was favourable to the extent of \$218,708,714, compared with a favourable balance of \$130,883,312 in 1933 and of \$75,101,389 in 1932. The place of these trade balances of merchandise and coin and bullion in the larger sphere of international payments is shown in Section 5 at the end of this chapter, pp. 637-639.

#### I.—SUMMARY OF CANADA'S TRADE WITH THE WORLD.

[Increase or favourable (+); decrease or unfavourable (-).]

**Statistical Tables of Current Trade.**—Tables 10 to 18 (pp. 562–627) deal with the current trade statistics of the Dominion. Tables 10 and 11 are summary tables, showing by groups our trade with the United Kingdom, the United States and all countries, by values and percentages, for the latest four fiscal years. Table 12 shows the same in detail for exports and Table 13 for imports of all important articles. Table 14 shows by main classes imports as dutiable or free and exports as of Canadian or foreign produce for the five fiscal years 1930–34. Table 15 shows imports and exports for the fiscal year ended 1934 by degree of manufacture and by origin, and Table 16 gives similar information on a classification according to purpose. Table 17 gives our imports and exports for the two latest years by ports and provinces, and Table 18 shows the values imported from different countries dutiable or free under the general, preferential and treaty rate tariffs in 1934.

### **Subsection 3.—Trade with the United Kingdom and the British Empire.**

Ever since Confederation the external trade of Canada has been carried on predominantly with one or other of the two great English-speaking countries, the United Kingdom and the United States. In the early years of the Dominion, the United Kingdom, which was then lending us capital on a considerable scale for those times, supplied us with more than half our imports, though as a customer she came second to the United States. Later on, however, partly as the result of the free trade policy of the United Kingdom and the protectionist policy of the United States, the United Kingdom became the chief market for our exports, holding that position steadily from 1890 to 1920, while in certain of the more recent years the United States has been our largest customer. This latter tendency has again been reversed, however, owing on the one hand to the increasingly restrictive tariff legislation of the United States after 1920 and to the preferences granted to Canada and other Empire countries by the United Kingdom in 1932.

As regards our imports, on the other hand, the United States, though in the beginning ranking second in supplying our wants, took first place as early as 1876 and has maintained that position steadily since about 1883, the proximity of the two countries and the increasing population on both sides of the line being largely responsible. During the Great War, when the resources of the United Kingdom were absorbed in the struggle, the percentage of Canada's imports coming from the United States rose as high as 82·3 p.c. in 1918. From 1921 to 1930 it remained fairly constant at about two-thirds, while in recent years it has declined to 54·9 p.c. in 1934. Our imports from the United Kingdom, which fell as low as 8·0 p.c. of the total in 1919, fluctuated between 15·2 p.c. and 19·0 p.c. between 1921 and 1930, but rose from 15·2 p.c. in the latter year to 24·2 p.c. in 1934. Thus in four years the United Kingdom's share of our import trade has risen from less than a sixth to nearly one-quarter. In the same period the percentage of our exports taken by the United Kingdom has risen from 25·2 to 39·3 or from one-quarter to two-fifths.

The following statement gives summary statistics of Canadian trade with the United Kingdom in the latest years. Commodity imports in 1934 showed an increase of \$18,634,709 or 21·5 p.c. as compared with 1933, while exports of Canadian products to the United Kingdom showed an increase of \$43,240,392 or 23·5 p.c.

## II.—SUMMARY OF CANADA'S TRADE WITH THE UNITED KINGDOM.

[Increase or favourable (+); decrease or unfavourable (-).]

The commodities making up Canada's export and import trade with the United Kingdom in recent years are dealt with in detail in Tables 12 and 13 of this chapter.

**Trade of Canada with the British Empire.**—Canada was the first of the British Dominions to grant a preference on goods the produce and manufacture of the United Kingdom and reciprocating British Dominions and possessions. This preference was extended by Order in Council from time to time to other portions of the British Empire until now it is applicable to practically every British Dominion and possession. In the case of Newfoundland, in addition to the preference, Canada grants free admission to fish and fish products. Australia receives special concessions under the Trade Agreement of 1931 and the British West Indies under the Agreement of 1925 referred to on p. 520. Table 18 on p. 627 shows for the latest fiscal year the imports from countries of the British Empire entering Canada either at lower rates of duty or free under the preferential tariff. The British preferential tariff enacted in 1897 has had the effect of stimulating Canada's Empire trade. When the British preference became effective in 1897 Canada's total imports from the United Kingdom amounted to only \$29,401,000, compared with imports in 1887 valued at \$44,741,000 and in 1873 at \$67,997,000, so that from 1873 to 1897 imports from the United Kingdom declined by \$38,596,000 or 56·7 p.c. After the

introduction of the British preferential tariff, the downward trend in the value of imports from the United Kingdom was reversed, but imports from the Empire were at a low level. However, during the latest four years and especially since the Ottawa Agreements, the proportion of trade with both the United Kingdom and the total British Empire has shown a distinctly upward trend, although both the volume and direction of Canada's exports vary widely with the vicissitudes of crops here and in other parts of the world. Canada's exports to Empire countries other than the United Kingdom consist very largely of manufactured products.

In the interpretation of statistics covering a long period, such as those in Statement III following, the wide fluctuations in price levels should be borne in mind. Thus the fiscal year 1896, just prior to the introduction of the British preference, marked about the close of a long period of declining prices which began in the '70's. Prices followed a rising trend from then to the last pre-war fiscal year 1914, and rose very steeply throughout the War to a peak in the fiscal year ended 1921. In the following year, prices suffered a sudden drop and then remained fairly steady until 1929, after which the recent serious decline has occurred. (See Chapter XX.) The trade of Canada with the British Empire in certain fiscal years since 1886 was as under:—

## III.—CANADA'S TRADE WITH THE BRITISH EMPIRE.

| Item and Fiscal Year. | Canadian Trade with— |                       |                       | Percentage of Total Trade with— |                       |                       |

#### Subsection 4.—Trade with the United States and other Foreign Countries.

**Trade with the United States.**—In the period immediately following Confederation the United States was Canada's chief customer, trade still following its accustomed channels in spite of the denunciation of the Reciprocity Treaty, which had expired on Mar. 17, 1866. On the other hand, we bought more from the United Kingdom than from the United States.

In the '70's, however, the proportion of our exports going to the United States, which had been over 50 p.c. in the first few years of the Dominion, declined materially, but for the most part remained at over 40 p.c. until after the enactment of the McKinley Tariff of 1890, when it fell to 35 p.c. in 1892 and as low as 27 p.c. in 1898. In the first decade of the twentieth century it averaged about 35 p.c., but fell off considerably in the war years, rising again to about 40 p.c. on the average of the nineteen-twenties.

Imports from the United States exceeded half of our total imports for the first time in the years from 1877 to 1879, while in the eighteen-eighties they were approximately equivalent to those from the United Kingdom, at from 40 to 45 p.c. from either country. By 1896, however, imports from the United States again reached half of the total, and subsequently have never fallen below that point, increasing both absolutely and relatively during the great period of expansion until 1913, when they were 65.0 p.c. of all imports. In the extraordinary circumstances of the Great War they rose as high as 82.3 p.c. in 1918, and throughout the nineteen-twenties stood at about two-thirds of the total. In the most recent year, however, to some extent as the result of the Ottawa Agreements and the premium on United States funds, the percentage of imports coming from the United States has declined to 54.9 or approximately five-ninths of the total.

*Analysis of Canada's Total Trade with the United States.*—Canada's total merchandise trade with the United States in the fiscal year 1934 was valued at \$437,538,613, compared with \$381,077,886 in 1933, and \$596,037,639 in 1932, the increase in 1934 over 1933 amounting to \$56,460,727 or 14.8 p.c., but a decrease of \$158,499,026 or 26.6 p.c. compared with 1932. Imports from the United States in 1934 were valued at \$238,187,681, in 1933 at \$232,548,055, and in 1932 at \$351,686,775, the increase in 1934 compared with 1933 amounting to \$5,639,626 or 2.4 p.c., but compared with 1932 the decrease was \$113,499,094 or 32.3 p.c. The total exports to the United States in 1934 amounted to \$199,350,932, in 1933 to \$148,529,831, and in 1932 to \$244,350,864, the increase in 1934 compared with 1933 amounting to \$50,821,099 or 34.2 p.c., while compared with 1932 the decrease was \$44,999,932 or 18.4 p.c. The domestic exports to the United States in 1934 amounted to \$194,443,139, in 1933 to \$143,160,400, and in 1932 to \$235,186,674, the increase in 1934 compared with 1933 amounting to \$51,282,739 or 35.8 p.c., but compared with 1932 the decrease was \$40,743,535 or 17.3 p.c. The trade balance with the United States has been unfavourable to Canada in each year since 1882. For the year ended Mar. 31, 1934, Canada's unfavourable merchandise trade balance with the United States totalled \$38,836,749, being less than for any fiscal year since 1901 (when it was \$36,971,065). In 1929 the unfavourable trade balance with the United States amounted to \$346,745,142, in 1930 to \$310,753,856, in 1931 to \$220,483,994, in 1932 to \$107,335,911 and in 1933 to \$84,018,224. If the trade in merchandise and coin and bullion are combined, the trade balance with the United States was unfavourable in 1934 to the extent of \$23,472,761, compared with an unfavourable balance in 1933 of \$27,443,575, and in 1932 of \$43,314,645.

## IV.—SUMMARY OF CANADA'S TRADE WITH THE UNITED STATES.

[Increase or favourable (+); decrease or unfavourable (-).]

For a more detailed treatment of the commodities making up our export and import trade with the United States, see Tables 12 and 13 of this chapter.

**Canadian Trade via the United States.**—Imports from overseas countries *via* the United States have steadily declined in recent years, especially those from the British Empire. This decrease has followed: (1) general propaganda to utilize Canadian sea and river ports; (2) additional concessions to goods imported under the preferential tariff if they come direct. Provision has been made, in trade treaties and agreements negotiated with foreign countries, that goods must be imported *via* a Canadian sea or river port in order to obtain the full benefits of special rates of duty. Between 1920 and 1934 imports *via* the United States have decreased from 9.5 p.c. to 1.85 p.c. of the total imports from overseas countries.

The proportion of exports from Canada to overseas countries going *via* the United States shows a considerable decline since 1927, the percentages for the past eight fiscal years being: 1927, 39.4; 1928, 38.7; 1929, 36.6; 1930, 33.7; 1931, 27.3; 1932, 18.7; 1933, 14.2; 1934, 14.4. The decline has thus been very marked in the latest years. Details by countries are given in Table 21 of this chapter.

**Trade with Other Foreign Countries.**—The relative changes in the positions occupied by the United States and other foreign countries in Canada's trade in various years from 1886 to 1934 are shown in Statement V below. During the War and the years immediately following, when production and exports by many European countries were curtailed, imports from the United States rose to a high proportion and were 69 p.c. in 1921, while those from other foreign countries declined. With this exception the proportion of imports from other foreign countries has remained surprisingly constant over the period of nearly half a century at about one-tenth to one-eighth of total imports. Canadian exports to the United States have fluctuated between 30 p.c. and 46 p.c. of the total, while those to other foreign countries have increased from 4.5 p.c. to as high as 24.0 p.c. in 1929, declining to 18.4 p.c. in 1934.

With further reference to the trade of Canada with countries other than the United Kingdom and the United States, attention is directed to Tables 10 to 37 (pp. 153-188) of the Condensed Preliminary Report on the Trade of Canada, 1934, published by the Bureau of Statistics. These tables show the trade of Canada in leading commodities with 84 British and foreign countries for the fiscal years 1933 and 1934.

### Subsection 5.—Geographical Distribution of Canadian Trade by Continents and Countries.

**Canadian Trade by Continents, 1934.**—In the latest fiscal year both exports of Canadian products and imports increased substantially, imports by \$27,600,000 and exports by \$105,500,000. Imports from the United Kingdom increased by \$18,700,000 and from the United States by \$5,700,000, while imports from "other Europe", "other North America" and Africa showed slight declines, and imports from South Africa, Asia and Oceania recorded minor increases. Of the increase in exports of Canadian products totalling \$105,500,000, the United Kingdom accounted for \$43,200,000, the United States for \$51,300,000, Asia for \$3,600,000, Oceania for \$5,100,000, Africa for \$4,000,000 and South America for \$1,300,000. "Other Europe" and "other North America" recorded slight declines. Details respecting Canada's trade by continents, 1929 to 1934, are given in the following statement.

**Imports from Principal Countries.**—The following statement on imports from thirty-five leading countries in 1934 shows how predominant the two great English-speaking countries are as the source of supply of Canadian imports, the United States supplying approximately 55 p.c. of all our imports, while the United Kingdom, with less than half the share of the United States in our import trade, has, nevertheless, more than ten times as large a share as Germany, ranking third. Again it is to be noted that in 1934 three British countries, India, Australia and South Africa, took fifth, sixth and seventh places, respectively, in our import trade, ranking immediately after Germany and France. These same countries twelve years earlier ranked ninth, thirtieth and forty-fourth, respectively, in supplying us with imports and the change is indicative of the growing proportion of Empire trade to total trade.

## VII.—CANADA'S IMPORTS FROM THIRTY-FIVE LEADING COUNTRIES, 1934.

NOTE.—Countries arranged in order of importance, 1934.

**Exports to Principal Countries.**—Figures in the following statement, as in the import statement, are indicative of the predominance of the United Kingdom and the United States as our customers. The third country, the Netherlands, takes from us only about 10 p.c. of the commodities taken by the United States. It may be noted that in the latest year the Netherlands and Belgium were our best customers on the continent of Europe, surpassing France and Germany in this respect, while Italy ranked only sixteenth as a customer compared with third in 1922. The relative positions of these countries are largely due, of course, to the attitudes taken by the various countries to imports of Canadian wheat, France, Germany and Italy all desiring to be independent of imported food supplies.

As among the Empire countries, the rise of British South Africa from sixteenth in 1922 to ninth in 1934 may be noted as of special significance, while Australia ranked sixth in 1934, as in 1922, and New Zealand was twelfth in 1934 as compared with thirteenth in 1922. In the Orient, Japan maintained fourth place in 1934, the same as twelve years earlier.

## VIII.—CANADA'S DOMESTIC EXPORTS TO FORTY LEADING COUNTRIES, 1934.

Note.—Countries arranged in order of importance, 1934.

**Statistical Tables of Trade by Countries.**—Statistics showing the course of import and export trade during the latest five fiscal years, by countries with which Canada carries on trade, will be found in Tables 19 (imports) and 20 (exports). Table 21 shows by countries the values and percentages of goods imported into and exported from Canada *via* the United States for the latest two fiscal years.

A series of tables showing Canadian trade in principal commodities with the leading countries with which she trades (other than the United Kingdom and the United States, which are exhaustively dealt with in Tables 12 and 13) followed Table 21 in the 1931 Year Book. These tables have since been omitted to economize space. They will be found in the Condensed Preliminary Report on the Trade of Canada 1934, (pp. 153-188). Historical tables showing our trade with leading countries in each year since Confederation, will be found on pp. 13-19 of the Annual Report of the Trade of Canada for 1934, both volumes published by, and obtainable from, the Dominion Bureau of Statistics.

### Subsection 6.—Principal Commodities Imported and Exported.

**Canada's Principal Imports.**—Statement IX, which follows, shows the long-term trend of principal commodities imported into Canada in the fiscal years 1890, 1900, 1910, 1920, 1930 and 1934, the commodities being arranged in order of importance in 1934. In the interpretation of the trends in imports shown by the figures in this statement, the effect of price changes and of fluctuations of the so-called business cycle should be kept in mind. Thus the Bureau of Statistics' index number of wholesale prices on the 1926 base was 59.3 in the calendar year 1889, 52.1 in 1899, 59.5 in 1909, 134.0 in 1919, 95.6 in 1929 and 67.1 in 1933, these calendar years approximating to the fiscal years ended 1890, 1900, 1910, 1920, 1930 and 1934. In the matter of business fluctuations, the fiscal year 1910 was influenced by the general development boom in Western Canada, 1920 was affected by the feverish activity which immediately followed the War, 1930 represented the end of the security inflation period and the beginning of the downturn, while in 1934 the effects of the depression and price decline were still being severely felt, although there was a distinct improvement as compared with 1933.

During the period of 44 years covered by the statement, great changes have occurred in the character of the leading imports, due to developments both in the industrial organization of the country and the goods consumed by the people. Thus in 1890, many present-day leading imports such as crude petroleum, automobiles and parts, artificial silk, electric apparatus, aluminium, were either non-existent or formed very insignificant items of trade. Imports of farm implements in 1890 were valued at only \$161,000 but, due to the tremendous agricultural expansion in Canada since that time, as well as to increasing mechanization of agricultural operations, imports of farm implements have grown to a large item in spite of the wide development of their manufacture within the country. On the other hand, a number of the leading imports of 1890, such as woollen goods and raw wool, sugar and products, cotton goods and raw cotton, tea, grain products and meats, have become relatively much less important as imports. Then again, there were certain leading imports in 1890, such as coal, rolling-mill products, machinery and fruits, which still remain among the chief items of imports owing to the absence of coal and high grade iron ore deposits in the central portion of Canada, where population and industry are chiefly concentrated, and to the demand for fruits which cannot be grown in Canada.

IX.—CANADA'S LEADING IMPORTS, FISCAL YEARS 1890, 1900, 1910, 1920, 1930, 1934.

Canada's Principal Exports.—Statement X, which follows, gives Canada's leading domestic exports for the fiscal years ended 1890, 1900, 1910, 1920, 1930 and 1934, arranged in descending order of importance in 1934. In the interpretation of these figures of the main commodities exported the same qualifications should

apply regarding price changes and business fluctuations as cited above in the case of imports.

Over the period of 44 years covered by the statement, the changes in Canada's exports have been very great, both in volume and in the relative importance of commodities. The great agricultural expansion of the Canadian West had scarcely begun in 1890. The leading exports then were sawmill and timber products, cheese, fish, cattle, barley, coal and furs—indicating the large dependence of Canadian production at that time upon the eastern forests, mixed-farming areas, and fisheries. Of the five leading exports in 1934 four were very unimportant in 1890. The year 1910 is the earliest year in the statement in which wheat appears as the leading export, although this first occurred in 1906. The rise of the great pulp and paper industry to a leading position has been still more recent, and similarly with regard to the production of non-ferrous metals, automobiles and rubber tires. On the other hand, exports of the products of mixed-farming operations, such as cattle, hides, cheese and butter, while showing wide fluctuations, have not expanded proportionately, and in some cases were very little or no greater in 1934 than in 1890. Much of the new agricultural area developed since 1890 has been better adapted to grain growing than to mixed-farming operations, so that, owing to the growth of population, the production of the older mixed-farming districts is to a larger extent consumed within the country. The rising importance during the past two decades of the mining and metallurgical industries producing non-ferrous metals in Canada is illustrated in this statement by the increased importance since 1910 of exports of copper, nickel, zinc, silver, lead, aluminium and platinum. Gold refined in Canada and exported as bullion is not shown in the table.

X.—CANADA'S LEADING DOMESTIC EXPORTS, FISCAL YEARS 1890, 1900, 1910, 1920, 1930, 1934

NOTE.—Commodities arranged in order of importance, 1934.

## Subsection 7.—Proportions of Trade in Raw and Manufactured Products.

The stage attained in the industrial development of a country is indicated by the character of the goods it imports and exports. In the early years of Canada's development the imports were made up chiefly of manufactured products and the exports of raw and semi-manufactured products. Since the opening of the twentieth century this has been almost reversed, a large percentage of the imports consisting of raw and semi-manufactured products for use in Canadian manufacturing industries, and the exports consisting predominantly of products which have undergone some process of manufacture. In fact, the leading manufactures of Canada are for the processing of raw materials in the production of which Canada excels, and many of these processed domestic products are marketed abroad. Furthermore, as the population of the country grows, the range of elaborated goods formerly imported which may be manufactured on a competitive basis of mass production within the country expands, so that there are now many industries in Canada, serving the domestic and even foreign markets, using imported raw materials such as rubber, cotton and sugar. Since the opening of the present century, Canada has passed through much the same stages of development in her economic life as did the United States during the last quarter of the nineteenth century, although

the trend in Canada has been more pronounced in increasing the proportion of partly and fully manufactured goods as compared with raw materials exported, rather than in increasing the proportion of raw materials compared with that of partly and fully manufactured goods imported. Since 1929, the rapid decline in commodity prices, which has affected raw materials more than manufactured goods, has tended to increase the percentages of both imports and exports of manufactures.

Statement XI shows how Canada's imports and exports, analysed into the three categories of raw materials, partly manufactured goods, and fully or chiefly manufactured goods, are distributed among the continents and leading countries of the world. The close of the analysis demonstrates that the imports into Canada from the British Empire except the United Kingdom, consist chiefly of raw and semi-manufactured products, while the exports to "other Empire" are made up mainly of fully manufactured products (81.8 p.c. in 1934).

In trade with industrialized continents, such as Europe and Asia, Canadian imports are largely manufactured goods and our exports raw materials or partly manufactured goods, while in trade with South America, Oceania, Africa and North America (if the United States be excluded) the situation is the reverse.

See also Table 15 of this chapter on this subject.

XI.—CANADA'S IMPORTS AND EXPORTS, BY CONTINENTS AND LEADING COUNTRIES, ACCORDING TO DEGREE OF MANUFACTURE, YEAR ENDED MAR. 31, 1934.

NOTE.—Values in millions of dollars. Totals for continents include trade with countries other than those specified. Figures are preliminary.

| Continent and Country.   | Imports.       |                    |                      |                    |                     |                    | Exports (Domestic). |                    |                      |                    |                     |                    |

Subsection 8.—Canada's Position in International Trade in 1933.

Canada's Position in World Trade, 1933.—In 1932 Canada, in world trade, had occupied seventh place in total trade, ninth place in imports, and fifth place in exports. In the calendar year 1933 there have been some notable changes in the relative position of certain chief trading countries of the world. The United Kingdom has moved from third position in 1932 up to second position in 1933 in

the value of exports, displacing Germany, while Canada has moved from fifth place in 1932 down to sixth place in 1933, being displaced by Belgium. For the calendar year 1933 Belgian exports exceeded those for Canada by only \$10,000,000, while for the period July-December, 1933, the exports from Canada amounted to \$325,400,000 compared with a similar trade for Belgium of \$297,700,000, so that during this period Canada occupied fifth position in export trade. In import trade Canada moved from ninth place down to eleventh place, yielding ninth place to Switzerland and tenth place to British India; while, in total trade, she moved from seventh place in 1932 down to ninth place in 1933, Japan moving from eighth place up to seventh, and Italy from ninth place into eighth place.

XII.—TRADE OF TWELVE LEADING COMMERCIAL COUNTRIES, EXPRESSED IN CANADIAN CURRENCY, CALENDAR YEAR 1933.

NOTE.—The figures in parentheses represent relative positions in 1932.

**Canada's Share in World Trade.**—Two tables on pp. 86 and 87 of the *Consolidated Preliminary Report on the Trade of Canada, 1934*, published by the Dominion Bureau of Statistics, and not reproduced here to economize space, show in values and percentages Canada's share in the imports and in the exports of the forty principal trading countries of the world for the calendar years 1913, 1922 and 1932.

Since 1913 Canada has made remarkable progress in the expansion of her export trade to the world's markets, and in supplying her requirements from all parts of the world. The first of the above-mentioned tables showing "Canada's Share in Imports of Principal Countries", indicates that, while in 1913 Canada provided only 1.95 p.c. of the total imports of these countries, in 1932 her share was 4.05 p.c.

The other side of this trade expansion is shown in the other table, "Canada's Share in Domestic Exports of Principal Countries", which indicates the increasing proportion of the exports of 40 countries taken by Canada. The exports of these countries to Canada increased from 3.39 p.c. of their total exports in 1913 to 3.53 p.c. in 1932.

More detailed information relative to Canada's position in international trade in recent years is given in the following statements dealing respectively with:—XIII, Comparison of the Trade of Twenty Principal Countries of the World, 1913 and 1933; XIV, Trade of Twenty Principal Trading Countries of the World, 1923 to 1933; XV, Per Capita Trade of Twenty Principal Countries of the World, 1923 to 1933; and XVI, Trade Balances of Twenty Principal Countries of the World, 1913, 1932 and 1933.

## XIII.—COMPARISON OF THE TRADE OF TWENTY PRINCIPAL COUNTRIES OF THE WORLD, CALENDAR YEARS 1913 AND 1933.

NOTE.—Countries arranged in order of importance of trade, 1933.

| Ranks.                       |       | Item and Country.          | Foreign Trade. |            | Increase (+) or<br>Decrease (—)<br>1933 Compared with<br>1913. |            | Trade per capita. |        |

Subsection 9.—Main Historical Tables and Tables Showing Current Trends  
in External Trade.

In this subsection are assembled, in summary form, the main tables of Canadian trade since Confederation, while the figures of trade in the latest years are given in greater detail by countries and commodities. Tables 1 to 9 inclusive are of a historical character, while Tables 10 and 11 give in summary form, and Tables 12 and 13 in detail, our exports and imports for the four latest fiscal years. In Table 14 imports are divided into dutiable and free, and exports into Canadian and foreign produce. Table 15 analyses our trade in the latest year by main groups of origin and degrees of manufacture. Table 16 classifies that trade according to purpose. Table 17 gives trade by provinces and customs ports, and Table 18 by tariffs. Tables 19 and 20 deal with our imports and exports by countries in the latest five years, while Table 21 shows the values and percentages of our imports and exports transported *via* the United States.

## AGGREGATE EXTERNAL TRADE OF CANADA 1907-34

## 1.—Aggregate External Trade of Canada, fiscal years 1868-1934.

| Fiscal Year.            | IMPORTS OF MERCHANDISE ENTERED FOR HOME CONSUMPTION. |             |               | EXPORTS OF MERCHANDISE. <sup>1</sup> |                  |               | Total of Imports for Home Consumption and Exports (Merchandise). |
